J. HODDER can spare the following from amongst his high-class Yorkshires, clear buff cock, unflighted, 25/-, clear yell cock 15/-; two cinnamon-marked buff hens 10/6 each; two clear yellow hens 8/6 each, clear buff hen, 10/6; approval, stamp.—6, Rancier-st., St. Lukes, London, E.C.

MR. DODGSON has for disposal the following high-class Yorkshires: Buff cock, near 7 inch, 12/6; two 8/6 each; yellow cock 12/6; three 10/6 each; three buff hens 6/6 each; two yellows 7/6 each; three cinnamon marks 7/6 each; no better strains obtainable.—40, Priestmen-terrace, Bradford, Yorkshire.

COWGILL'S noted Yorkshires and Norwich; having selected my breeding stock, I have some extra good stock birds for disposal in clears, ticks, or marked matched pairs from 15/- to 50/-; hens from 7/6; cocks from 10/-; approval; cash or deposit; stamp reply.—115, Washington-st., Girlington, Bradford.

WADSWORTH, champion Yorkshires. Having selected my breeding stock, I have for sale unflighted Yellow cock, 30/-; one Yellow hen, 15/-; also my unflighted Yellow cock, second prize winner at the Palace; this is a good bargain; if anyone wants some reliable birds.—Willie Wadsworth, Skelmanthorpe, Huddersfield, Yorks.

YORKSHIRES If you want to breed your own winners, call or write R. Halliday, 22, Clare-street, Shipley, Yorkshire, who breeds his own, and has a few matched pairs to spare, which have been reserved for his own use; prices reasonable; on approval; P.O. or deposit; satisfaction guaranteed, or money returned; stamp for reply.

BOOTH'S noted Yorkshires and Norwich; having selected my breeding stock, I have some extra good stock for disposal in clears, ticks, or marked; matched pairs from 12/6 to 45/-; hens from 6/6; cocks, 9/6; bred from winners; see show reports; approval; cash or deposit; stamped reply.—87, Malus-st., Haworth, via Keighley, Yorkshire.

H. LINDSAY'S champion Yorkshire. I have one of the finest stocks of Yorkshires in the country for disposal. All my own breed and bred from my winners; few grand pairs left from 12/-; splendid cocks from 7/-, grand length, type and quality; inspection invited; stamp; also some grand Norwich left cheap to clear.—288, King James-st., Walkley, Sheffield.

CHAMPION Yorkshires. L. and P.O.S., also Dulwich and Peckham cup winners. Having decided to part with all my stock, cages, &c., as quickly as possible, am prepared to accept very low prices. Long racy cocks (about a dozen over seven inches), perfect shape and full of quality; hens, full of style, grand length and quality; exceptional opportunity; cocks, from 20s.; hens, from 10s.; pairs from 25s.; worth double.—Gladwin, 62, Brockley Road, Catford, S.E.

BEST'S CHAMPION YORKSHIRES.

I have some real gems for sale; prices reasonable; must sell owing to removal.—39a, Arliss-rd., Battersea.

THE FINEST YORKS PROCURABLE.

Several really smart pairs at a most reasonable price; all my own breeding; approval.—Binns, Albert-terrace, Blackpool.

J. C. BARNES,

challenge cup winner, 1905-6-7. Having selected own breeders, can spare few grand birds, very lengthy, capital position, well on leg and feathered like wax. Reasonable approval; stamp; pairs correctly matched; all related to my winners. 189, Bungambest., Walkley, Sheffield.

HOLROYD'S YORKSHIRES,

Having selected my breeding stock, I find I have a few pairs for disposal, 12/6, 15/-, 20/- per pair; three days' approval.—43, St. Paul's-terrace, Shipley, Yorks.

YORKSHIRES, all colours, including greens, cocks, 5/-, 6/-, 7/6, 8/6, 10/- upwards; hens, 4/-, 5/-, 7/6 upwards, cold-room bred; 7 days' approval.—

SAMUEL DEAN,
6, Ashmount, Gt. Horton, Bradford

W. H. SPENCER,

after selecting my own stock, has for sale a few grand Yorkshires, properly matched, pairs related to my winners; reasonable; inspection invited; three days approval; stamp.—Palmer-rd., Wadsley Bridge, Sheffield.

Winners

AND

Stock Birds

I can sell you the **WINNERS** because I do not show them; and instead of charging you £3 or £4 each, I give you equal value at 30/- and 40/-; pairs also to produce the highest class specimens at **20/-.** Other good, well-bred specimens at following prices:

Cocks, 5/6, 6/6, 7/6, 8/6, 10/6, 15/-, 20/-, 30/-. Hens, 3/6, 4/6, 5/6, 7/6, 10/6, 15/-. Pairs Matched for Breeding, **8/6, 9/6, 10/6, 12/6, 15/-.**

All on approval. Travelling Cages, **3d.** extra.

I can give you entire satisfaction whatever price you select, that is, if satisfaction is possible, for I have a reputation at stake.

Read following as an example of the cheap pairs I sell and also see my advertisement on page 205.

Could not get such for double.

Carrigeen Dairy, Waterford. Feb. 1, 1908.—Accept my very best thanks for the lovely Yorkshire hen you sent me. I would not get one from our home fanciers for double the money. Wishing you greater success.—R. Fewer to W. Rudd.

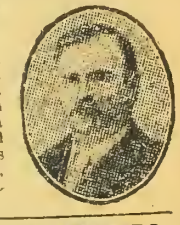
A 15s. pair of Yorkshires win 2nd and 3rd prizes.

11, Augusta Street, Victoria, near Waunllwyd, Mon. Feb. 3, 1908.—Just a few lines to inform you the birds give every satisfaction. I put them in the Ebbw Vale Show, in the Members' Class, and I got 2nd with cock, and 3rd with hen. I wish you every success. You can make use of this if you wish.—W. Colbourne to W. Rudd.

W. RUDD, THE Bird Specialist,

NORWICH.

LOOK HERE!



Could I make you a fairer offer than to send you grand, young, long, upstanding, good feathered, Yorks. Hens, clrs. or tckd. Cnmns. or grn.-mrkd., yellow or buff on approval, **4/-** each. I have also a few grandmated pairs of typical Yorks. for breeding own winners at **12/6 & 15/-** pr., all sent on appro.

JOE THOMAS, Amblerthorn

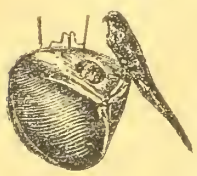
WRIGHT'S TRADING MENAGERIE

Just arrived the first consignment of 150 young African Grey Parrots, full wings and lovely red tails, in the pink of condition; dealers, hawkers', showmen, requiring stocks, should apply where there are Parrots, to save disappointment. We are the largest wholesale dealers in the world and fear no foe; note the address.—43, Park-rd., Liverpool.



To Breed Budgerigars successfully you must have the **"Improved Secure" husks** All bird fancying papers have advised their readers to prefer them, because other kinds come to pieces and the young birds fall to the floor and die and this is just why the **"Improved Secure" husks** have been **"celebrated"** for the last 16 years. They remain unequalled, competition and comparison always increase their popularity; the principal Zoo's, Parks, and breeders employ them, and "Cage Birds" has said:—"They are far superior to the old husks," so beware of worthless substitutes.

Price **4/6** dozen, smaller quantities **5d.** each. Pamphlet, entitled "Budgerigar Breeding," post free on application. Read it before buying husks. Superior box nests for Cockatiels, etc., **1/6** each.

HARPER, Upper Villiers Street, WOLVERHAMPTON

BOOKLET FREE.

Finest Talking Parrots. I only deal in Parrots that will make first-class talkers; no rubbish. I am willing at all times to send my Parrots on four weeks' trial and three months' talking guarantee. Why? Because all my Parrots are young, strong, and reliable. My lifetime has been spent among grey Parrots, both at home and abroad. I guarantee every customer every satisfaction. Grey Parrots are my special fancy. I have trained them, know their wants, and can give every purchaser a bird that will please him in every way. I can supply grey talkers, not thinkers, that will say almost anything, at reasonable prices. Before you purchase a grey or green Parrot, send for my Booklet, entitled "Talking Parrots." All my birds are sent on four weeks' trial, at my risk. Send postcard for catalogue.—Mrs. Forster, Princes Park Aviaries, Violet Street, Liverpool.

COKERNUT HUSK NESTS.

Having received a superb cargo of 35,000 Husks the largest and best I ever saw, I can dispatch all orders same day as received. Satisfaction and success are assured when you use nests of my manufacture **"The Unbreakable"** Cokernut Husk nest for Budgerigars, etc.; Small **2/-**, Med. **4/-**, Large **6/-** doz. Sample Set, carriage paid **1/3**. **The Cosy**, Cokernut Shell nest for finches, etc. Small **2/-**, Med. **4/-**, Large **6/-** doz. Sample Set **1/3**, carriage paid. **The Ideal**, Box nest for Cockatiels, Parakeets &c., **1/-**. Superior make and varnished, etc. **1/6**. Every user praises this nest box. PARROT PROBLEM

solved. For full proofs send postcard at once for my large book, "Parrot Prattle," now containing 168 pages. This is the most wonderful book ever offered free of all charge to all Parrot fanciers. (This "Parrot Prattle" is registered copyright, and all infringers and imitaters will be proceeded against). It contains hundreds of testimonials from all parts with full names and addresses, many interesting facts, and gives valuable advice and hints to all Parrot buyers. Full details of our original system of selling Parrots on four week's trial, at our risk, which we were the first to introduce. We sell Parrots of all descriptions on four weeks' trial, at our risk, before settlement. Cheapest and best in the Kingdom, and any Parrot sold by us, and not giving full satisfaction, will be exchanged any time within twelve months. Remember we lead and others try to follow. Write to other dealers as well as us, and judge for yourselves. Lists of Parrots for sale and above book post free on receipt of postcard.

Second Section: 1, Buckle; 2, Coates; 3, C. Kirby.—B. Buckle, Secretary.

ROTHERHAM C.B.S.

The annual matched pair show was held at the Star Inn, Masbro, on Feb. 15th. There were some very good birds shown. Mr. Webster, of Rotherham, judged, and his awards were very well received, doing him great credit.

YORKS. YELL.: 1, Brotherton, clear yellow, splendid Yorkie., stands on a good pair of legs, has even wings, a grand head and feathers like silk; 2, Oates, another grand bird, good back and wings, nice legs and head well up. BUFF: 1, Oates, good back and head; 2, Brotherton, real gem, close as wax, good all-round bird. PAIRS OF YORKS.: 1, Brotherton, long, yellow cock bird, close in feather and buff hen, good type, straight as a rush, well matched; 2, Bagnell, good buff cock, grand size, a good stock bird, yellow hen, very nice feather, good pair; 3, vhc, Oates, third very long, ticked yellow cock, the right sort for stock and a very good buff hen, well matched, pressing second very hard; vhc, another good pair; hc, Smith, good stock cock bird, fine length, well up on legs and a very good yellow hen. NOR. YELL.: 1, Bailey, good body and feather. BUFF: 1, Smith, good ticked hen, nice type and size, judge said was almost perfect. PAIRS: 1, 2, Bagnell, both good pairs; 3, Hayes, even size; vhc, Bailey, one of the best Norwich hens in show. MULE OR HYB. PAIRS: 1, 2, 3, Bagnell, Goldfinch and Bullie; 2, Greenfinch and Bullie; 3, Canary and Greenfinch.—W. Brotherton, Sec.

W. OF SCOTLAND N.B.M.B. & F.A.

The annual show of pairs was held on February 22nd in Good Templars' Hall, Ingram-street, Glasgow. The entry, both for quality and quantity, was very good, and gave the judge, Mr. A. Miller (Acaster-Isaac) some trouble to pick out the winners, which he did, however, to the satisfaction of all.

CREST: 1, spl, Young, Crest cock, good radiation, C.B. hen, a clinker, plenty lashing and size, grand pair; 2, 3, Henderson, two very promising pairs; 4, Andersen, good Green Crest cock and a nice C.B. hen. PLAINHEADS: 1, spl, Muir, clinking clear buff cock and yellow ticked hen, all there for type and quality; 2, 4, Hutchison, former grand pair variegated; 4th, clear cock and var. hen; 3, Young, clear buff cock and yellow hen, best hen in class; some very likely pairs kept back. BORDERS: 1, spl, 2, Young, two ideal pairs, 2nd preferred by some; 3, 4, Lappin, the Rutherglen winners, but beaten here. MULING PAIRS: 1, spl, 2, 3, 4, Muir, a good stud, headed by a large Siberian Goldie and large yellow hen; 2nd, Brit. Goldie and Sib. yellow hen; 3rd, Linnet, and extra large yellow hen; 4th, Siskin, and yellow hen, all in the pink of condition. HYBRIDS: 1, spl, Muir, big Siberian Goldie and Bullie, an easy win here; 2, Laurie, Greenie and Bullie, very good Greenie; 3, 4, Andersen, Bramble and Chaffinch and Goldie Bullie, in good condition. After the judge had placed the cards a novice judging competition was entered into, the result of which will be made known at next meeting, March 7th.

BRISTOL C.B.S.

The members held a show of matched pairs on February 15th at their headquarters, "The Crown." The quality was excellent, nearly all the winners being first-class, and were staged in fine form. The birds themselves, and the manner in which they were staged, reflected great credit upon their owners. The special for best pair went to Mr. C. E. Brown for his ticked yellow cock bird, Palace 2nd, and a smart high quality buff hen, which matched him well. The special for second best pair went to Mrs. Roberts with a pair for Crest breeding. Mr. W. H. Manley, the new hon. sec., had everything in smooth working order, and, to judge from his initial effort, we should say he will make an ideal secretary. After the completion of the judging the members sat down to a substantial meat tea. This over, a very pleasing little ceremony took place. Mr. J. H. Payne, on behalf of the members of the society, presented the retiring secretary, Mr. J. Munro, and his wife with a handsome pair of bronze figures, nicely mounted on ebony plinths. Mr. Munro, in expressing his thanks to the members for their thoughtful kindness, a kindness which would always live in his and his wife's memories, said how sorry he was that he could not carry on the secretarial duties any longer. But they knew that with his extra duties this was impossible. They could rest assured his interest in the society was as keen and as hearty as ever, and he would do whatever laid in his power to further the success of the society. Mr. J. H. Payne made the awards.

PAIRS FOR CREST BREEDING: 1, 2, Mrs. Roberts, 1st good skulled, well-feathered Crestbred cock, matched to a good frontal Crested hen of nice droop; 2nd nice-feathered Crestbred cock, not quite so wide in skull as winner, and the hen beaten only in length of frontal crest. NOR., YELL. CK. AND BUFF HEN: 1, 4, vhc, c, C. E. Brown, thigh ticked cock, grand colour and quality, nice shape with a good head and neck, well matched to a good, short flighted, and tailed hen of good quality and shape, a useful pair; 4th, cock good in quality and feather, hen rich in undercolour and nice shape; 2, 3, vhc, Tristem, second, Palace fourth prize cock, a bird of wonderful colour, feather, and quality, his mate has a deep, nicely-rounded chest and full neck, good in colour and quality; 3rd, nice-coloured cock with good head, hen fine shape, wide shoulders, and full neck, well-matched pair; hc, Roberts. BUFF COCK, YELL. HEN: 1, 3, 4, vhc, hc, c, C. E. Brown, grand team, all well matched put down in good order, well-known wing tick leading, matched to a nice, shapely, good quality hen. YORKS. YELL. COCK AND BUFF HEN: 1, 2, Keegan, well known head and shoulder marked cock leading, matched to a nice natural-coloured hen of good feather and style; 2nd, rare nice pair of natural colours; 3rd, Stonelake, slim built cock, hen good in length and position; vhc, Haynes. BUFF COCK AND YELL. HEN: 1, Stonelake, nice-positioned cock, good colour, well-packed flights and tail, hen good length, narrow shoulders and nice feather, useful pair; 2, A. C. Brown, cock hot colour, well up on leg, hen slim and leggy, with good whip tail; 3, Keegan, similar pair and close up; 4, Haynes. NOVICE NOR.: 1, 3, Quarman, deep-coloured and good-shaped yellow cock, matched to a nice natural coloured hen of good shape and feather; 2, Fowler, nice hen, good shape, rich undercolour, good feather. YORKS.: 1, spl, A. C. Brown, nicely-balanced and useful pair; 2, 3, Burgess, smart style and close in feather. PAIRS FOR MULE BREEDING: 1, Bussey. FOR HYBRID BREEDING: 1, Haynes, good cock Goldfinch and nice hen Green linch, both in good feather; 2, Barry, clinking Bramblefinch, nice colour and spangling, hen Chaffinch in good feather; 3, Clark, Greenfinch cock, and nice-feathered and shapely Bullfinch hen. SELL.: 1, 2, Tristem.

DARLINGTON C. AND B.B.F.A.

The members held their annual show of matched pairs of birds for breeding purposes at the George Hotel on February 19th. Mr. T. Hill (Thornaby) placed the cards, which were well received. Owing to the stormy day some of our members did not put in an appearance with their birds as intended, and 21 pairs of birds faced the judge.

YORKS. PAIRS: 1, Cuthbertson; 2, Wilcock; 3, Metcalfe; vhc, Mrs. Cuthbertson; hc, c, Black. NOR PAIRS: 1, Cuthbertson; 2, Mrs. Cuthbertson; 3, vhc, Oliver; hc, c, O'Connor. A.O.V. CAN.: 1, Wilcock; 2, Black. PAIRS FOR MULE BREEDING: 1, 2, Metcalfe.

WIBSEY AND DIS. C.B.S.

The Society held the second members' show of the year on February 15. Mr. J. Hodgson had 73 birds staged, and he placed the cards to the general satisfaction of all members.

YORKS. CL. YELL. CK.: 1, 3, Chapman and Bateman; 2, Ormondroyd; 4, Bastow; vhc, he, Crowther; c, Taylor Bros. BUFF: 1, Crowther; 2, Taylor Bros.; 3, Mann; 4, Bastow; vhc, Hardaker; he, Sutcliffe; c, Ketteringham. TICK., ETC., YELL. CK.: 1, Thornton; 2, Norton; 3, Johnson; 4, Beamont; vhc, Crowther; he, Chapman and Bateman; c, Sutcliffe. BUFF: 1, Chapman and Bateman; 2, 4, Stott; 3, Dilman; vhc, Taylor Bros.; hc, Mann; c, Thornton. FOUL MARKED CK.: 1, Taylor Bros.; 2, Ormondroyd. CL., ETC., YELL. HEN: 1, 2, Hardaker; 3, Taylor Bros.; 4, Bastow; vhc, Bairstow and Chapman; hc, Stott; c, Johnson. BUFF: 1, 3, Taylor Bros.; 2, Hardaker; 4, Bairstow and Chapman; vhc, Johnson; he, Bastow; c, Lawson. UNEVEN, ETC., HEN: 1, 4, vhc, Sutcliffe; 2, Taylor Bros.; 3, Norton; hc, Thornton; c, Wright. YORKS. STOCK BIRD: 1, Hardaker; 2, Ketteringham; 3, Crowther; 4, Thornton; vhc, Shaw; hc, Ormondroyd; c, Mann. Messrs. Bairstow and Chapman won box of cigars for best vhc bird with a yellow hen.—E. W. Johnson.

REIGATE F.A.

The members held a first and most successful show of pairs matched for breeding on February 17th at Mutton's Temperance Hotel, Redhill. The society is practically only in its infancy, but it has had an experience which bids fair to develop into a very substantial one. About 40 pairs were staged, and the quality generally bore every indication that the members are on the pathway to success at future shows elsewhere than in Redhill. A nicer collection of Plainhead Norwich pairs one could hardly wish to see. Yorkshires were fairly good, and there were some good Lancashires and a pair or two of Lizards. Muling and hybrid pairs were very good. The birds throughout were in rattling feather, and showed well in view of the rapidly-approaching breeding season. Mr. A. J. Kilby won the cup with a spanking pair of Norwich, well matched, and equally well shown. The hon. secretary, Mr. A. W. Bacon, had everything in readiness for the judge. Mr. Geo. Gardner, at the appointed time, and his earnestness and method would be hard to eclipse; the society possesses a first-rate secretary, and one and all seemed to appreciate his labours. At the close of the judging, Mr. Gardner gave a short address to a crowded assembly of members upon the exhibits, and what to aim at generally in breeding. A hearty vote of thanks to Mr. Gardner closed a very pleasant evening.

NOR. (8): , 3, r, vhc, he, c, spl and cup, Kilby; 2, Cosier and Crisp. YORKS. (9): 1, 3, vhc, spl, Tillett; 2, c, Green; r, Stamford; he, Weller. A.O.V. CAN (3): 1, 2, 3, spl, Green. BRIT. AND CAN. FOR MULING (8): 1, 3, spl, Green; 2, Bacon; r, Hannant; vhc, he, Lawrence. BRIT. FOR BREEDING HYBRIDS (6): 1, spl, Gallard; 2, r, Mitchell; 3, vhc, Powell. SELL. (no limit) (6): 1, spl, 3, hc, Green; 2, r, Kilby; vhc, Stamford.

BOLTON AND DIS. O.S.

A very successful table show for matched pairs for breeding purposes was held at headquarters, the Joiners' Arms Hotel, Deansgate, Bolton, on Feb. 19th. In the four classes provided 35 grand pairs were staged. Crests were a level lot, whilst the Norwich and Yorkshire classes brought together some magnificent pairs, competition being keen in both classes. Some grand birds were left without cards. The Mule and Hybrid class contained some nice pairs, the birds being in grand condition. Mr. J. Stringer, the sec., had the arrangements well in hand and deserves every credit. Mr. Albert Grundy, one of the oldest members of the society, was the judge, and his awards were very favourably received.

CREST (7): 1, vhc, Stringer, leaders variegated Crest cock and yellow green Crestbred hen, crest, nice and round, good leggy feather, C.B. good skull and feather, nice substance, very fine pair; 2, vhc, Laidlow; second grey crested cock and variegated Crestbred hen, both good size and substance, fine feather; 3, J. Smith, Crestbred cock and variegated crested hen, a good pair C.B., fine head and feather, crest centre, well placed, nice radiation and droop; c, Simms. NOR. (15): 1, 2, 3, J. and J. Hopkins, first variegated yellow cock and clear buff hen; second clear buff cock and tick yellow hen; third variegated nat. col. yellow cock and clear buff nat. col. hen; vhc, J. Smith, buff cock, good size, grand head, neck and chest, and a fine quality yellow hen; hc, Cooper, grand coloured yellow cock and an extra light feathered, grand typed buff hen; c, Parkinson, yellow cock, grand colour and quality buff hen, good type and carriage. YORKS. (9): 1, 2, Brooks, two grand pairs, leaders yellow cock and buff hen, good length and quality, nice back, wings and tail; second buff cock and yellow hen, again grand length and quality; 3, Hollis, variegated, yellow cock, good length and colour, grand position and style and a smart buff hen, good quality and type; vhc, he, S. Smith; hc, J. Smith. MULE, ETC., PAIRS (4): 1, Gerrard, Goldfinch cock grand blaze, colour and condition, and a smart Bullfinch hen; 2, J. Smith, another Goldfinch cock and Bullfinch hen; 3, Stringer, Goldfinch cock and Crestbred hen.

Kindly announce that my address after this week, writes Mr. Ambrose Baldry, will be "Pretoria," 50, Blackhorse-rd., Walthamstow.

Report of novice Yorkshire classes at Queen's Park Show, writes Mr. H. R. Lowe (Queen's Park) should read:—2, vhc, c, Lowe and not Rowe.

The schedule for the Vale of Conway and Dis. F.A.'s forthcoming members' show will be ready shortly, writes Mr. A. T. Johnson, the Secretary.

Price list and testimonials reach us from Mr. J. Broxup, of 8, Pendle Street, Burnley, and judging by the latter customers receive complete satisfaction.

I was elected Secretary at the annual meeting of the Tamworth and Dis. C.B.S. in place of Mr. Brown, who declined to stand, writes Mr. G. E. Spencer (Wilnecote).

The City and Suburban A.C.B.'s year book for 1908 reaches us from the secretary, Mr. Wynn, and we notice an excellent programme for the season has been arranged.

Will Mrs. B. Hills, of St. Albans-rd., Kensington, let me know the number of her road, writes Mr. John Martin (Castle Douglas), and I will send the reply requested.

Mr. Thomas Smith writes that he has removed from 446, Victoria-road, to 56, Minard-road, Crossmyloof, Glasgow, and asks fanciers to kindly note the new address.

Kindly state that I had so many replies to my advertisement in CAGE BIRDS last week, writes Mr. T. Johnson (Southport), I could only reply to those who enclosed a stamp.

Mr. H. Thomas (Middleton) informs us that he has taken over the secretarial duties of the Middleton O.S. from Mr. R. Cowherd, who has had to retire through pressure of other work.

The Wolverhampton and District C.B.S., writes Mr. F. Howes, the secretary, have altered their show date to October 29th and 30th, and have engaged Mr. J. Robson to judge.

My committee have fixed October 15th and 16th as the date of the next "Royal" Leamington F.A. annual show, writes Mr. F. T. Pritchard (Leamington Spa), and have re-elected me secretary.

We are holding our Pair Show on Feb. 29th, at the Bush Hotel, Shepherd's Bush, writes Mr. H. Dewhurst, Secretary of the West London F.A. Also our smoking concert on March 5th.

In connection with the Hartlepool's prize drawing, owing to the books not being returned in time, writes Mr. E. Woodhead, the Sec., it is impossible to advertise the winning numbers until March 7th.

Kindly thank all those who replied to my advertisement in CAGE BIRDS, re Norwich Hens, writes Mr. J. Dimes (Hanworth). I had so many offers, I could not reply to them all. I had letters from all over the kingdom.

The judges for the South Shields C.B.S. Show, to be held on October 30th and 31st, writes Mr. Wm. Duke, the Sec., are Messrs. H. W. Battye (Huddersfield), E. Brunskill (Darlington), and J. Shepherd (Newcastle).

I have bought new and commodious premises at 112, Cape Hill, Smethwick, Birmingham, writes Mr. H. Morris, the well-known seed merchant and bird dealer, and all letters should be addressed there in future, instead of to No. 57.

Will the gentleman at Lowestoft who wrote me an enquiry re Norwich Plainheads on Feb. 14th last, kindly forward me his address again, writes Mr. J. Hodder (St. Luke's, E.C.), as unfortunately in the rush of business I have mislaid his address.

Owing to the death of my wife, I am compelled to remove from 157, Leonard-road, Birches Head, Hanley, writes Mr. J. Simcock, Sec. of the Potteries and Dis. C.B.A., and in future my address will be 63, Fenton-road, Hanley.

We are holding our Annual Pair Show writes Mr. J. A. Tyler, Sec. Leicester C.B.S., this Saturday (Feb. 29), at headquarters, the "Hare and Pheasant" Hotel, High Street, open at 4 p.m., and shall be pleased to welcome fanciers.

We hear from Messrs. Barker and Turner, joint secretaries of the Long Eaton and District C.B.S., that the first annual open show will be held on November 28th and 30th, under Cage Bird Union rules. Judges, Messrs. J. Robson and J. H. Roe.

A table show of pairs matched for breeding will be held on March 3rd, at headquarters, the White Swan Hotel, writes Mr. Chas. Draper, Sec. of the Leicester and Leicestershire Hand-in-Hand C.B.S., when Mr. E. Noakes will judge.

Kindly thank all who replied to my advt. in CAGE BIRDS, writes Mr. A. Goodall (Leeds). I was surprised at the number who did so. I could not possibly reply to all. CAGE BIRDS affords very interesting reading even if one has no birds he cares to know about.

Our Pair Show, I am pleased to say, was a financial success, writes Mr. J. C. Birch, Sec. Queen's Park and Dis. C.B.A. With a large number of tickets not yet paid for, we still have a balance of a few shillings in hand, and the whole of the prize-money has been paid.

Will Secretaries of Specialist Clubs desirous of holding their Club shows on the date of the Northampton Good Intent's fixture, viz., October 21st and 22nd next, writes Mr. G. M. Larkman, the secretary, kindly communicate with me at 210, Wellingboro-road, Northampton?

I must express my admiration for your paper, writes Mr. W. North, of Shadwell, near Leeds. I have taken one or other of your contemporaries for twenty years, but have only just come across CAGE BIRDS, and am delighted with it. I intend to take it weekly for the future.

Many thanks for the beautiful plate along with your excellent Palace number, writes Mr. Thos. Robson (Newcastle-on-Tyne). Really we bird men have a lot to be thankful for since you took our hobby in hand. I consider the plate the best work of art you have given us up to date.

My last week's advt. is another to be added to the long list of successful adverts. in CAGE BIRDS, writes Mr. C. R. Phillips (Wood Green) and I would like you to convey to all who answered it the fact that I was unable to reply to all, as the goods advertised were disposed of on the same day.

A grand concert, promoted by the Civil Service Fanciers' Association, takes place this Saturday (February 29th) at the "Talbot" Restaurant, 64, London Wall, E.C., when a splendid programme has been arranged and an enjoyable evening assured. All fanciers and friends (ladies especially) are cordially invited.

A splendid lot of testimonials concerning the merits of "Avisine" reaches us from the proprietors. All are of recent date, and speak eloquently of the benefits the writers' birds have received from this medicine, which is fast making a name in birdy circles. The names of many well-known fanciers appear at foot of the letters.

OBITUARY.

MR. JAMES SAMUEL (Musselburgh).

It is with the deepest regret that I have to announce to your wide circle of readers the sudden death of Mr. James Samuel, of Musselburgh, on February 22nd, aged 62 years, writes Mr. A. M. Gardiner (Newton Grange). He was well known among the Fancy, and was an enthusiastic supporter of all the local clubs. I am sure all fanciers in the district will join me in sympathy with the widow.

MR. DAVID HALL (Brixton).

All southern Yorkshire fanciers will hear with deep regret of the death of Mr. David Hall, of 134, Branksome-road, Brixton, writes Mr. H. Hillier (Southgate), for no truer and more sportsman-like fancier ever lived. He was only in his glory when trying to tell or show a novice how to breed a Yorkie. A great many South Londoners especially will miss him, if only for his kindly advice on how to pair up their stock or to wash and get a bird ready for the show bench, which he was only too willing to give at all times. Although suffering from a sad affliction for the past 13 years (which prevented him doing more than he did do for the Yorkshire Fancy) he only took to his bed with an attack of influenza and bronchitis on February 20th. He passed away on 21st February in his 37th year. His many friends will join me in deeply sympathising with his family in their bereavement. I hope they will do their utmost to help his sister to dispose of his valuable stock of birds.

Mr. G. J. Warley (Brixton) also sends a sympathetic letter.

I have sold all my birds which were advertised for sale in CAGE BIRDS, writes Mr. A. M. Firth (Leeds) and our house has been like a fair, people coming as late as 10 o'clock on Sunday. If there are many more letters coming, I shall have spent no inconsiderable amount returning postal orders sent for the birds, not to mention other enquiries. Your paper, CAGE BIRDS, has a large circulation.

At the meeting of the London and Counties A.C.B., at "The Bay Malton," Great Portland Street, W., on March 2nd, at 8.30 p.m., a lecture will be delivered by Mr. A. Silver, writes Mr. J. Pretty, the hon. sec. Fanciers and others are cordially invited. I would also like to remind those interested, of our British Bird Show this Saturday, also at the "Bay Malton."

If any exhibitor at our last show has not received his or her special prize, writes Mr. B. Kirke, secretary of the Tonbridge and District F.A., if they will communicate with me I will see the matter settled. I wish your paper every success, and am doing my best to introduce it to the Cage Bird Fancy of our Association. I have been a constant reader for the last four years.

The February issue of "Bird Notes" constitutes the completion of the 6th volume of this well-conducted journal. As usual it affords interesting reading. Mr. R. Suggitt has some notes on nesting experiences during 1907 and Capt. G. A. Perreau continues his reminiscences of bird collecting and a shopping visit to Calcutta dealers. Mr. Wesley T. Page, F.Z.S., the Editor, concludes his series of articles on "Feeding and Acclimatising Foreign Birds." The frontispiece consists of a photograph of two Moustache Parrakeets and is accompanied by explanatory notes by Mr. Page. Other features include "Nesting Notes" by Mrs. H. Bromet, and some notes by the Editor on Golden-crowned Conures, a photograph of specimens of which forms an excellent full-page plate. The usual indices to the volume are also included with this issue.

Cage Birds Annual

— For 1908 —

The Standard Guide to the Fancy, and Yearly Treat for all Bird-lovers.

A charming new cover, many beautiful illustrations of winning birds printed on art paper, a lovely coloured plate for frontispiece, a complete revision of all the popular features, and the addition of strikingly useful new features, mark this 1908 issue.

The articles, too, have never been excelled, and both Canary, Hybrid, British and Foreign bird keepers have been specially catered for. The needs of the beginner have likewise been given the fullest consideration. Many extra pages have been added, and

the "ANNUAL" for 1908 is

A Marvellous Sixpenny-worth

—absolutely the best ever put before the Fancy.

Although it has been on sale but a few days, letters of appreciation from delighted purchasers are already rolling in.

READ THE FOLLOWING:

The CAGE BIRDS ANNUAL to hand is a marvel. I don't know how you have printed it for the money. Enclosed you will find postal order for 7d. for another book, my brother-in-law wanting the one I had.—W. Pollard (Accrington).

Thanks for sending me "The good old ANNUAL." This is now my sixth "Annual" and is splendid. The coloured plate of the Bramble Chaffinch Hybrid is lovely and any of your readers who is without a copy is not an up-to-date fancier.—J. Osborne (Sligo).

Permit me to thank you for my CAGE BIRDS ANNUAL, which I have just received, and which I think much better than ever before, and a book that ought to be in every bird lover's hands, young or old, male or female. I feel sure, with this ANNUAL and a copy of CAGE BIRDS weekly, one cannot go far wrong in the Fancy. Wishing your paper every success. —F. Wyse (Mayfair, W.).

Bird-lovers should hurry up and secure their copies at once.

Order it RIGHT AWAY, however, as the edition is limited in number and we anticipate a record quick sale.

SIXPENCE FROM ALL NEWSAGENTS

ALL OVER THE WORLD IT

IS NOW ON SALE

Our Yorkshire Canary Competition.

The Result.

In our last Birthday Number it will be remembered that we published a plate entitled "Half-a-dozen Ordinary Yorkshires," and that among these six birds were hidden certain parts which, if cut out and pasted together, would make one good exhibition specimen. A prize of 10s. 6d. was offered to the reader who could solve this puzzle, and in the event of two or more being correct, the neatest attempt was to take the prize.

We have to announce that this competition proved a huge success, several thousand readers finding amusement, and no doubt food for thought, in attempting to build up this exhibition bird from out the "duffers." Scrutiny of the attempts sent in has thus been a lengthy and difficult task, and it is only with this issue that we are able to announce the winner. The competitor adjudged entitled to the half-guinea prize is—

MR. FRED HAMMOND,
70, St. Margaret's Road,
Bradford, Yorks.

It is certainly not a little curious (and not a little fitting, readers will doubtless agree) that the secretary of the Yorkshire Union of Ornithological Societies should prove the winner in this competition. His attempt was absolutely correct in every particular according to the "key" sent us after the date of the competition closing by our artist, Mr. Norman. Mr. Norman states that the exhibition bird (as shown on his key plan) was intended to be made up as follows :—

Beak from No. 2; Head and eye from No. 6; Back and wings from No. 4; Tail from No. 1; Throat to tail (i.e., the front of the bird) from No. 3; Legs from No. 5.

Two other competitors, viz., Mrs. W. Fisher, 9, Wood Street, Lancaster, and Mr. H. C. Brooks, 90, Station Road, Horsham, Sussex, also succeeded in unearthing, so to speak, the correct parts, but for neatness their pasted-up birds were beaten by that sent in by Mr. Hammond. These three correct attemps, we may say, lie at our office, and may be inspected by any interested person who cares to call to view them.

Other competitors who came very near the mark were Miss Nellie Watson (Ballycarry), Messrs. A. W. White (Farnham), C. Ogden (Stockton-on-Tees), George Laurence (Halstead), F. G. Joiner (Portsmouth), W. H. Uzzell (Birmingham), E. Baggaley (Mansfield), W. Golby (Birmingham), and H. Wood (Cambridge). Some selected the wrong beaks, others divided the legs, and so got one or the other wrong—all were very nearly accurate. The majority of the competitors seem to be lovers of a marked bird, for an enormous number made up a four-marked or a two-marked bird.

In conclusion, we would draw readers' attention to our two competitions on similar lines concerning the Norwich Plainhead Canary. See plate on page 145 of our issue for February 15, and the particulars on page 153 (also repeated on page 214 this week).

An astonishing batch of testimonials reaches us from that world-renowned bird specialist, Mr. W. Rudd, of Norwich—astonishing because their number is enormous, and because all have been sent to him (as the post-marks bear witness) during the present month of February. We never saw anything like it before, and understand from Mr. Rudd that even this huge batch does not include the many testimonials published by him during the month in the advertisement columns of the Fancy Press.

The annual dinner and social in connection with the Green Canary Association is due to be held on Tuesday next, March 3, in the Milbourn Assembly Rooms, 15, St. Anne-st., Liverpool. A good programme, to be followed by a dance, has been arranged, and the presentation of prizes will take place also. Friends are invited. An enjoyable evening is always assured at this dinner, tickets for which, 2s 6d. each, may be had from the secretaries, Messrs. S. Hadwin (28, Pembroke Place), or A. Thompson (205, Smithdown Lane).

Perhaps, Perhaps Not.

The Cuckoo was heard on the morning of the 20th inst., at Bentley, near Brentwood, writes Mr. E. D. Hutchinson, of Bentley Mill, to a daily contemporary.

Combined Meet in Bradford.

Kindly announce, writes Mr. John Greaves, secretary of the Y.C.C., that the joint presentation of prizes for the Yorkshire C.C., the C.M.Y.C.C., the Yorkshire Union, and the Bradford British Bird and Mule Club will take place at the Market Tavern, Godwin-street, Bradford, on Saturday evening, March 7th, at 6 p.m. prompt. A grand concert will be arranged by an influential committee, the chair to be occupied by Mr. D. Sunderland. An hearty invitation to be present is given to all fanciers and friends. We hope an enjoyable evening will be passed, and it is expected that a record number will attend, as this is a unique meeting in respect to the Fancy. We beg all prize-winners to be in attendance personally as far as possible.

SHOW DATES FIXED.

To secure insertion in this column a guarantee that the show will be advertised in "C.B." to the extent of at least 25/- must be sent to our manager.

* Under the Rules of the C.B. Union.

The first pair stock show in connection with the Lewisham and District C.B.S. will be held on March 3rd, writes Mr. H. Thos. Lucas, the hon. secretary, when Mr. J. Robson will judge.

I find that Newcastle are holding their show on the same date as we had finally selected, writes Mr. Ernest Woodhead, sec of the Hartlepools C.B.S., and as we have no desire to clash, we are compelled to fall back on our old date, viz., Dec. 4 and 5. The lethargic C.B.U. have given notice to the effect that there would be a meeting called to arrange fixtures for the several districts, but it has ended there so far as I know.

I would like to thank all fanciers who assisted me with the sale of tickets on behalf of the widow and family of the late John McKenzie (Stirling), writes Mr. Hugh Moreland (Falkirk); also the President of the Falkirk and District Cage Bird Society with the other members who so kindly assisted with the drawing. The tickets sold well, and we are able to hand over to the widow a tidy sum. I would also thank the Committee of the Bannockburn Show for remitting back the entry fees which he had paid for their show, but at which he did not live to exhibit; it was very generous of them.

North-West London, Note.

Fanciers in the Highgate, Hampstead, and neighbouring districts should not overlook the meeting being held this Friday evening (Feb. 28), in the Spencer Hall, Spencer Road, Dartmouth Park Hill, N.W., at 8 p.m., for the purpose of forming a new society for these districts. All will be welcomed.

Standard Show Cage for British Birds.

In our "Twittering" column last week we referred to the proposed adoption of a standard show cage for British Hardbills, by the N.B.B. and M.C., and mentioned that the Club was prepared to consider suitable cages sent in by any cage-maker. From the secretaries' report published in this issue we note that the last day for receiving the said cages is March 14th, and the address they should be sent to, The British Bird and Mule Club, "The Napier," 25, High Holborn, London, W.C.

Norwich Plainhead Club.

I am revising the names and addresses of the members of the Norwich Plainhead Club, writes Mr. J. Raynes, the Secretary, 9, Richmond-rd., Chorlton-cum-Hardy, and should be glad if all who wish to join would send on their names by return of post, and if any member has removed during the last year, will they please send on their address, so that all may be included in the new book? All members who have been written to for their subscriptions and have not paid, will be struck off according to rule, unless sent per return. The voting papers have been sent off.

CLUB NOTICES.

One notice of any forthcoming Society meeting inserted free. It should reach us by Tuesday morning's post. Specially printed Club Notice Postcard may be had free on application to our Manager. Secretaries should always use them.

Ayr and Dist. C.B.C.—March 9th, Good Templar Hall, 7.30. Rules, etc. All fanciers wishing to join please attend.—C. Irvine.

Hetton-le-Hole and Dist. C.B.S.—Feb. 29, Crown Inn, at 7. Business important. Any fancier residing within five miles invited to join.—A. J. Notley.

Hyson Green and Dist. C.B.S.—Mar. 6. Annual general meeting, Cricket Players, Lindsay Street, Nottingham.—A. E. Garton.

Kent County C.B.A. — Mar. 11, Engineer Inn, Dover, 8.15. Alteration of rules, etc.—G. Sanderson.

Leicester C.B.S.—Feb. 29, Annual Show of Pairs matched for breeding. Open 4.—J. A. Tyler.

Leicester and Leicestershire Hand-in-Hand C.B.S. —Mar. 3, Headquarters, White Swan Hotel, 8. Table Show; pairs matched for breeding, Norwich. Class 1, open; class 2, amateur; class 3, novice. Judge, Mr. E. Noakes.—C. Draper.

L. and L.F.A.—Mar. 7, White Lion Hotel, Corporation Street, Manchester, 6. General meeting, balance sheet and report.—H. Oliver.

Larkhall C.B.C.—Mar. 7, Miners' Hall, 7. Business and entries close for Canary Singing Competition.—G. Kirk.

Longton and Dist. C.B.S.—Mar. 3, Castle Inn, High Street, Longton, 8. Mr. E. Tams will read a Paper on "How I bred my Hybrids." All fanciers invited.—T. J. Siers.

Lowestoft and Dist. C.B.S.—Mar. 2, Fox and Hounds, 7. Table Show, Norwich P.H. cocks; Champion and Novice Classes. H. Hart, judge; all heartily invited.—W. Nichols.

Lewisham and Dist. C.B.S.—Mar. 3, Roebuck Hotel, Lewisham, 8. Pair Stock Show. Fanciers and friends welcome.—H. T. Lucas.

Leyton and Dist. C.B.A.—Mar. 2, Headquarters, 8. British Bird Show. Judge, Mr. J. T. Clark. Fanciers invited.—B. J. Forse.

Musselburgh O.S.—Feb. 29, McDonald's Rooms, 7. General meeting; approval of rules, etc. All fanciers invited.—D. Kay.

M. and N.C.O.S.—Mar. 2, Deansgate Hotel, 7.45. Sharp practice debate.—E. H. Jones.

Newcastle-upon-Tyne C.B.S.—Mar. 5, Lockhart's, Grainger Street, 7.30. A trip to the Scottish National, by Mr. Currah.—Curry and Hutchinson.

Newport, (Mon.) C.B.S.—Mar. 5, Plimsoll Arms, Corn Street, Newport, Mon. Pair Show. Judges, Messrs. Simmonds and Allen. Members' Birds only. —W. H. Barnes.

Otley and Dist. O.S.—Mar. 3, Queen's Head Hotel, 8. Fixing date for F. F. Show, and selection of judge for same. Fanciers welcomed.—W. Dawson.

Ormskirk and Dist. C.B.S.—Mar. 2, Headquarters, 8. Annual meeting and Pair Show.—T. H. Tiffen.

Porth and Dist. C.B.F.S.—Mar. 7, Danis Temperance Bar, Hannah Street, Porth, 7.30. Business of importance.—R. G. Challenger.

Pudsey, Stanningley and Dist. O.S.—Mar. 4, Oddfellows' Hall, 8. Washing Competition. All fanciers invited.—J. Butler.

Potteries and Dist. C.B.A.—Mar. 7, Red Lion, Stoke-on-Trent, 8. Federation of shows in Potteries; very important.—J. Simcock.

Queen's Park and Dist. C.B.A.—Mar. 5, Emmanuel Hall, Harrow Road, W., 8. Lecture by Mr. C. A. House. Subject: "The Bird Room." Visitors cordially invited.—J. C. Birch.

Rochdale O.C.—Mar. 4, Club Rooms, 7.30. Discussion, "Management of Canaries." — J. Butterworth.

Rochdale Good Intent C.B.S.—Mar. 4, Temperance Club, 8. Extempore speaking.—S. M. Calyton.

Sheffield and Dist. C.B.S.—Mar. 5, Wentworth Cafe, 8. Lecture on Matched Pairs for Hybrid Breeding, by a friend.—Lindsay and Bingham.

Shipley O.S.—Mar. 3, Victoria Hotel, 8. Important business.—H. Dobson.

Shields C.B.S.—Mar. 4, Griggs' Cafe, Long Yale Lane, 7.30. Business important.—W. Duke.

Spen Valley C.B.S.—Mar. 2, Commercial Hotel, Cleckheaton, 8. Members' Pair Show, etc.—R. Bennett.

Seaham Harbour and Dist. C.B.B.A.—Mar. 6. Station Hotel, 7 o'clock. Important meeting.—J. M. Nicholson.

Scottish National C.B.S.—Feb. 29, Rooms, 142, High Street, Edinburgh, 5.30. Financial statement, election of office bearers, etc.—J. Winter.

Scottish B.B. and M.C.—Mar. 7, 142, High Street, Edinburgh, 4. Annual meeting; presentation of medals, etc.; new members invited.—R. Farmer.

Stockton-on-Tees and Dist. C.B.S.—Mar. 5, Leeds Hotel, 8. Election of judges for Open Show.—J. W. Lowes.

Sunderland C.B.S.—Feb. 29th, Fawcett Street Cafe, 7.30. Voting for Hall and judges; do not forget Table Show, also advertisements for Papers, and bring friends.—F. W. Gordon.

Walthamstow F.A.—Mar. 12, Headquarters, 8. All members kindly pay subscriptions and ticket money if not already done so. Secretary is resigning and wishes to clear all up, and give new sec. a clean start.—C. W. Mead.

Widnes and Dist. O.S.—Mar. 5, Grosvenor Hotel, 7.30. Fixing dates and arranging schedule for Old Show, etc.—S. Andrews.

Wallasey and Dist. C.B.S.—Mar. 5, St. Mary's Schools, Liscard, 8. Discussion, "How to get Birds into Breeding Condition."—Wm. Mallinson.

Wath and Dist. C.B.A.—Mar. 1, Cross Keys Hotel, 7.30. General business.—H. A. Watson.

Weston-super-Mare C.B.S.—Mar. 3, Star Coffee House, 8. Fixing date of Annual Show; appointment of judges, etc.—G. W. Read.

Wimbledon and Dist.—Mar. 2, 6, The Broadway, 8. Members' Pair Show. Remarks by Mr. J. Rouson.—H. Smith.

At a special meeting of the Bolton Ornithological Society, held last Monday, we hear it was decided that the "partnership" existing between this Society and the Bolton Roller Society should be dissolved, and that the Society should in future be called simply the "Bolton Ornithological Society." We understand that the Roller Fanciers will form a society of their own.

The second monthly table show of the Huddersfield O. S. was held at the White Hart Hotel, writes Mr. W. L. Brier, Assistant Sec., and resulted as follows: Cinnamons marked Yellow Yorkshire Hen, 1 Lawford and Son, 2 W. H. Waring, 3, W. Miller. Ditto Buff, 1 Miller, 2, F. Hepworth, 3, W. H. Waring. Ticked etc. Buff Norwich Hen, 1, Lawford, 2, W. Miller; Judge Mr. R. Clague.

QUESTIONS & ANSWERS

DOUBTS AND DIFFICULTIES SOLVED BY SPECIALISTS.

(1)—All questions must be clearly written in ink (or typewritten) on one side only of paper, and must conclude with either the correct name of querist, or a pseudonym, or initials.

(2)—The proper name and address in full of querist must always be written on a separate sheet of paper and enclosed with the query. In no case must the address appear on the query.

(3)—Queries intended for different specialists must not be written on the same sheet of paper.

(4)—Queries must not include or be included in orders for books, instructions re advertisements, or any other matter for publication.

(5)—The department to which the queries refer must be stated in bold letters on the left-hand corner of the query.

(6)—If an answer in the same week's issue is desired, queries must be posted to reach us by **Monday's first post** *at latest. Queries will be dealt with in the order in which they are received, and only as space permits. The earlier queries are received the better attention they are likely to have.*

(7)—Queries relating to illnesses of birds, except enquiries as to cause of death (for which see Post Mortems), will be answered by return of post on receipt of a postal order for sixpence and an addressed stamped envelope. Queries of an ordinary nature will be answered by post, if desired, on receipt of a postal order for one shilling and a stamped addressed envelope.

(8)—All who require letters of complaint written to advertisers must state grounds for doing so clearly and fully, and enclose a fee of sixpence to pay postage expenses, &c., otherwise their letters will not receive attention.

(9)—All queries must be addressed **the Editor, "Cage Birds," 154,** *Fleet Street, London, E.C. Only queries so sent will be answered. Postcards are not admissible.*

Queries will be answered under the following conditions:—

NOTE.—Readers are requested to carefully study past numbers and current issue before submitting questions. By doing so they may save trouble and unnecessary repetition.

THE following gentlemen represent CAGE BIRDS staff of **ADVISORY EXPERTS.** Queries must in no case be addressed to any of them individually, but to the Editor.

Canaries.—**Claude St. John.** British Birds, Mules and Hybrids—**G. E. Weston.** Foreign Birds—**Wesley T. Page,** F.Z.S., M.B.N.R.S., &c., Parks and Lake Aviculture **Frank Finn,** B.A., F.Z.S. M.B.O.U., &c. Wild Bird Life—**H. Norman.**

NOTE.—If an answer is required concerning the proper mating, etc. of Norwich, Yorkshires, Crests, Cinnamons, Greens, Borders, Lizards, Scotch or any other variety of the Canary family, we shall, should the querist desire us to do so, be pleased to submit his question for answer to some leading specialist of the day on the variety concerned.

CANARY QUERIES.

Answered by CLAUDE ST. JOHN.

We Three.

C.G.B.—1. If you are sure there are not draughts or red mites troubling this hen, its condition is due to over-feeding, and as your diet is far too generous the latter suspicion is probably correct. You say you have tried all sorts of remedies with no success. Very well; now try this for a month or so. Plain Canary only as a staple diet; plenty of green food daily; once a week a pinch of dry rape seed, and once a week half a teaspoonful of egg-food. Discontinue all the other items you have been giving entirely. In the drinking water give as much Epsom salts as will cover a sixpence every third day, and at the end of each week give twenty drops of chemical food. After the first fortnight give the chemical food twice a week. Unless there are draughts, or your kitchen is very cold at night, there is no necessity to cover its cage over at night. 2. It all depends upon how the parents were bred as to whether it would be best to breed with a prize-winning bird bred off inferior parents or an inferior bird bred off prize-winning parents. It is a big question, which may be dealt with on our "Novices' Notebook" page all in good time. 3. No; I do not think you need defer commencing breeding until May, because you are moving in that month. If the birds are in good condition and ready to mate in a month or so, I should pair them. With ordinary care the removal can be effected without seriously interfering with the breeding operations.

Time to Move Birds.

Mrs. B.—The best time to move the birds from a warm kitchen to a cold room will be when the average temperature outside rises to somewhere about fifty-five degrees—probably towards the end of April or beginning of May.

Off Song.

Poor Joey.—You will help the bird to regain his song considerably if you give it a small piece of sponge cake slightly moistened with sherry twice a week, and every second day for a week or so add twelve drops of glycerine and six of aromatic sulphuric acid to its drinking water. Give a spray of watercress or other green food each day, and occasionally a few grains of hemp seed instead of the maw you are giving. When it has got its voice fairly strong stop giving the sponge cake and substitute a small piece of bread dipped in milk and sprinkled with soft sugar.

Norwich in Poor Condition.

Goldfinch.—In addition to your present diet give the bird a small piece of bread and milk once a week, and upon this drop four or five drops of cod liver oil—the emulsionised oil preferably—also mix four drops of the oil with the egg food. Give a teaspoonful of scalded rape once a week also. In the drinking water give first, for one day, as much Epsom salts as will cover a sixpence, and afterwards twenty drops of chemical food one day, and six of aromatic sulphuric acid the next, and continue to give these alternately for a week or fortnight according to the amount of improvement you find. This, if the bird seems fairly well after the first week discontinue the treatment then. The sample of canary seed, although it is a little unequal in size, is a very good sample.

Breeding in Outdoor Aviary.

E.P.—See reply to "Notts," in last issue for remarks as to number of nest-boxes to provide when breeding with groups flying loose. You should provide eight or ten nests for your five hens, and it would be most advisable to fix them up in the covered shed portion of your aviary, choosing a fairly well-lighted position for each nest, and not placing them close together. Also be careful that the places chosen are quite free from draughts at all times, and also dry. 2.—Neither of the plants you mention is likely to harm the birds, but the reverse will scarcely hold good, as the birds will probably make short work of them. The elder probably lasts longer than any other named, as the birds will not eat its greenery, but it is soon made very unsightly with their droppings, unless planted in pots so that it can be brought out at intervals and washed with a syringe. 3.—See also reply to "Notts," about removing the young. 4.—As regards placing the birds in the aviary, much depends upon whether they have previously been kept outdoors. If they have you may put out the hens at the beginning of April, and introduce the cocks two or three weeks later. But if they have not been out before, the end of April or beginning of May would be quite early enough for safety.

Deformed Toe: Seed Samples.

Crest.—You can do nothing to cure the deformed toe now. It should have been attended to immediately after it first became deformed. You might try gently rubbing it two or three times a week with a little olive oil as recommended to another querist this week. The Canary seed sent is of poor quality, and is small and thin. The rape also is not of the best. It looks fairly good, but has such an uncommonly strong flavour that I doubt the justice of its claims to the name.

Squeaky Norwich.

W. Andrews, Brockley.—Discontinue giving niga seed altogether and give instead a small piece of bread dipped in milk and sprinkled with soft sugar once a week. Give ten drops of glycerine and five each of oxymel of squills and paregoric in the drinking water every second day for a week, and then give twenty drops of chemical food every second day for another week. See that the bird is not exposed to chills, and if it is a vigorous bather make its bath slightly tepid until the weather is milder.

Crossing London Fancies.

"Spangles."—I am afraid you are mistaken in thinking you have seen crossed advised for improving the Fancies. The chief object of crossing with another breed is rather to obtain material to work with, which is all too scarce in a variety that has so long been verging upon extinction, or to avoid too long and close in-breeding. In your case I should pair the London Fancies together this year, and mate a silver Lizard, as much over-capped as you like, with the Norwich hen. The latter should be a clear yellow, and I should prefer it to come from a marked strain. The most promising hens from these cross-breds may be used to breed with the young pure-bred cocks, and the old cock should be mated to a young pure bred—that is, provided they are both perfectly sound and healthy, otherwise this close in-breeding is a trifle risky. Should the cross-breds produce a cock at all approaching the type of the London Fancy, it may be as well to take a brood of young from it paired to the old pure-bred hen, to mate back in the next year to the first-cross birds and keep up a supply of useful material to dip into occasionally, when necessary, to obtain fresh blood. But on the whole the cock of the first cross will be best disposed of for songsters, unless you had got a larger stock of Fancies, when some of them might be retained for mating back to the Norwich. One cross, however, should be enough to last you a few years.

Moulting Yorkshire.

Wilson.—The bird is probably exposed to draughts or to great fluctuations of temperature. Perhaps your kitchen is very warm by day and correspondingly cold at night. This would account for the hen's condition. If any of these causes are present they must be removed before you can expect a cure. Stop giving the mixed seed altogether and give a small piece of sponge cake slightly moistened with sherry twice a week instead. For one week give twenty drops of whiskey, ten of glycerine, and five of paregoric in the water one day; next day six drops of tincture of steel; and pure water on the third day, then repeat it over again. The second week give twenty drops of chemical food every second day.

Roller Ceased Singing.

"Nancy."—It is difficult to account for your bird going off song quite suddenly and yet keeping apparently in the best health and condition. Are you quite sure it did not get a chill which has caused loss of voice? In that case it would have shown some indisposition for a day or two at least, and you would probably see it going through the motions of singing without making any sound. Or did it get a sudden fright about the time? I have known this stop a bird singing in this way. The introduction of a cat where one had not been kept before might occasion such a shock. Your feeding is not bad, but try dropping the mixed seed, and substituting a small piece of sponge cake moistened with sherry once a week, and in the drinking water give twenty drops of whiskey and five each of oxymel of squills and sweet spirits of nitre every second day for a week. If this does not do good write again and say whether any of the suggested causes is likely to be correct. I surmise you looked after red mite at night. They are too cutely stowed away by day to be seen unless forced to quit their haunts.

Crossing Strains.

Yorkshire Cross.—Having bought a matched pair from a breeder you now want to know if you would do right by mating the cock with one of your own hens which you think will suit him, and then ask how long it will be before you saw the effect of crossing. In the first place this depends upon what you mean by a well-known breeder. If you mean a private breeder and exhibitor who has a good strain of his own, and you paid a fair price to have a properly-matched pair of birds, you would probably make a mistake in changing the hen for one of your own in spite of the fact that you think she will suit him, as the breeder has both the advantage of knowing how the birds are bred, how they throw young, and also the knowledge gained from experience. On the other hand, if you mean a dealer who advertises matched pairs, then it is doubtful whether the pair as sent are of the same strain, so there would be less inducement for adhering to the matched pair as bought than in the other case. The result when it is seen is the only sure test as to the soundness of your judgment in making the suggested change. You could not fully judge of the result until the young were matured next season. But why not run the cock alternately with both the hens. I would strongly advise you to do this, as you will then have a very practical object-lesson, and be able to see the result of your own judgment and the breeder's from whom you bought the matched pair side by side.

Aspect and Size of Cages.

New Beginner.—I should advise you to keep the bird on the side which has the benefit of the morning sun from the time it rises until getting towards midday. No, your cages are not too large for breeding a pair in each, if you have enough of them, and space to keep them in. Although they are quite as large as the usual double compartment breeding cage, the extra size is an advantage rather than otherwise. It is always best to have them a little larger than the regulation size wherever it can be managed, rather than smaller.

Constituents of Cereals.

Inquisitive.—After looking up several analytical lists I will not take the responsibility of saying what cereals are similar in constituents to Canary seed, by which you doubtless mean have similar proportions of the same constituents. All cereals must possess practically the same constituents. It is the proportions of each that vary. In the lists of different authorities even such an element as water which one would expect to show a constituent figure, the proportion varies as much as 3.3. Taken all round, wheat, barley and maize seem to come rather near it, but this must only be taken as a suggestion.

To Distinguish Buff.

"Bert."—This is getting an old friend, but in this case it is scarcely so easy to describe for you to understand how to tell a buff self green. I should advise you to visit a stud of greens, and get the owner, or a fancier friend, to show you the differences on given birds. This would be of far more value to you if you are about breeding greens than columns of print. The question about Redpoll will be answered by Mr. Weston next week. It should have been on a separate sheet.

Advice about Breeding.

J. Tarrant.—According to your description of the birds, they are far from being in a fit condition to breed with at present, even if it were time to begin breeding, which it is not. When a bird's tail beats time to its breathing as it sits on the perches it tells one of two things generally—either the bird is in an overfed condition, or it has contracted a cold which makes its breathing difficult. As you remark about your birds having good appetites it is probably the former in your case. Feed them as we are constantly advising for a general diet, give a spray of green food daily, adding a little Epsom salts to the drinking water three times a week for two or three weeks, and on the two first occasions add twenty drops of whiskey as well as the salts. See they are kept from draughts and chills, and are free from red mites. Then if they roost comfortably without wagging their tails all the time, and appear in good health, you may try your luck with breeding at the end of March. Do not be disappointed if they fail, however, as they are not the most promising material. But you will do well to stick to the commonest birds for this year, in order to gain a little experience. There is no means of telling the age of the birds, except that coarse scaly feet, and long over-grown claws are indications of age.

The Case of Inga.

F. O. Lermarchand.—The opinions of authorities differ diametrically upon the use of inga. In the two cases you draw attention to it may be said that both are right and both are wrong. In the first place to condemn it utterly is to be ignorant of its proper use, as it is most certainly of great service when properly used. It is very useful to give a pinch occasionally as a kind of pick-me-up stimulant and conditioner, and if a half-teaspoonful is given to the hens twice a week during the first three months of the year, egg-binding will be almost unknown. On the other hand, to advise indiscriminately anyone to "give plenty of inga" is equally mischievous, and likely to cause far more harm than good. It should not form part of the regular diet, and it should not be used plentifully. For occasional use in small quantities as mentioned above it is very useful. The seed mixture for Canaries about which you enquire, would be much better if the linseed was omitted altogether and its place taken by an extra quarter pint of rape. See Mr. Weston's column next week for advice about Finch mixture. See list of books published every week in this paper.

How to Breed.

"One In Doubt."—As you say you want to breed from the two Goldfinches, and have besides ten cock Canaries and only seven hens, you have about twice as many cocks as you need. As you are also short of cages I should advise you to mate the Finches with a hen each in cages after taking a nest of young from each with a cock Canary. The other five hens and two of the cocks I should let fly loose to breed in the room you mention, and then you could either dispose of the remaining eight cocks or procure extra hens for them, and put them up in the cages you have. The advantages of this kind of free breeding were dealt with on the "Novices' Notebook" page only last week. You would only need to give the usual egg food regularly after young began to appear. There is less need to vary it for different ages of young when breeding in this way, as the old birds having more liberty and flying exercise have active digestive powers, and are quite able to feed the young on seed, as many of them will do.

Good-looking Songsters.

"Silliw."—Yes, you would succeed in your theory in getting a better looking bird than the Roller, and a softer singer than the Norwich by crossing the two breeds. For a beginning I should certainly advise you to discard the Buff Norwich hens, and obtain a lightly-ticked yellow, with plenty of natural colour. If bred from double-y lines, or not far removed from green blood, so much the better. Pair this with the Roller cock. Then mate the Roller hen from a good singing strain with a variegated yellow cock. In this case also see that the cock has plenty of deep natural colour, not that which has been fed into it. Take away the Norwich cock as soon as breeding is over. Or, better still, if there are other birds in the room remove the young as soon as they get able to do for themselves, and keep them separately where the cocks will have the benefit of hearing only a good soft-singing Roller. Whilst they are under tuition keep the cages lightly covered over. Next season pair the young among themselves, except the one that is most full of colour, which you may pair to Roller cock for mating with the young cross-breds the following year. In this way you may gradually get together a stock of really good-looking birds, with about three-fourths of pure Roller blood in their veins, and which, if kept under tuition properly when young will be a very considerable improvement on the ear-piercing shrieking of a lusty Norwich.

Cinnamon Green Not Singing.

F.A.H.—With an entire lack of data to go upon I cannot even guess if anything is wrong with the bird. You may be feeding it incorrectly. Look up advice given to "Monarch, Manchester," in last week's issue, and see if you are feeding the bird on the lines given there. If not, do so for a fortnight or so, and if bird is not beginning to sing by that time, write again and give us some particulars as to how the bird has been fed, where it is kept, and so forth. Have you carefully examined its cage for red mite?

Yorkshire Canary.

G.H.H.—If you have been feeding for weeks past as you are now doing, it would partly account for the bird's dropping into moult, though I expect a chill is the chief cause. By the way, you do not mention whether it moulted properly last autumn or not. Keep the bird warm, and give tepid baths, instead of icy cold ones. See it is not exposed to draught. Continue staple diet you are now giving, and add a small piece of bread and milk twice a week, a spray of green food daily, or, as a substitute, a piece of sweet juicy fruit. Give a pinch of the mixed seed twice a week only. In making this mixed seed you should decrease the amount of linseed and maw by at least one-half of each. In the drinking water give first for one day, twelve drops of syrup of buckthorn, and afterwards give twenty drops of chemical food every second day for a fortnight. The bird may be quite ready for breeding by the beginning of April. But do not try mating him until he has fully got over the moult and is in full song again. As regards the seeds you send, the Canary, though bright and sweet, is extremely small and rather thin, and can only be classed as poor quality. The rape, also, is poor stuff, being very unequal in size and colour, and having a large number of shrunken grains. In the mixture the hemp and maw appear to be good, the others just fair. It contains a lot of dirt.

Crippled Foot.

"Jalla."—There is no reason at all why you should not try to breed with the Yorkshire cock which had a slipped hind toe when young, and which lost the power of gripping the perch with that foot some time after the toe had been cured. If it is in good health and song the worst to be anticipated from the foot is in its indirectly being responsible for some infertile eggs. This you can prevent to a great extent by providing it with good sized perches of a flattened oval shape so as to give the bird more security of footing. Also give a nest box or pan with a fairly broad rim, and see that the perches are placed in convenient positions. You might try the effect of gently rubbing the bird's foot for a minute or two twice a week with a little olive oil.

All the Particulars.

Nathaniel Pollin, Island Magee.—"Whew! It's a mighty job I have foreinst me, begorra." You ask me for "all the particulars about breeding Canaries," blissfully unconscious probably of the awkward fact that several complete issues of CAGE BIRDS would be insufficient to contain them. Under the circumstances I should advise you to get one or two of the handbooks published at this office. "House's Manual," and "Canary Breeding for Beginners," are the best from a general standpoint, and you will see several others on the published list which deal with special breeds. You should begin to give the cocks a little extra food at once, and begin with the hens in about a fortnight. Pair up about a month hence as the birds become fit.

Hen Eating Feathers.

Novice II.—I suspect this hen has some disease of the ovary and will not do much more good. You should not have mated her, as that will not improve matters. Give her tepid baths daily in which a few crystals of permanganate of potash have been dissolved, give a little sweet juicy fruit, such as grape or orange, daily, a pinch of linseed every second day, and, if you have them, two mealworms each day; otherwise give a small cube of fat boiled bacon in the wires. In the drinking water give as much chlorate of potash as will cover a sixpence, and smear the bare places slightly with carbolised vaseline.

To tell the Sex.

H.S.—If your young birds have not yet sung I am afraid you will be disappointed in thinking they must be cocks. Healthy young cocks should be singing long before this. In general appearance the cocks are bolder, and more defiant and swaggering when you go near the cage, and the "tweet" is more shrill and metallic. If you catch them now and blow aside the feathers of the abdomen you will find the vent of the cock is more prominent and pointed, and with a slight curve inwards; whilst that of the hen is flatter, more expansive, and almost level with the abdomen. The "tweet" of the hen is more harsh and croaky.

Going in Consumption.

R. W. Tittler, West Ham.—No fear on that score, R. W. Canaries enjoy the blessed privilege of being able to snap their fingers, to use a simile, at that dread disease. It is being fed to the condition of a *foie gras*, that's all. Give him six drops of syrup of buckthorn in the drinking water every second day for a week, and afterwards give a dose twice a week, and alternate it with a dose of twenty drops of chemical food, which give twice a week also. Give plenty of green food. You must also wean it of the habit of subsisting almost entirely upon egg food. Give plain canary seed as a staple diet, a pinch of rape twice a week, a small teaspoonful of egg food once a week only, and a small piece of bread and milk once a week. Stop the maw, niga, and all other extras entirely. If the bird refuses to eat seed at first give just a morsel of egg or bread and milk to keep it going on starvation diet, as it were, and it will soon take to seed and green food.

More Seed Samples.

W.A.W.—No. 1 Canary is rather small and thin, and unevenly coloured, as though two samples were mixed together. It is, however, very sweet, and bright and clean, so that there is only its small size against it. No. 2 canary is very small indeed; otherwise it is practically the same as No. 1. No. 3 niga, is also thin and rusty coloured, and was probably badly ripened—a poor sample. No. 4 maw, is very fair quality, though not quite the best. It contains a good number of grains of dark grey seed.

Better Fed than is Good.

Winton.—I think this is what troubles the bird. See reply "C.G.B." in this issue and treat your bird as there advised in first part of query.

That Troublesome Egg-food.

W. J. Pring.—Of course you could, if you wished, give your birds a morning meal of fresh egg food before you left home for business, and leave instructions for your girl to give the other meals of a prepared food. But the question is whether the birds would take kindly to this arrangement. There would be no harm in trying it. At the same time would it not be just as easy for you to teach the girl how to prepare the egg food properly, and get her to make it up fresh at the appointed time and serve it, instead of falling back upon prepared foods. It would be very little more trouble and one object-lesson would suffice for any girl. They have deft fingers for the work and form invaluable deputy-feeders

BRITISH BIRDS, MULES AND HYBRIDS.

Answered by C. E. Weston.

A Mixture.

J P.A. (Llansamlet).—1: You don't say what the bird is whose song you are afraid of spoiling by breeding with him at the age of only 12 months. Assuming it to be a Canary, I can assure you that mating him for breeding will not affect his voice. He may sing all the harder at the beginning of the breeding season, then drop off when the youngsters appear. But that is all; he will sing just as much afterwards. 2: Many cock Linnets (probably the majority, in fact) will not accept two wives in one season. If your own bird, however, fills the eggs of two hens all right, there is no reason for not letting him do so. 3: If by "acrobatic tricks" you mean "twirling over" backwards until he falls off the perch, then there is no cure. 4: Parcgoric elixir is good for colds.

Another Mixture.

H.W.—Budgerigars might agree with the Finches you name, but sometimes they are found to turn aggressive and attack and mutilate weaker birds. You might try two pairs, certainly, keeping your eye on them. Shell gravel, or proper sand, is sold by all bird shops, and you can buy it in quantity from many firms advertising in our columns; look over the latter carefully. Builders' sharp sand (not the very fine sand) is very good as a bottom dressing for aviary floors, giving a top dressing of a good gritty shell gravel. There is nothing in your letter to afford me the slightest clue as to the cause of the death of your birds. Are you sure they are not molested in the night? The only other explanation is that some infectious complaint is rife amongst the birds; but only a post-mortem examination could determine this with certainty. Why not send a body along to our Mr. North? Jack daws, Jays, and Magpies will agree together providing you give them plenty of elbow room. Don't, of course, try keeping them with smaller species.

Feeding Linnet—Canary Couples.

Newcastle.—If you want to keep the two birds together, the best stock mixture you can use is: Canary and teazle, one and a half pints each; summer rape and charlock, half a pint each. Then make up three mixtures as follows:—(a) Hemp, two parts; niger, one part; linseed, half a part by measure; (b) maw, thistle, dandelion, gold of pleasure, and lettuce equal parts of each, likewise by measure; (c) a good wild seed mixture. A heaping teaspoonful of one of these three mixtures should be given the birds every day (in a separate vessel; not with the stock mixture), taking them in turn. This treatment will bring them into the best possible condition, providing the birds are in good health, and are being kept under proper conditions. Egg bread should not be given yet awhile (unless your Linnet is very near breeding condition, which you can tell by his song and the colour of his beak), as it will only bring your hen to nest before the Linnet is fit. All the early, young, tender dandelion leaves you can find should be gathered (likewise shepherd's purse and chickweed), and a good feed be given the birds daily. If they don't breed under this treatment, they will never breed at all. I expect "Annual" has reached you, ere this.

Goldfinch Ailing.

Wall Golde.—It is a critical period of the year to have a Goldfinch turn "queer," and you may have difficulty in pulling him round. Give him maw, niger, teazle, and lightly-cracked hemp freely every day (prepare the latter fresh daily). Also try him with thistle and dandelion seeds. For medicine get an ounce of sulphate of soda from a chemist, and dissolve as much as will lie on a shilling in two tablespoonfuls of drinking water. Leave this in cage six hours, then replace with plain water. Next day give another dose of sulphate of soda, but only use as much as will lie on a sixpence. Repeat this twice, after day intervals on plain water. This will most likely restore him to health. As soon as you see any young dandelion leaves, gather him a feed daily.

Bullfinch Eggs Already.

J. E. C.—It certainly is very early for Bullfinch hens to be laying eggs the second week in February. If they are fertile they certainly ought to be successfully hatched by the Border hen which commenced to sit on February 13. I have had hens sit a week or more over the usual time; they seem to know when the eggs under them contain chicks. But I must point out that you are very wrong indeed in assuming that because you many times saw the act of copulation take place between the cock Linnet and hen Bullie the eggs of the latter are certain to be fertile. If that said act ensured full eggs, then Hybrids would be very, very common. If young should hatch, offer, in addition to the usual seeds, plenty of lightly cracked hemp seeds, and plenty of well-made egg-food. Also provide a liberal daily supply of rape seedlings, grown as detailed in another reply this week. When chickweed and shepherd's purse are available, these should be freely given. By-the-bye, the cracked egg you speak of is practically certain not to hatch, even though fertilised.

About a Thrush.

S.B.E.—1: Is a cock Song Thrush worth keeping? Well, you must decide that for yourself. Personally, I think a Thrush well-fed and properly caged and attended to a most delightful pet, and a charming free singer. Why you should imagine Thrushes were "scarce" I don't know. They are plentiful all over the country—many gardeners would like, they say, to see them thinned out a bit. 2: The cage should be box pattern (wired at front only), not less than 28 or 30 inches long, 18 high, and 12 from back to front. Have the food and water vessels outside, and two perches, one low down at one end of the cage, the other high up at the other end. The bird will go on the bottom of the cage to feed. The sand-tray must be kept clean, and the bird should be allowed daily opportunity for bathing in suitable weather. 3: The feeding was dealt with at length by me in our issue for February 1st last. Briefly, a suitable good insectivorous mixture (make your own, or buy through our advertisement columns), moistened with cold boiled potato, chopped green food, etc., fruit, and berries according to season, mealworms and other live insects, also according to season. Note also, article appearing in this week's issue. 4: Keep indoors (in a cold room) during stormy inclement weather, but hang in a safe spot outdoors during genial weather. Have the cage well protected both from the sun and from showers.

Loss of Feathers.

E. Hendrie.—Either you have the birds infested with red-mite (a condition of things many people fail to discover), or else you have been feeding the birds too exclusively on dry, stimulating seeds, probably at the same time keeping them in a heated atmosphere. You can discover the former by noting whether the birds are restless at night, and continually picking, more or less violently, amongst their plumage; also if you throw a folded white cloth over their cages in the evening, removal and examination next morning will reveal some of the very tiny red pests secreted amongst its folds. For treatment see the lengthy paragraph on "Parasites" in Cage Birds Annual. If you are keeping the birds in an over-heated room, and giving only dry seed, the remedy is obvious. But the feathers will quite likely not be renewed until the next moult comes round. The week before last I dealt at length with the proper feeding of Linnets. Suitable green-food for winter use can always be grown indoors. A little summer rape sown in wet sand (kept well damp) will very quickly produce a crop of tender shoots, and these are relished by most birds. Cut them off with a pair of scissors, like the well-known "mustard and cress."

Encyclopædic.

Ruby.—A nice name, so I'll forgive you the brain-rackers propounded for my benefit (1) Plasmon powder may be broadly called "concentrated milk." It is the nutritive elements of milk in powder form—the water, of which milk is very largely composed, has been taken away, and the nutritive properties only remain behind. Hence, Plasmon is concentrated food. This powder, added to articles of diet, increases their "feeding" value. It is, too, easily digestible. Of course, it must only be used in certain quantities; (2) Yes; arrowroot biscuits can be used for softbills. I know a fancier who does use them for the smaller insectivorous birds. Have myself given them to young Canaries and young Mules, but never regularly used them for insectivorous birds, so can't speak from personal experience; (3) I have several times quite recently had occasion to eulogise German hen Canaries (Roller hens) as excellent foster-mothers for young Hybrids; (4) Bullfinch Hybrids, like all others, need to be colour-fed for present-day competition; (5) I have no real knowledge as to the reason a class for Foreign-Hybrids did not appear in the schedule of the last Crystal Palace Show (taking your word for it there was not such a one). I should say the class has proved a loss in the past (I hope the show manager will not be too hard on me if I am wrong.)

Half-a-dozen about Muling.

Novelist.—Most Goldfinches will live mainly on hemp, niger, and teazle, when they can get them, some taking a little linseed and canary as well. If a bird chooses to live and thrive on even one kind of seed, there is no call to worry. With my own Goldies, I simply sieve the contents of their seed-troughs periodically, and make up any deficiency of whatever seed or seeds they have consumed most of. Coming to your half-a-dozen questions: (1) Seeing you have a pink-eyed Yorkshire hen already, you could not do better than get a young yellow Lancashire Plainhead hen for the Goldie's second wife. Really good ones are somewhat expensive, however. I use one Finch with 4 or 5 hens if I so please. Three-compartment cages are splendid for Muling, if their bulkiness is no obstacle: (2), Don't let the birds run together until the middle of March, then give them the usual Goldfinch mixture. No niger in it, however; give separately in small quantities only; (3) Answered partly in No. 2. It is usual for the hen Canary to be ready before the Finches, hence most Mule breeders have a round of Canaries before trying the latter. You should try to keep the hens backward by feeding plainly, and not mating up until a late date; (4), This seems a never-failing source of anxiety to beginners. I can assure you that when once paired up, no "high diet" will affect the hen Canary. The sweat and labour of building a home, laying eggs, and rearing a family, afford all-sufficient counteracting agents to the "high living." Don't worry on this score; (5) Taboo open cages. Three-compartment, wired at front only, and with both solid and wired dividing slides, will suit you admirably; (6), The point beginners generally go wrong over is in fussing and "messing about" their birds too much. Take the famous advice: "Don't." Pleased to answer any questions; but as a busy man I implore you to cut 'em short.

Recipe for Making Birdlime.

T. C. M. Hockiby.—I have never made bird-lime myself, having always bought what I wanted for use. I don't like it, however, and should now never use bird-lime except under special circumstances. The following recipe was given some time back by one of our correspondents—still, like him, I prefer netting birds to liming them. Take one pint of best raw linseed oil, put into an old quart saucepan, put on the fire and simmer gently for three or four hours. On no account let it boil; stir every few minutes. No change will be noticed until after the second hour, then it will show froth on top, this being a sign of thickening. It must be given every attention or it will boil over. When it gets about as thick as treacle take it off the fire and pour into a pan of cold water; stand till cool, then work it up with the hands till it shows no signs of having water in it. This will be found to work on twigs quite easily. It can be taken off when not in use, and used over and over again. If too stiff, mix with it a little of the so-called "treacle." Boiling will thicken it if needed. Made properly this will hold anything from a Wren to a Blackbird. An outhouse is more suitable for the boiling purpose than the kitchen, as the preparation has a very sickly odour.

Goldfinches and a Linnet.

Scotland. — Many hen Linnets show very good "whites" in wing and tail. Is your bird a nice warm brown colour on back and wing butts (shoulders)? If so, it is a cock. Feed as advised "Newcastle" this week, and if a male it should soon sing. Stoutly built (Norwich type) yellow hen Canaries cannot be improved upon for breeding good-shaped, fine-coloured Mules, either Linnet or Goldfinch. For dark Mules, get marked hens. The moulted Goldie which is now singing hard would be best to breed from. Give the other two a small teaspoonful daily of this mixture: Equal parts maw, niger, thistle, dandelion and sesame seeds. If cocks, and steady, this will soon bring them into high condition and song.

Brevities.

Wild Seeds (F. J. W.).—I think the sample of "special" mixture for British Finches that you send is excellent. I could not say anything about its value per pound, however, as I buy my own seed by measure, and not by weight.

Sex of Redpoll (Rob).—Your friend who states that all Redpolls with bibs are hens, tells me something I never knew before. I should like to show him one with a bib that has fertilized eggs, also several more with bibs that I'll wager are cocks. It is very difficult to sex house-moulted Redpolls; if your bird sings freely you can be certain it is a male. In wild plumage (adult) the males have the breast suffused with crimson, whereas the hens have not.

Linnets for Muling (J. L. Horsforth).—Concerning the feeding of Linnets for Muling, note reply to "Newcastle" this week. As you don't tell me what seeds you give the Canaries, I really can't tell you whether they are suitable for the Linnets—can I? A timely dose of sulphate of soda will often pull a "queer" bird round.

"Uses" for Mules (W.W.).—The only "use" a cock Mule can boast—if not an exhibition bird—is that he is a fine free songster and hardy cage pet. The hens have no "use" at all (except, breathe it low, to be sold as cocks to the unwary by the unscrupulous). True, they can be utilised as "foster-mothers"; but neither cock nor hen Mules will themselves breed, i.e., produce fertile eggs.

Place on the head (C. Melhuish).—Take a little Zambuk on the tip of a finger and gently rub it on the place twice daily—night and morning. I don't think for one moment the trouble will affect the general health of the Thrush.

Removing cock Bullfinches (Novice).—Certainly; you will find it far the best plan to remove the cock Bullfinches out of sight and hearing of the hen Bullies you pair up for Hybrid breeding. If you do not, you are likely to have trouble—as I found to my own cost one year. Your cages are a fine size, yet they might be higher, seeing how lengthy they are.

Thrush Unwell (G. S. N.).—Hempseed and bread crumbs are no food for a Thrush, as I only too frequently have to tell querists, and until you feed the bird more correctly and generously you cannot look for improvement in its condition. See reply to "S. B. E." this week. Give it mealworms more frequently, and get it a few "blackbeetles" in addition. After you have got the bird a fresh stock food, buy a small bottle of Parrish's chemical food from the chemist, and mix four or five spots of this amongst it daily, gradually increasing the quantity to 10 drops. Keep this up for a fortnight or three weeks, and vast improvement should ensue.

Goldfinch Mule, and a Chaffinch (Perplexed).—(1) If you bought the Mule from a bird dealer, you can be practically certain it is a hen. They would very seldom be guilty of selling a cock as a hen. Hen Mules will certainly sing when well fed, and so in high condition, but they do not sing with the volume and freedom of a genuine male, nor by any means. If a twice house-moulted Chaffinch still remains very unsteady, then I am afraid you will never get it steady. Still, as you have but just bought it, there is some hope, for he may not previously have been treated kindly. For food, see another reply this week.

Wild Seeds (J. G. M.).—I am trying to get the wild seeds correctly named for you, not being sure of them personally.

Linnets from Russia (no nom-de-plume).—Yes; most certainly Linnets are imported into this country from Russia and Germany, but not very often. I have not seen any this season, and when they do come, it is, I believe, only in limited numbers. Their value, you see, is very small. "Siberian Linnets" is the usual trade description of them. As far as I have seen they are not a scrap larger than our native Linnets, and generally very light in ground colour.

Bramblefinch and Goldie (Kyle Lad).—Keep the Goldie in an even, warm temperature, and every other day stir a small teaspoonful of Parrish's Chemical Food into its drinking water (two tablespoonfuls). Give daily the special seed mixture advised "Scotland" in this issue. He should be ready, then, for a nest or two late in the season. It is quite possible to breed a Bramblefinch-Chaffinch Hybrid in an aviary from parents that have not been moulted in captivity.

FOREIGN BIRDS.

Answered by Wesley T. Page, F.Z.S., M.B.N.H.S.

Budgerigars not Breeding.

"Burton Pidsen."—The tide of luck ebbs and flows. In 1906 I was overrun with young Budgerigars; in 1907 results were almost nil. Of course, an outdoor aviary is better than the fluctuating temperature of a glasshouse, but the difficulties ought not to be insuperable. Put a cover to their aviary, underneath the glass, with a space for circulation of air between the two; it would also be better if the end of the enclosure were boarded up, and only the front open-wirework, as then you could arrange a free circulation of air in your greenhouse without subjecting the birds to draughts. Budgerigars are very precocious, and will often breed before they are a full year old. Let your birds have Canary, millet, spray millet, a few oats, greenfood (leaf of tender lettuce), and keep several pieces of cuttlefish hanging about their enclosure; also crush some cuttlefish to about the size of millet, and mingle some with the sand. There is only one thing to do, if your hens won't settle down in March or April, get rid of them, and procure others from a different source to that from which your present stock came. By the way, as a rule, two or three pairs of these birds breed together with greater freedom than do single pairs. For the next month lightly colour the drinking water with Parrish's Chemical Food.

"Too Old at—"

A. L.—There are very few Blue-fronts but what will talk a little, and as yours is such an excellent mimic, there is little doubt but that it will sooner or later delight you with speech. Keep it where it will hear plenty of conversation, and patiently teach it by constant repetition of words and short sentences as well. Feed in the manner advised in this column regularly, and the bird should do well. It certainly is not an aged one, and if you pet it a great deal and talk to it, etc., it should ultimately turn out a talented specimen.

A Slender-billed Cockatoo.

H. C. G.—It appears to me you have a slender-billed Cockatoo. If so, it is neither a very interesting or talkative species, though Dr. Greene, in "Parrots in Captivity," gives an account of a fairly-accomplished bird. Its value is usually from 15s. to 21s., but of course a talented talker would command a higher figure. It is a help at times to put a moulting bird on a course of Parrish's Chemical Food, one teaspoonful of the food to two tablespoonfuls of the drinking-water. Keep a piece of clean cuttlefish within its reach. I should say from the details you supply that the bird is fully about fully mature. Keep it out of draughts, but do not coddle, neither give any tablescraps, or tea-slops, etc., which some poor birds are dosed with.

Treatment of Green Cardinal.

P. J. R.—Your letter was a mystery to me, till I turned up the number. It is those printers again. My "copy" (perhaps badly written) most certainly said Green Cardinal, and I must ask you to read it as such. The treatment there is fully given, but I may qualify it, perhaps, to this extent, that in some few instances they have bred without any trouble at all; certainly they are very ready to nest, and if you have let them have an enclosure almost to themselves, you will most probably meet with success in breeding the species. They certainly are most handsome when in condition, and when the male is displaying or making play to the female, he is almost gorgeous, as he brings into view the partially obscured and brilliant yellow of the tail and wing feathers.

Blue Front not Talking.

George Mustey.—It is really extraordinary that this bird, after being in such social surroundings for so long, neither mimics nor talks. I can only now suggest the constant repetition method; talk to it, repeat words to it over and over again; whistle to it, whistle at it (that is, if it will not be too great an infliction on the other members of the household), and let your little boy do the same, but, of course, not to annoy or tease the bird. If you have any other bird which is a continuous whistler, keep this in the room with it (out of its reach, though) for a time. At the same time it is not advisable to let a Parrot observe you petting anything else. They are very jealous creatures, with long memories, and will often wreak their vengeance on the object of your caresses if opportunity offers. Hope your bird will yet break through its reserve.

Grey Parrot not Talking.

C. S. A.—As soon as the bird has got accustomed to you, see that there is ordinary conversation going on within its hearing. Talk to it gently and softly, and be very careful not to in any way scare it. There is a great deal of variableness with these birds, and some individuals are not nearly so responsive at first when in a new home; in fact, I have known authentic instances of known talkers becoming practically dumb for months, merely owing to a change of home. I should continue to try it with ripe fruit. I find Parrots generally most fond of orange, apple, and sweet-water grapes, fasten a bit between the wires of its cage; it will end with the bird playing with it and acquiring a taste for it. Read other replies; there are several in this issue which you should find helpful.

Yellow Budgerigar Panting.

"Budgie."—I should certainly cage this bird up. Give it, direct to the beak from the quill, about six drops Dinneford's Magnesia, and in four or five hours repeat the dose. Get from your chemist the following mixture:—Ipecacuanha wine, oxymel of squills, and glycerine in equal parts; dilute a little with an equal bulk of water, and give the bird six or eight drops from a quill two or three times a day. When the wheezing yields, discontinue the mixture, and give it a Parrish's Chemical Food diluted with an equal bulk of water, also from a quill. In addition to its seeds, give it a little sponge cake, on which you have dropped three or four drops of Parrish's Chemical Food. Keep the bird out of draught.

Roseate Cockatoo and Food.

F. Davies.—Your details are so meagre, that advising you at all is a matter of much difficulty. It is evident that by some means the bird has got hold of something of a very unwholesome nature, and I fear this reply will arrive too late. However, it's a hardy species, and it may possibly be still in the "land of the living." If so, give it three doses of Dinneford's Magnesia (one teaspoonful in its drinking water) with a day's interval between each dose, follow this by making its drinking water the colour of pale port with Parrish's Chemical Food, and continue this for some time. Diet: A mixture of oats, wheat, dari, Canary, hemp, small maize and sunflower seeds, as a staple diet, varied with plain biscuit, ripe fruit, nuts, and a little boiled potato or raw carrot. Do not give tea, coffee, or milk slops, table scraps, or any kind of animal food. Keep out of draught and quiet.

What Cockatoo?

(1.) I fear you have given me rather a difficult task in such a brief description. It appears to be the slender-billed Cockatoo, but I could give you a definite reply if you would inform me if it has a crest and the colour of same. (2.) Their value is but small, for one such as yours (providing it is a slender-bill) being in fine condition, say, one guinea. Of course, your bird may be some other species, then its value would be higher—let me have a fuller description. (3.) I do not remember to have heard a talking Slender-bill, but Dr. Greene, in "Parrots in Captivity," gives an account of one which was a fair talker and a good mimic, so yours may do so. (4.) I should most certainly advise the removal of the brass chain—get a steel one. (5.) Diet is correct, but I presume you are giving the items advised in this column—plain biscuits, ripe fruit, etc. (6.) I always put on a stout pair of garden gloves when handling a Parrot or Cockatoo, and to place the hands as far out of reach of the bird as possible; but as you are in the habit of feeding it, etc., there should be no risk in your handling it. I find that these birds and similar species not only do not object to, but apparently rather like being fondled and handled.

Amazon with Sore Tongue.

Polly, North Shields.—Get from your chemist the following mixture: 30 grains of Chlorate of Potassium and 3 drachms of Glycerine, wipe out the bird's mouth two or three times a day, using a small camel hair brush for the purpose; use a fresh portion of the mixture and well cleanse the brush on each occasion. Give the bird one teaspoonful of Dinneford's Magnesia for one day only, soak it into a piece of sponge cake, crust of bread or piece of biscuit. Keep the cage strictly clean, and you must not give any tea, coffee or milk slops. You will find the correct diet both in this and previous week's issues. Your bird appears to be the Yellow-fronted Amazon, and from your description of what it can do already should make quite a talented talker. I had better perhaps repeat diet. Seed mixture: Canary, wheat, oats, maize, dari, hemp and sunflower seeds, one part each of the others with two latter, and two parts each of the others with ripe fruit, plain biscuits, nuts, green food, etc. See other replies re teaching to talk.

Grenadier Weaver.

It is the Oryx or Grenadier Weaver. In full colour and fine condition it should stand a good chance of catching the judge's eye; of course when out of colour, being a plainish brown bird and not rare, its chances on the show bench would be very small. These Weavers are the better for a few live insects during the period of moult or when changing colour. In fact, a few regularly are rather beneficial than otherwise. During summer let them have grass in flower ad. lib.

Wild Canaries.

"Constant Reader."—The Ultramarine Finch is the Combason. The others are all Canaries. Captain Shelley in his "Birds of Africa" gives all the genus Serinus, the English designation of Canary. In recent issues, under the title "Housing and Keeping of Foreign Birds," I have reviewed this genus and you would doubtless find it of much interest to look up your back numbers. Captain Shelley gives the following list of Canaries:—Abyssinian Black-headed, Angola, Black-faced Blandford's, Brimstone, Burton's, Cape, Cape White-throated, Common Yellow-fronted, Damara White-throated, Decken's, Donaldson's, Fischer's Streaky-backed Huilla, Jackson's Brown, Madarasz's, Marshall's, Mountain, Reichenow's, Ruppell's Masked, Ruppell's Yellow-rumped, Senegal Yellow-fronted Shoa, Socrota Golden-winged, Somali Golden-winged, Streaky Brown, Sundevall's, Swainson's White-rumped, White-throated Brown and Whyte's.

Species of Parrakeet.

E. G., Skipton.—(1.) It is an Indian Ring-necked Parrakeet, of which there are several local races. It would be almost impossible to say which without seeing the bird. (2.) The proper seed mixture is two parts each Canary seed and oats, and one part each wheat, dari, hemp, small maize and sunflower seeds—well mix and keep a continuous supply in the cage. Also give as extras and for variety, ripe fruit, plain biscuit, nuts and a little green food. Cuttlefish should be given regularly. (3.) If there is no running at the nostrils, a few chillies added to its seed mixture should soon correct this. If, however, this should develop, use diluted glyco-thymoline to keep the nostrils clear. Further than this, treatment must largely depend on the individual case.

Rosella with Distended Crop.

W. J. W.—It appears to me there is some obstruction in the crop, and that the best course would be to let a "vet" see it. He would operate and give speedy relief. Your other course is to give it half a teaspoonful of Dinneford's Magnesia, direct to the mouth and repeat the dose on the two following days. Well colour its drinking water with Parrish's Chemical Food. A teaspoonful of chilled water, containing 3 or 4 drops of brandy twice a day would act as a stimulent while it is in such a weak condition. I am much afraid you have applied to me too late, the bird being too far gone to treat in the ordinary way. An operation, however, by your local "Vet." would probably save its life. At the same time I have had birds under somewhat similar conditions which have yielded to the treatment and recovered after being apparently at the last gasp. Hope it will be so with your bird. Report progress in a week's time.

POST MORTEMS.

Mr. J. North, 435, Oxford Road, Reading, will examine cage birds for a fee of 1s. 6d. each bird; for a reply direct, 2s. 6d.; analysis, 21s. Subjects for post-mortem examination must be sent packed in a box direct to J. North, with fee. Any sent to the office of this paper will be thrown away, and if a fee is enclosed the loss will be the sender's.

Canary Hen (Ruan).—This bird had a large ulcerous wound under the skin, behind the right breast and under the shoulder. It was not of recent formation, and absorbed a great deal of blood from the system, the liver being pale and shrunken. The large blood vessels running into this wound became ruptured, leading to the sudden collapse.

Goldfinch (Maytree).—Enlargement of liver, bilious feverishness, and pneumonia.

GENERAL.

Answered by THE EDITOR.

Vale of Conway and Dist. F.A. (A. T. Johnson).—The notification you send us has already been inserted in our columns, and we can only print it again in full at our rate for advertisements. One notice for each event has always been our rule.

"Tenpenny Ale" (E. P.).—We have communicated with Mr. Metcalfe, who informs us that by "tenpenny ale" he means strong ale (not bitter), such as Bass' No. 1, or Allsopp's Old English Ale, he himself using the latter.

Friendly Help (T. Ogden).—We are indebted to you for your kindly help, which we much appreciate, and shall be pleased to reciprocate in any way we may legitimately do so.

Tame Linnet "Picked up" by Another Person (W. J. Alcock).—If you can back up your own identification of the Linnet with the testimony of other persons, then your best plan is to state the facts at the local police station, when we think the matter will be put right for you. Your offer to pay over a "reward" is certainly generous.

Canary Rings and Their Fitting (Canary Ring).—In the "Stock Book," post free 7d., you will find full particulars of closed and open rings, their uses and manner of fitting.

Sketches (A. G. Baker).—Thanks for the sketches. At least two of them, however, have previously appeared in our "Illustrated Ideas" column.

Softbill Stock Cage (W. H. Turner).—In CAGE BIRDS ANNUAL for 1906 (post free 7d.) you will find illustrations and particulars of stock cages for both large and small insectivorous birds, and suitable for the majority of species.

Report (A. H. C. L.).—Accept our best thanks. We appreciate to the full your kindly remarks concerning ourselves, and "smoled" more than once at your humorous description of the difficulty you experienced in addressing a certain person in strictly proper form.

"Useful Sketches" (F. W. Thornley).—Probably in the near future we shall be able to do as you suggest. It has been our intention from the first.

An Advertisement (S. Tait).—You omitted to enclose the advertisement to which you say you wish our attention drawn. Always adopt the deposit system is what we have ever urged upon buyers.

"Catalogue of Breeding Canaries" (D. J. Rees).—What do you mean by "catalogue of breeding Canaries"? We do not sell birds; but there are plenty of people using our advertisement columns who do, and who can fit you out to a nicety.

Warrington and Dist. C.B.S. (Jas. Emmett).—You are under a misapprehension. We did not get hold of an old club notice. On the contrary, the one published is in your handwriting, postmark Feb. 17, '08, and the date of meeting appears on the same as "Nov. 27." This postcard is not signed; and that is how the names of the late secretaries got attached to it, as they were turned up in our last year's ANNUAL, that for 1908 not being then published.

Rule 8 (H. C. Hoyle).—There need have been no question of throwing "good money after bad," as you put it. If readers choose to risk the loss of the whole of their money rather than pay a small deposit fee, they can hardly blame us when that risk materialises. They make it impossible for us to render them that help we are always desirous of giving in cases where they have legitimate cause to consider themselves badly treated.

A PUZZLE PICTURE.

Two Competitions for Readers.

Competition No. 1.

On p. 145 of issue for Feb. 15 appeared a full-page drawing of six Norwich Plainhead Canaries, all more or less faulty specimens. Yet amongst this faulty half-dozen are hidden a number of "parts" which, if the whole of the birds could be dissected, and the said "parts" successfully joined, would produce one high-class exhibition specimen.

This is a puzzle we ask readers to solve, and we offer a

Cash Prize of Half-a-Guinea

for the correct solution. The "key" to the mystery, we may say, will remain in our artist's keeping until the date of the competition closing.

To make the matter quite clear, we will say by way of fuller explanation, that what our readers have to do is to take a pair of scissors and a pot of paste (or gum), and cut out certain parts from each of the six birds depicted, so that these parts, when pasted on a clean sheet of paper, will make a picture of a Norwich Canary fit for "keen competition." The exact parts to be used—a leg from here, a beak from there, and so on—are at present known only to our artist. And it is for exercising their powers of discrimination in solving this puzzle that we offer readers the half-guinea prize. In the event of a tie, the neatest picture will take the prize. The Editor's decision will be final

Write your Name and Address clearly on the back of each attempt sent in, and post them to reach us NOT later than TUESDAY, MARCH 10th next, on which day the competition will close.

Mark your envelope COMPETITION in top left-hand corner, and do not enclose any other communication in the same.

Competition No. 2.

On the occasion of our last competition on the above lines, we received several letters asking us to provide another similar skill competition, but with an entrance fee attached to it, the whole of the entrance fees received to be pooled and make the prize, or prizes. On consideration we have decided to hold such a competition in connection with this Norwich Canary puzzle picture, in addition to the usual competition detailed above. The same conditions and stipulations will apply to it, except where hereafter modified.

What You Have to Do.

To compete in Competition No. 2, you have to send along the exhibition bird, cut out and pasted up as described in Competition No. 1, but accompanied by a

POSTAL ORDER FOR SIXPENCE,

made payable to "F. Carl, London," and crossed "and Co.," for safety. All the postal orders received will be pooled, and the total value, less five per cent., will be distributed in prizes according to the amount received. That is to say, if the entry is a large one, the amount will be divided into first, second, and third prizes; but if a small one, then only one prize will be given, the option to rest with the Editor.

Closing Date Tuesday, March 10th.

NOTE: Any Reader may enter both Competitions, but NOT with the same bird. One bird must be sent with each entry.

SINGING CONTESTS.

LEEDS.

Usual weekly contest held on February 22nd, when 26 birds sang at King's Head, Shannon-street, Leeds. 1st prize, T. Stead; 2nd, T. Johnson; 3rd, T. Summers; judges, Messrs. S. Hardcastle and E. Worth. Also on February 23rd, when 30 birds sang. Some very good singing was heard. 1st prize, P. Foley; 2nd, J. Nicholls; 3rd, C. Biss; 4th, T. Stead; judges, Messrs. T. Summers and C. Cooper.—T. SUMMERS, Hon. Sec.

A week-end contest was held at Skinner's Arms, Bushmthope-lane, when 24 birds sang. First, Draper (Woodhouse); second, J. Ridgewell (Sheepcar); third, B. Smith (Armley); Judges, Messrs. J. Clark and G. Towers

LOWTON (Lancs.)

An important contest was held at the Shepherd's Inn Linnet Club, on Feb. 22, when upwards of 50 birds competed. The following winnings were recorded. 1, Hy. Hayes; 2, Wm. Howard; 3, J. Statham; 4, P. O. Neild; 5, J. Hatton; 6, J. W. Jones. The remainder of the evening was spent in harmony, various members contributing choice selections in songs, ably accompanied by Mr. F. Boydell. The contest was concluded by a hearty vote of thanks to the host and hostess, Mr. and Mrs. Boydell, for the efficient manner in which the whole of the proceedings were carried out.—W. E. WILCOCK, Sec.

(Please write on one side of the paper only.—Ed.).

WARRINGTON.

A Linnet singing contest was held at the Alexandra Inn, on 15th Feb., when some capital singing was heard. 1st and 3rd, T. Statham; 2nd, G. Tryner; 4th, T. Armitage. Judges, Messrs. P. Oneil and T. Crawford; time keeper, Mr. J. Ball.—J. MATHER, Hon. Sec.

YORK.

The usual weekly contest was held at the Crown Inn, North-st., when 22 birds competed. The following are the principal prize-winners: 1, T. Lambert; 2, G. Horwell; 3, J. Moore; 4, A. Watson; 5, G. Horwell. Judge, Mr. W. Perry. Timekeeper, Mr. J. Mason.—J. W. SMITH, Sec.

Usual weekly contest was held at the Bricklayers' Arms, Palmer-lane, Hungate, on Feb. 22nd, when 28 birds faced the judge, whose awards gave every satisfaction. The singing was excellent. The following are the principal prize-winners: 1, A. Chaplin; 2, H. Allan; 3, Joe Whitehead; 4, Oldroyd; 5, G. Key; 6, Shoddy Foster. Judge, Mr. Jno. Paver. Timekeeper, Mr. Jim Limbert.—WM. EMPSON, Sec.

BLACKBURN.

The Blackburn L.S.A. held a contest for quality singing on Feb. 22nd, at the club headquarters, Old Red Lion, Snig Brook, Blackburn. There was a great muster of birds and the singing was extra good. The prize-winners are:—1st, P. Blackshaw; 2nd, G. Rostron; 3rd, G. James. Judge, Mr. A. Catterall. Timekeeper, Mr. R. Gopping. An open All-England Linnet singing contest for quality will take place on March 7th at the Club House, singing to commence at 1 o'clock prompt. 1st prize value 10/-, and a number of other prizes; entrance fee 1/- per bird.—R. HAYHURST, Sec.

PRACTICAL HANDBOOKS FOR BIRD LOVERS.

"AVIARIES, BIRD ROOMS and CAGES," their Construction and Management.

By H. NORMAN. Copiously illustrated with both Photographs and Sketches, Bound in Cloth and Gilt, 2/3 Post Free. This volume, the latest of "Cage Birds" publications, is absolutely unique in its design. The information given in it is on sound practical lines, and all fanciers whether large or small will find it most helpful in the housing and management of their feathered pets.

"HOUSE'S CANARY MANUAL."

By C. A. HOUSE. Post Free, 1/2, Cloth Bound, 2/2. (Fourth Edition of "The British Canary"). This thoroughly praetical book, the latest edition of which has been re-written by the Author. Superbly illustrated by the Champion Canary Artist, Mr. H. NORMAN. EVERY BIRD DEPICTED IS A VERITABLE MODEL, and shows the breeder what to aim for. Some idea of the popularity of this Practical Manual may be gathered from the fact that under the title of "The British Canary," it has passed its third Edition entering upon a Fourth Edition of 5,000 copies under the new title of "HOUSE'S CANARY MANUAL." Mr. HOUSE has thoroughly revised and brought this work up-to-date and incorporated a chapter on the "Roller or Singing Canary."

"CANARY BREEDING FOR BEGINNERS."

By CLAUDE ST. JOHN. Post Free, 7d.; Cloth bound, 1/2.
An exceptionally helpful, intensely practical and instructive handbook for beginners and tyros at canary breeding. It is profusely illustrated and contains innumerable hints helpful to all young bird keepers. In this handbook the reader is taken from the pairing up of the stock to the placing of the young birds on the show bench. It is equally applicable to the fancier with one or a dozen pairs.

"THE STANDARD WORK."

"YORKSHIRE CANARIES: How to Breed Manage and Exhibit."

Price, Post Free, 1/2, Cloth bound 2/2.

By H. W. BATTYE, President of the Yorkshire Union, and deals fully with the Yorkshire Canary and its sub-varieties, should be in the hands of every breeder. It gives the fullest instruction upon Pairing, Breeding, Moulting, Exhibiting, and how to treat both in health and disease. Illustrated by Messrs. H. Norman and A. J. Simpson. Among its most useful contents will be found a chapter on "Dont's." This of itself is worth the price charged.

"THE HYGIENE OF BIRD-KEEPING."

By Dr. CRESWELL, M.D. Post Free, 1/1.
A most useful manual, thoroughly treating of modern hygiene in bird-keeping, by the most eminent living authority on the subject.

"SEPTIC FEVER OR CANARY PLAGUE."

By R. H. CLARKE, M.D., M.A. Post Free, 7d.
A very useful booklet on this subject, which should be found in every bird-lover's library. Dr. Clarke has given the subject of this book very special study.

All about the "NORWICH PLAINHEAD CANARY."

By Mr. J. H. PAYNE. 1d.; Post Free, 1½d.
A Lecture reprinted from "Cage Birds," delivered by this leading judge and expert before the London and Provincial Ornithological Society, and pronounced by all experts to be a most valuable pamphlet.

F. CARL, 154, Fleet Street, London, E.C.

CLUB REPORTS.

MIDDLETON O.S.

On February 17th, at the Coffee Palace, Middleton, Mr. J. Hampshire, of Oldham, gave a very interesting lecture on cage-making. There was a good attendance of members and friends. Mr. Hampshire was asked a good number of questions, which he answered very promptly. It was moved by Mr. R. Cowherd, and seconded by Mr. R. Taylor, that the best thanks of the meeting be given to Mr. Hampshire for his very interesting paper. We are changing our meeting place to the Old Boar's Head Hotel, Long-street, Middleton.—H. THOMAS.

DULWICH AND PECKHAM C.B.S.

The following gentlemen have been elected members of the Dulwich and Peckham C.B.S.:—Messrs. J. W. Ramsden (manager of the Great National Show), A. C. Burn (chairman of the City and Suburban), A. W. Curtis, W. Norris (secretary of the Roller Club), J. Hodder, A. S. Rouse, Young, C. Brown, and Smales. It is a very great satisfaction to the committee when such well-known gentlemen as the above join our ranks, and spurs them on to further and greater efforts to make our Society second to none.—W. BODSON, Hon. Secretary.

LONG EATON & DISTRICT C.B.S.

The monthly meeting was held on February 15th at the co-operative class-room, Station-street, when a good number of members were present, Mr. H. Hay in the chair. It was decided not to have a First Feather show this year, but a date was fixed for an open show, which is to be held on November 28th and 30th under Cage Bird Union rules. We have secured the People's Hall for the show, and without a doubt it is one of the best halls in the country. The judges selected are: Messrs. J. Robson (London), and J. H. Roe (Derby). The society has only been going for nine months, and we are pleased to say it is doing well. It has a cash balance of £10 18s. on last year, which is most encouraging. Four new members were added to the list: Messrs. S. Day (College-street, Long Eaton), S. R. Turner (New Sawley), W. Wilcox (Long Eaton), and J. B. Caunt (Dagmar Grove, Beeston). After the business a discussion ensued on all kinds of birdy matters, Mr. W. Turner making some remarks which were most interesting to all.—E. BARKER (joint sec.).

ACCRINGTON AND DIS. C.B.S.

Annual general meeting was held on February 13th, at headquarters, Central Conservative Club. The report of the year's working was read and proved very satisfactory to all concerned. There was a slight loss on the open show but this was accounted for through the show being held a month earlier than was first decided on. But we had no other option as the C.B.U. would not accept us, as our first date clashed with another society which was already affiliated, so we had to change our date. Hence the loss which we hope will not occur again. Next item on the agenda was the election of officers for the ensuing year; Councillor John Smith, J.P., a genial whole-hearted fancier of many varieties, was again elected president and chairman. Mr. W. Dormer of cinnamon fame and Mr. W. Wade were elected vice-chairmen; secretary, Mr. Jas. W. Philpott; treasurer, Mr. A. Taylor; auditor, Mr. R. Haydock; Mr. John Trengove, the well-known Norwich Plainhead fancier and judge, was elected C.B.U. representative on behalf of our society. A vote of thanks was then given to the retiring officers for their services during the past year. They are Mr. J. O'Brien, treasurer, and Mr. D. Harwood, secretary. The monthly business was then taken, the most important being the confirming of the date for the open show which will be held on October 23rd and 24th. We have now about 20 members, which is not bad for one year's working, and we hope to increase our numbers. We have no distance limit. We shall be glad to hear from and will accept any fancier wishing to become a member. Subscription 5/-, per annum payable half before young show, remaining half before open show. There will be a series of lectures, etc., during the year, notice of which will appear in the club notice column of CAGE BIRDS. There will be an interesting lecture at our next meeting at headquarters. Fanciers are cordially invited as we wish to make these lectures popular and also a means of giving the novices a chance of picking up some hints on the management of all cage birds. Fanciers please note my address.—JAMES PHILPOTT, Hon. Sec., 28, Jubilee-street, Oswaldtwistle.

KENT COUNTY C.B.A.

The annual meeting was held in Dover on February 12, Mr. Nelson Campany in the chair. The hon. secretary's report followed, in which he stated that the year 1907, which was the second year of their existence, had produced good results generally although there were one or two items which might cause regret. They had had a very expensive year in several respects. They had purchased four rose bowls and one challenge cup, which, together with a cup and shield possessed at the commencement of 1907, they had in hand for future competition. In addition, their vice-president had given a silver cup for Borders, which, had, however, been won outright this year and which they hoped to replace shortly. Mr. Broad, in addition to a gift of 21s. to the Cup Fund, had also given a six-bottled cruet value 30s. The Cup Fund realised £6 17s., which was contributed to by thirty members, all of whom had duly paid up. Patronage had been given to the following shows:—Rochester, Gillingham, Folkestone, Dover F. and F., Margate and Canterbury. They had also held an Association show in Dover on October 30 and 31, which, although not the success expected, was not by any means a failure. Of the sixty members remaining on the books fifty-four were included in the balance-sheet, four others having since paid up. The secretary thought that the Society might look forward to a successful year, and with a greatly reduced expenditure. It might also be mentioned that owing to a malicious report circulated in order to injure the Association and annual show, to the effect that the latter would be a great failure and a dead loss, Mr. Jno. Broad had written saying that in that event he was good for an additional contribution, and another gentleman, who wished to remain anonymous, offered to make good any loss, even if it cost him £5. The Society did not require to avail themselves of either offer. In conclusion Mr. Ward moved, and Mr. Eade seconded, that the balance-sheet and report be passed as read and adopted; which was carried unanimously. Mr. Heritage moved, and Mr. Abbott seconded, a vote of thanks to the secretary for his services during the year, Mr. Birch expressing his regret that their finances would not admit of an honorarium being voted that official. The following elections took place:—Chairman and vice-chairman, Messrs. Campany and E. C. Rayner; committee (headquarters), Messrs. (Johnson., Leaver, Eade, Lockett, Langley, Rowe, Ross and Stokes; (county), Messrs. Acland, Brett, Broad, Casemore, Gibbs, Jones, Jenner, McCreath, Patterson, Taylor, Wickham, and Dr. T. A. Bowers. The winners of the various cups and bowls are:—Crests and Crestbreds, Mr. Jno. Broad; Norwich P.H., Mr. Gibbs; Yorkshires, Mr. Gibbs; Borders, Dr. T. A. Bowes; Lizards, Mr. W. J. Abbott; British, Mr. L. A. Brett; and in Mules, Messrs. Ward and H. E. Taylor tied with 32 points each (the former having only exhibited at three shows out of seven available). Mr. Ward, however, waived his claim in favour of so enthusiastic a young fancier as Mr. Taylor. Mr. Ward's action was favourably commented upon by those present. But what cares he for a dozen bowls or cups, despite insinuations to the contrary which have lately appeared in the Fancy Press, where the interests of the Fancy generally and the K.C.C.B.A. particularly, are concerned? The challenge shield was again won by Mr. Gibbs, and the cruet went to Mr. Jenner. A cordial vote of thanks to Messrs. Abbott and Auden, who declined to take office this year, brought a protracted and successful meeting to a close.—GEO. SANDERSON, Hon. Sec.

BRADFORD (West) C.B.A.

Mr. H. J. Chittenden gave a lecture to the members and friends of the Association on "British Birds and Mule Breeding," at the Red Lion Hotel, Girlington, on February 22. He gave some very profitable hints on the breeding of Finches and their habits. A very enjoyable evening was spent, and was brought to a close by a vote of thanks to the lecturer, proposed by the Chairman (Mr. W. A. Cowgill), seconded by Mr. J. Greaves, and supported by Messrs. D. Sunderland and Brotherton.—H. CLEGG, Secretary.

GRIMSBY C.B.S.

Owing to unavoidable circumstances in Grimsby several of the leading fanciers have decided to carry on their society under the above name. We have arranged to hold our monthly meetings in Forester's Hall on the first Saturday evening in each month at 7.30, when all fanciers are welcome to join. The following officers have been chosen:—Chairman, Mr. W. Clews; vice-chairman, Mr. A. Townsend; treasurer, Mr. A. Clapham; committee, Messrs. Beels, Peplow, F. Emerson, and Nightingale; secretary, Hy. Emerson, 2, West-parade, Grimsby. Next month, on March 7th, we are to have a discussion on pairing, breeding, and rearing.—HY. EMERSON, Hon. Sec.

NORTHERN B.B.M. AND F.B.C.

At our meeting on Feb. 19th, we held a grand table show of British Hardbills, no less than 26 being staged, including some very promising ones for next year's shows. The result was as follows: 1, 2, spl, Maddison, Goldfinch-Greenfinch; 3, spl, Slack, Mealy Redpoll; 4, spl, Bailey, Bullfinch; 5, Maddison, Twite; 6, Irving, Chaffinch. The entrance money 6d. per cage was divided into six prizes with two spls given by Messrs. Harris and Sheppard, Naturalists. There was a good attendance of visitors and six new members were enrolled. The next meeting will be the general meeting on 21st March, when all medals won by members will be paid and balance sheet read. We shall also arrange for table shows for the coming season.—J. R. SLACK, Hon. Sec.

YORKSHIRE C.C. OF IRELAND.

The committee met on February 20th in the Douglas Hotel, Eden Quay, Dublin, Mr. Devitt in the chair. Also present, Messrs. Duignan, Sheridan, Fry, Farrell, Giller, Huggard, and Sholedice. A letter was received from Mr. Barclay, Dublin, enclosing £1 towards the expenses of the club. This was not the first time for Mr. Barclay to act so generously, and it is hoped some others will follow suit before the year ends. Messrs. Murtagh and Hyland, of Dublin, and Tighe, of Sligo, were admitted members of the club. The points won at the various shows were next taken up, and the following is the result:—For Y.C.C. challenge cup: Messrs. Sheridan and Fry, 114; C. A. O'Reilly, 86; J. J. Cloke, 59; A. South, 49; W. C. Sholedice, 48; W. Hawkins, 27; C. J. Mulligan, 26; J. Huggard, 23; R. F. Duignan, 14; J. Devins, 13; W. Fortune, 4; F. O'Neill, 1. It would be well to say that Messrs. Duignan, Huggard, Hawkins, Fortune, and O'Neill did not nominate their three birds at the last few shows to compete for cup. For novice cup: J. Devins, 103; J. Huggard, 71; P. Gillen, 55; A. McIlveen, 45; M. Fleming, 31; N. Thompson, 24; C. McKenzie, 16; T. Farrell, 12; J. Dowling, 10; J. McKittrick, 0. The following resolution, proposed by Mr. Devitt, and seconded by Mr. Duignan, was lost: "That in the three highest numbers for challenge and novice cups the points be separated for colour-feds and non-feds." But the secretary promised Mr. Devitt that he would let him have the figures for his own personal information. The committee refused to allow Mr. Devins his additional points for challenge cup, as they were secured in novice classes. If Mr. Devins in future wished to compete for challenge and novice cups, he should come out into the open classes for challenge cup. The treasurer was instructed to refund Mr. McCaldin (Banbridge) 1s. 10d., carriage paid on his birds from the show, and to take credit for the amount in his show account. An application was received from Mr. Devins asking to have his medal for novice cup, the same as a drawing which he enclosed, but as the medal far exceeded the price which the committee were in the habit of paying, they regretted that they could not accede to Mr. Devin's wishes, and they could not allow him to pay anything towards the medal. They were of the opinion that if they did, in reality the medal would not be presented by the club. The meeting then closed.—W. C. SHOLEDICE, Hon. Sec.

The most serviceable, striking, yet tasteful and economical

LIVE BIRD LABELS

are those obtainable from "Cage Birds."

For the convenience of readers we have had printed a quantity of address labels suitable for use when despatching live birds on journeys by rail, etc. These are printed in red ink on paper gummed at back, and are

TAMWORTH AND DIS. C.B.S.

An interesting washing exhibition took place at College Lane Schools on February 22, Mr. Hatton washing two birds. The first one was to show the members how to wash their birds, and the second how little time it could be done in. It took about three minutes to wash. A hearty vote of thanks from the members to Mr. Hatton brought a pleasant meeting to a close. Mr. Wells is giving a lecture on "Pairing and Canary Breeding" on March 7.—G. E. SPENCER, Hon. Sec.

COVENTRY O.S.

The 27th annual meeting was held at the Sydenham Palace Hotel, Lower Ford-st., on Feb. 19th, Mr. F. W. Harris in the chair. The balance sheet was read and passed. Although there is a slight loss on the annual show caused mainly by the boys' bird drawing competition, there is still a balance in hand of £3 2s. 6d. This was considered satisfactory. The following were elected to office for the year:—President, Mr. T. Gilbert; vice-presidents, Messrs. F. W. Harris and G. Turrell; treas., Mr. Geo. Clarke; auditors, Messrs J. Hadley and T. E. Waring; committee, Messrs. J. Corrall, H. Davis, J. A. Lucas, J. Atkins, G. Lawrance, T. Chillingsworth and A. J. Barratt. Hon. Sec., Geo. Peters, "Sandgate," Coundon-rd., Coventry.—G. PETERS.

LEITH O.S.

The monthly meeting was held in the Liberal Club Hall, Hope-street, on February 17th, Mr. Jas. Lumsden, president, in the chair. There was a capital attendance of members and friends, the occasion being a lecture by Mr. Alex. Cochrane, his subject being "Cage Birds as a Hobby." Mr. Cochrane treated his audience to an interesting description of all the different varieties of the Canary family and British birds, which anyone might think of taking up with as a hobby. He also gave the members a few practical hints on the management of the bird-room. Several questions were asked by the members, including ex-treasurer Graham Good, who, in a few humorous remarks, spoke of his experiences in the keeping of cage birds. Bailie Lindsay, who is one of the society's patrons, said he had listened with great interest to the lecture, and in a few remarks spoke of the desirability of having a hobby to take up one's spare hours, and said he would do everything in his power to help the society. At the close a hearty vote of thanks was accorded the lecturer and the chairman. We have enrolled ten new members this year, but are hoping to see a good many more; fanciers will be made welcome.—GEORGE BROWN, Secretary.

CITY AND SUBURBAN A.C.B.

A well-attended meeting took place on February 17th. Mrs. Pile, Messrs. J. Warwick, and H. P. Morgan were elected members. Nominated candidates were: Miss S. Brooke, Mytchet-place, Frimley, Surrey, Mrs. Morrison, 85, New Cavendish-st., W., and Mr. Hopkins, 16, Wakefield-st., West Ham. A vote of condolence was passed to the widow of the late Dr. Rountree, and expressions of sympathy to Messrs. B. Stevenson, and S. Monger, on the loss of their birds by smoke and gas fumes. The schedule of the Finch show taking place on March 21st, consisting of Finch, Insectivorous, and Foreign classes, was adopted and Messrs. C. Prior, G. E. Weston and F. Turnber were nominated to judge. The following were nominated for the Young Bird Show:—Messrs. J. S. Clarke, C. A. House, J. Robson, G. Gardner and G. E. Weston; upon a vote being taken, C. A. House and J. Robson were elected to be submitted to a final vote. The secretary's motion for investigating into the cause of 50 members abstaining from voting at the annual election failed to reveal any defect. Special prizes for the Finch show were promised by Messrs. F. Easter ling and A. C. Burn, and a guinea cup by an anonymous donor. The secretary proposed, seconded by the chairman, that the expenses of the delegate to the C.B.U. Mr. A.W. Curtis, be paid from the funds to enable him to be present at the annual meeting at Manchester, which was carried, the chairman remarking that they (the executive) had departed from precedent by not holding it at the Palace, and in consequence handicapped those delegates living in the South and West of England.—V. WYNN, Hon. Sec.

NATIONAL BRITISH BIRD AND M.C.

The adjourned annual general meeting of the above club was held at headquarters, 25, High Holborn, on February 17th. Present: Messrs. Robson, Fulljames, Maxwell, Trower, Goodchild, Cooper, Dewhurst, Wyse, Weston, Hathaway, Rouse, Plumbridge, and Carr. The following were elected officers for the year: London Committee, Messrs. Chas. Cooper, J. Dewhurst, E. Hathaway, A. Silver, G. E. Weston, N. Barker, G. W. Fawkes, F. Wyse, A. C. Rouse, J. Dobson, W. Cook, G. Crabb, W. Gladwin, and J. Best; Provincial committee, Messrs. J. F. Hills, W. Swaysland, W. T. Plumbridge, D. Bentley, J. Walsh, and P. F. M. Galloway; chairman, Mr. J. Robson; vice-chairman, Mr. H. J. Fulljames; auditors, Messrs. Chas Cooper and Allen Silver; hon. solicitor, P. Nicholls, Esq.; hon. treasurer, Mr. T. R. Trower; hon. secs., Messrs. A. Plumbridge and J. P. Carr. This closed the business of the annual general meeting. A committee meeting was held, Mr. Robson in the chair. Letters were read from Messrs. Hurst, Best, and Francis. Mr. Wesley Page very kindly offered a gold medal, to be presented to the member that proposes the highest number of new members during the year. Mr. Trower very kindly offered a silver medal for runner-up. It was proposed by Mr. Cooper, and seconded by Mr. Hathaway, that six be the minimum to win the gold and three to win the silver medal. It was the unanimous feeling of the committee that the club should encourage the exhibiting of Albino and rare-feathered birds, and it was thought that if more of the principal shows would give a class for such specimens they would fill and be a great attraction. With this object in view Mr. Hathaway proposed, seconded by Mr. Weston, that this club offer a gold medal for most points gained by a member throughout the year, providing not less than six shows held under the club's patronage give a class for Albino and rare-feathered specimens. Mr. Trower offered a silver medal for 2nd most points, and Mr. Weston offered a silver for 3rd most points under same conditions. Proposed by Mr. Cooper, and seconded by Mr. Maxwell, that the following be added to rule 18: "Albino and rare-feathered specimens cannot compete for the club's ordinary cups and medals, and may only compete in classes provided for such birds. The question of uniform show cages was discussed at some length, and it was decided to invite cage-makers to send a sample Finch cage. The pattern most in favour is one slightly bowed at top with seed receptable one end, the water-tin outside at same end, and perfectly plain perches. Note: Cage-makers desirous of sending samples should address them to "The Napier," 25, High Holborn, W.C., not later than March 14th. Mr. Goodchild promised to give a lantern lecture, providing arrangements could be made for the apparatus. The following new members were elected: Messrs. W. Quantrell, Watford; H. J. Chittenden, Bradford; D. Duncan, jun., Harlowgate; R. Carter, East Dulwich; E. Fullbrook, Reading; and F. Vincent, Borough High Street.—PLUMBRIDGE AND CARR, Hon. Secretaries.

THE CAGE BIRD UNION ANNUAL MEETING.

(*Concluded from page 217*).

"That on all future balance-sheets the expenses incurred by the Council and delegates be shown separately."—This was agreed to. The remaining suggestions were rejected.—Mr. Bradshaw asked if Mr. Curtis meant that his Society had not confidence in its delegates? Societies sent what they considered their best man, and they ought to be satisfied with what he did; if he did what they considered wrong, they must pull him up.—Mr. Curtis said it was possible under the present system for a minority to elect a representative over a majority.—Mr. Bradshaw insisted that it was still quite possible for a small Society to have the best man.—Mr. Wilson said that the idea was for one Society to have only one vote. A Society secured its vote by electing a delegate. If the proposed alteration took place a big Society would be able to out-vote a little one.—Mr. Hadwin proposed that the matter be left as at present.—Mr. Wilson seconded, and this was carried, only one opposing.

Rule 17.

Many suggestions respecting Rule 17 came from one Society or another, and on these coming up for discussion, Mr. Bradshaw proposed that Rule 17 be abolished altogether.—Mr. Raynes thought the present wording of the rule needed to be altered in some way, because members of the different Societies were not allowed to show anywhere, and the people who were not members of the C.B.U. could show where they liked. He thought they were handicapping the affiliated member. It was also known, he said, that members of affiliated Societies were showing at non-affiliated and non-licensed shows. He did not think it fair that these people should be showing up and down the country, and no apparent attempt being made to deal with them. He (Mr. Raynes) thought this important rule was the backbone of the Union, and considering the number of letters that had gone through the Press at various times, something ought to be done.—Mr. Heaton (Crewe) said that it was discussed at the last meeting of his Society, and they thought it was the means of keeping men away from Societies. He met men who told him that they were allowed to show where he was not, simply because they did not belong to the Union.—Mr. Bradshaw said he did not believe in interfering with the individual. They had pretended to stop members from showing, but two of the delegates had stated that members were not loyal. He said it had affected his Club very much.—Mr. Curtis said it was the Yorkshiremen who were feared in this connection. He thought some terms ought to be come to with the Yorkshire Union. He would like to suggest that they combine in the matter of accepting each other's exhibits, as they could not expect the Yorkshire Union, being the older body, to come into the C.B.U.

A Difference of Opinion.

The Secretary stated that he had written to Mr. Hammond, who replied that the only trouble was that the Yorkshire Union would not abide by the C.B.U. rules; and the Executive Council had decided that if they would not abide by the rules they could not be admitted. There was nothing to prevent their giving a licence to Halifax when they were asked to do so. But the difficulty lay in their wanting a licence from the C.B.U., but at the same time wanting to hold the show under their own rules, which the Council of the C.B.U. could not agree to. He thought some friendly arrangement might be made, by means of which members of the two Unions could exhibit at each other's shows through licences. He should be very pleased if they could be approached again, as it would do away with the hardship of Rule 17. We feel it far more in this part, continued Mr. Lythgoe, than they do in the South, because so many want to show in Yorkshire and cannot. The Yorkshire Union say their rules must be paramount, and the Council of the C.B.U. say that theirs must be. He further stated that where cases of members exhibiting at non-affiliated shows had been reported to him, the offenders had been duly warned, and in cases of a second offence had been suspended. He told the delegates that if they knew of any cases of infringement, it was their duty to report them, so that they might be dealt with. Offences left unreported they could not be expected to know of.

Messrs. Wilson, Colman, and many others contended that if Rule 17 were deleted, the downfall of the Union would be certain.—In the end, the delegates decided, by a considerable majority, that Rule 17 must remain unaltered.

Out of Rule 17 arose a suggestion to amend it by restricting the compulsory affiliation clause to Canary men alone, or in the alternative to Canary and British bird men, leaving Foreign bird exhibitors free to become affiliated or not, as best pleased them. But the meeting would have none of it; in fact, Rule 17 in its old form had already been determined upon.

GRANTING OF LICENSES: Mr. Colman proposed that no Cage Bird Society pure and simple should be granted a licence, but only mixed shows. — Mr. Wilson (Leeds) seconded, and this was carried unanimously.—Mr. Colman said he had an instance in mind where a Society had had a licence for two years, and yet was a Cage Bird Society pure and simple, and as such ought to be paying about 15s. or 20s. to the Union.

THE BALANCE-SHEET: Mr. Steeple proposed that every delegate be supplied beforehand with a copy of the balance-sheet, so that he could consider it before attending the meeting, and be prepared to criticise it.—Mr. Colman seconded, and this was carried unanimously.

PLACE OF ANNUAL MEETING: Mr. Curtis moved that it be left with the delegates to decide by vote where the next annual meeting should be held.—Mr. Nadin seconded.—It was carried unanimously.

An interesting point came up for discussion, viz., if two partners show together, and pay two subscriptions, and do not live in the same house, how should their points count? The general opinion was they should be equally divided.

PRINTED NOTE PAPER AT COST PRICE

Until further notice we have decided to supply artistic Memorandum Forms with name, address, twelve words of particulars, and block of any special variety, at the following cheap cash prices:—

250 for 2/-, 500 for 2/6.

Carriage paid to any address in the U.K.

Our latest style of note-head has been universally admired, and we will gladly send specimen to anyone enclosing stamped addressed envelope.

F. CARR, "Cage Birds," 154, Fleet St., London.

The Cage Bird Union: Annual Meeting of Delegates.

Report of the Proceedings at Manchester, Feb. 22nd.

The annual meeting of the delegates to the Cage Bird Union was held in the Deansgate Hotel, Manchester, on Saturday last, February 22nd. The weather, as usual, was once again of that particular brand which serves to endear Cottonopolis to the stranger within her gates. This is the third occasion on which it has fallen to our lot to write an account of the doings of the C.B.U. in the great Lancashire city, and the elements have given us a warmer welcome every time. It was bad enough on the first occasion, worse at the second, but surely this, the third time, "paid for all," as it is popularly reputed to do. Heavens! what weather. The wind blew a X X X hurricane; its violence brought us to a standstill one moment, bowled us along at 50 miles an hour the next, and then deposited us in a heap on the floor. At times the rain came down in such torrents as to make us think a water-spout had burst overhead, and when the Clerk of the Weather got weary of this, hail-stones like huge marbles crashed into our face with more force than ceremony, and threatened to demolish for ever the last remnants of our youthful beauty. And all the time the chimney-pots and the tiles from off the houses, and showers of broken glass from blown-in windows, scattered themselves over us in generous profusion. When we made a last mad dash for the shelter of the friendly Deansgate Hotel, our heart was in our mouth, and it took a whole glass of milk to wash it down again. Should there be a portent in the warring of the elements, thought we, what a lively meeting we are in for! But we were dis—— well, no, we won't admit that, but truthfully record the fact that the proceedings passed off with conspicuous quiet, without noticeable jar or hitch, and with a success that once again bears striking testimony to the talent for organisation possessed by Mr. Lythgoe and his Manchester confreres.

In the room we found assembled 28 delegates from different parts of the country, with the President, Mr. W. A. Bladon, in the chair, supported by the secretary, Mr. G. W. F. Lythgoe. The meeting was by no means "packed with Manchester people," as someone recently told the writer would be sure to be the case, seeing that in Manchester the meeting had been fixed to be held. It was a meeting which could be said to be representative of all England, seeing that only the West Country had no delegate there.

The Attendance Book.

The Delegates present were:—Messrs. R. Rhodes (Nottingham); W. W. Freestone (Norwich); A. Brown (Gateshead); J. Wilson (Leeds); S. Hadwin (English and Welsh Border Fancy Club); R. J. Pretty (Cinnamon Club); O. Stringer (Salford); C. C. Blackshaw (Altrincham); Jno. Nadin (Rochdale O.C.); J. Garner (Stockport); A. Bradshaw (Sheffield); W. P. Turton (Bury); J. Raynes (Norwich Plainhead Club); John Trengove (Accrington); J. C. Heaton (Crewe); David Bentley (Great Harwood); James Law (Rochdale Good Intent); Fred Steeple (Oldham); Henry Smith (Littleborough); C. Roberts Junr. (Blackpool); H. Parkinson (Bolton); W. Roslin (Mansfield); John Bennett (Wigan); W. H. Colman (L.C.B.A. and Wimbledon); A. W. Curtis (City and Suburban, London); J. Balshaw (North Manchester); A. Crew (Bramley, near Leeds); and Parker Robinson (Barrow-in-Furness).

Business of Importance.

The first business was of no little importance, viz., the adoption of the Executive Council's report for 1907, and the balance sheet for the like period, the latter subject to the auditor's confirmation, and being issued for criticism or comment to all affiliated societies. The cash side of the Union seemed to be in a healthy state. Here, however, is the report in detail.

Annual Report of the Executive Council.

The Council submit their report for the year 1907.2; 131 Societies have affiliated themselves to the Union, and 91 have been granted licences for their Shows—against 118 affiliated Societies and 57 licences last year—making a total of 222 Societies which have come under the control of the Union this year.

Three or four Societies have had to be refused licences, on account of their dates clashing with Shows already fixed. But it is hoped that this state of things will be remedied, and clashing done away as far as possible, by the making of a rule providing for the holding of District Committee meetings for the purpose of amicably fixing Show dates, due regard being had to old-established recurrent dates, and such dates as have been already fixed. It is proposed to invite all Societies having previously had licences to affiliate in time to join in the arrangement of these dates; any applications for affiliation or licence after these meetings not to be accepted unless the Show date does not clash with one already fixed.

As agreed at the last General Meeting, voting papers were sent out to all affiliated Societies on the question of retaining Rule 17. Out of 92 papers returned, 72 were in favour, 20 against. The Council believe this Rule to have worked very well as it stands, and do not suggest that it should be amended at present.

Voting also took place on the definition of a Novice or Amateur, and the following received the most votes:—

"A Novice is one who has never won a First prize in open competition or three First prizes in open novice classes."

This definition has been adopted by many of the Specialist Clubs and most Shows giving Open Novice Classes, but it can hardly be satisfactory until all Societies adopt the same definition. The Council recommend the addition of the words "up to the date of entry" at the end of the definition, so as to avoid any question on the legality of an exhibitor showing as a Novice, who, between the time of entering and exhibiting at a Show, handicaps himself by winning the required prizes.

The Council decided that when reprinting the Show Rules, suitable advertisements should be put on, to reduce the cost and to further the funds of the Union. Tenders were advertised for, and letters written to several likely firms, including the Fancy papers. The offer of the Editor of Cage Birds to print 100,000 free of cost, and pay a lump sum for the privilege of his advertisement, was the best, and was accepted by the Council. A further batch of 50,000 was printed on the same terms.

Several amendments to the General Rules are recommended to be passed at this meeting. Particulars have been given in the notices calling the meeting sent to the delegates. A number of suggestions have also been received from various bodies, for discussion at this meeting, which, if agreed to, will require to be submitted to and voted upon by all the delegates.

Two suspensions have been made, one of which (Mr. J. T. Dore, of Newcastle, for the remainder of the show season), has now expired, and another (Mr. J. W. Nicholson, of Newcastle) who, already suspended by the Union, has been further suspended permanently. The Council have also had to censure one Society (The L.C.B.A.), for breach of faith in mutilating the leaflets containing the Union's Show Rules before sending same out in their Schedules.

The funds of the Union show a healthy increase. £44 12s. 10d. has been received in subscriptions, £22 10s. in license fees, and the sale of show rules and the amount paid for the advertisement thereon have brought in £16 4s. 1d. The total receipts amount to £87, and the expenditure to date £43 8s. 9d. The balance in hand at the present time is £56 12s. 7d.

The Council desire to express their appreciation of the valuable assistance and suggestions made by Mr. H. R. B. Tweed, and regret that he is unable through pressure of business to continue the office of hon. solicitor to the Union.

One member of the Council, the Rev. W. Rickaby, has resigned office, Mr. A. Brown, of Newcastle, being elected by the District Committee in his place.

After some discussion (detailed below) on the question of delegates' expenses, the report and balance sheet were adopted as read, practically unanimously—we say "practically" because there looked to be one or two non-voters.

Filling the High Offices.

On the question of the nominations for the posts of President and Secretary for 1908 coming up, it transpired that only Mr. Bladon had been nominated for the former position, and so he was declared re-elected. The question of the secretaryship, however, was quite of the secretaryship, however, was quite another sort of problem, and Mr. Lythgoe's very definite refusal of the position, backed up by reasons that could not be ignored, cast a sort of gloom over the meeting—until, that is, ways and means were happily found out of the impasse.

Mr. Rhodes was the only nominee for the post apart from Mr. Lythgoe, and when the latter gentleman's continuance in office seemed remote, one of the delegates said, with despair in his voice: "May we take it that Mr. Rhodes' refusal of the secretaryship is definite?" "You may," quietly replied Mr. R., but with such a world of meaning in his voice that the meeting indulged in a hearty laugh.

Much merriment also arose when Mr. Lythgoe, in mentioning the "overtime" the Union's work involved him in, said that he remarked long ago to the President: "Mr. Bladon, if you were only my father you would be the first to say, 'You won't do it a day longer.'" Mr. Bladon, with a sly twinkle in his eye, interjected: "Ah! my lad, but I am not." Whereat we all chortled.

And all ended happily. It would have needed a harder-hearted man than Mr. Lythgoe to resist the kindly persuasion put upon him. So with a solatium of fifteen guineas, a typewriter, and *carte blanche* as regards the calling in of necessary clerical assistance, the Cage Bird Union sets out on another year under his able guidance.

The Delegates Legislate.

We next found ourselves faced with the serious business of considering alterations of rules and procedure. From our appended detailed report it will be seen that the close of the Union's year was brought forward one month, and with it, of course, the date on which the annual meeting is to be held. The latter, by-the-bye, it is proposed to move about the country, Nottingham being mooted as the next likely centre, but the exact place will be decided annually by vote of all the delegates. Five shillings, at least, of the annual subscription payable by each affiliated society must in future be paid by the 1st of February, and societies with this unpaid cannot send a delegate to the meeting of the District Committee when sitting to discuss and arrange, where possible, the show dates in their district to avoid clashing of fixtures in the same.

The need for dealing with "clashing" was emphasised by Mr. Brown (District No. 1), who said that on the same day last season one affiliated and two licensed shows were being held in his district, within a radius of 30 miles. It may be fitting to mention here that the meeting also decided that in future licences shall not be granted to any society devoted solely to cage-birds, but only to "mixed" societies; all cage-bird societies must affiliate therefore, or remain without the Union's support. Further, affiliated societies will always be given preference in the matter of dates over merely licensed shows.

A Lancashire Breeze.

Things got a little lively and personal when the suggested arranging of show dates was under discussion, but on the interposition of the chairman the breeze died down at once. Lancashire shows would seem to have some little difficulty in avoiding clashing. Accrington, Blackburn and Rochdale O.C. all seem to have been involved last season (two of them, we believe, threaten to clash this), while Preston were described as "bobbing about" first in this month, then in that. The Accrington representative, whose society got badly squeezed last year, declared that the Rochdale men were a society of "homers," for they exhibited only at their own show, not supporting other fixtures as they should, and on this ground he held they did not deserve consideration on the matter of their show date. His views stirred up one or two other fanciers present, but the atmosphere quickly cleared when Mr. Bladon promptly ruled this aspect of the matter "out of order."

District Committee's Added Powers.

The meeting then proceeded to discuss and adopt a new rule giving District Committees power to investigate complaints of fraudulent or discreditable conduct, and administer such punishment as they think fits the case, but subject to certain conditions, right of appeal to the Executive Council being one. The deposit was fixed at £1. It seemed the general opinion of the meeting that the committee on the spot was the best qualified to deal with such matters as this rule had been framed to cover.

Further Additions.

An addition to Rule 7, whereby a special general meeting of the delegates may be called at any time, providing a requisition is signed by not less than five district committees, was agreed to without discussion.

A clause empowering the Executive Council to appoint a secretary pro. tem., through the illness, death, or refusal to act of the elected secretary, was also accepted without comment.

The Suggestions Sent in for Discussion.

The "law-making" having ended for the nonce, the list of suggestions sent in by various district committees and affiliated societies came up for discussion. The Secretary (Mr. Lythgoe) pointed out that these suggestions could be discussed, and adopted or rejected, but could not be "made law" by that meeting, it being necessary for any which might be adopted to be sent out and voted upon by the whole body of delegates. It is our purpose to mention here only the more important of the said suggestions, and tell briefly the fate that befell them. Many of the suggestions, too, as will be seen on perusal of the full list printed on page 157 of our issue of February 15th last, covered identical ground, and therefore the disposal of one often served to dispose of several others.

Railway Rates.

The question of possible reduction of charges for carriage of exhibits to and from the shows, and of getting reduced fares for fanciers travelling to shows, came first, and was probably the most important on the whole list. But the statement of the Secretary, who had been in communication with the officials of other powerful bodies such as the Homing Union, the Pigeon Club, and the Kennel Club, quickly served to dispel any hope of advantages being gained in this direction. Mr. J. W. Ramsden also wrote pointing out that as the High Court in a recent decision had held that the charges made by railway companies for the conveyance of livestock were "reasonable," it could hardly be expected that the companies would reduce them. Mr. Lythgoe detailed the great efforts made by the above-mentioned bodies to secure for their members the advantages they themselves would like to obtain, saying that the companies' superintendents were waited upon by an influential deputation in the Railway Clearing House, but after consideration reported that they were unable to grant the concessions asked. Where the others had failed, he did not see that they could hope to succeed. One delegate spoke of "boycotting" the railway companies; but did not suggest how we were to get along without them supposing the threat of boycott failed to take effect. With his sentiment that "we ought to tackle 'em," the meeting seemed agreed, and everyone hoped, with him, that they would eventually "snuff 'em." It was decided to co-operate heartily with any other Fanciers' Association or Club to this end. It was also suggested to try and get the companies to book birds "return," so that they might return home by the route sent, and not, as sometimes happened when another company "collared" the hamper at the shows, by a longer, more devious, route.

Late Entries and Advertisements on Rules

A suggestion was down to restrain show officials from accepting entries after the advertised date of closing. The mover instanced a serious muddle at a show in the south last season as proof of the necessity of adopting it, saying that the manager there got into a hopeless mess through taking entries to within two days of the show being held. But the delegates were unsympathetic, and the motion was quickly and emphatically "cold shouldered."

The question of having advertisements on the rules issued by the Union was discussed, and the general feeling seemed to be that the Union was not so well off as to be able to afford to neglect such a source of revenue. The suggestion "that no advertisement appear on the rules or any other printed matter," was thrown out with only two dissentients.

The "Hated" Rule 17.

The "Hated Rule 17," as it has been termed, promises to become a "hardy annual" so far as discussion on it is concerned. It reared its unblushing head this day and some strangely differing views were expressed respecting it. Some delegates said: "Do away with Rule 17, and you strengthen the Union"; others said: "Strike out Rule 17, and the downfall of the Union is certain." And we will leave it there, only staying a moment to record the fact that on a vote the delegates by a considerable majority were in favour of Rule 17 standing exactly as it does at present.

Who's Who?

When the question of establishing the bona-fides of delegates attending the annual meeting was under discussion, Mr. Curtis was able to give a practical illustration of the point involved, being the bearer of a letter from his society setting forth that he was the "duly accredited, fit and proper person," as it were, to represent the same. It was the opinion generally that the bona-fides of everyone voting ought to be established. Mr. Bladon pointed out that an attendance book was being sent round for all present to put their names in, and he raised a laugh by saying: "I am afraid we are too credulous round here; in Manchester we believe everybody straight-forward."

"Nabbed."

The question of C.B.U. representatives at the shows wearing a distinguishing badge was also discussed, but it was felt that the possible advantages accruing from doing so, were likely to be outweighted by disadvantages, and it was decided to leave matters as before. It was pointed out that the secretary of the show (and probably any of the officials) would at once point out the C.B.U. representative to those who wanted him. Mr. Steeple raised a hearty laugh by relating how at one show a "man in blue" took him in hand as a "suspicious character," and as he had no official card to produce, the secretary of the show had to be fetched before the policeman would release him!

The Verdict.

The meeting sat from half-past three to close upon eight o'clock without a break (to say nothing of the previous meeting, at 2.30, of the Executive Council), and at the close a hearty vote of thanks was accorded Mr. Bladon for presiding with such affability and success, and to Mr. Lythgoe for his strenuous and able work in the arduous role of secretary during the past year. Then to a splendid "high tea," which disappeared in record time, and served to bring to an enjoyable close what seemed by everyone present to be considered a thoroughly successful meeting, and one well calculated to launch the C.B.U. in the happiest possible manner into another season of good work for the benefit of the Fancy.

The Proceedings in Detail.

Balance Sheet and Delegates' Expenses.

The minutes of the previous annual meeting held at the Crystal Palace were read and passed. After the balance-sheet had been read, Mr. Curtis (City and Suburban) referring to a sum of £15 5s. 10d. given as travelling expenses, asked how much of that sum had been spent on the expenses of the delegates.—The Secretary stated that the delegates' portion amounted to £9 3s. 11d., and the railway expenses of the Council to £6 5s. 11.—Mr. Curtis considered it rather a heavy amount. In getting delegates about in London they came to the decision that no delegates' expenses should be paid unless they travelled over five miles. Probably some of the delegates might have to travel much further than the London people. If that was the amount of the delegates' expenses independent of the Council, the Council must have been very economical.—Mr. Wilson (Leeds) said that, judging from his own experience of district committees, the amount was a small one. In his district they had to send a man from Hull to Scarborough, from Scarborough to Sheffield, and they always arranged, as far as possible, to minimise expense. There was always a difficulty in finding men for mid-week shows. Men could not be got to take mid-week shows, because in most cases they were not in a position to spare the time from business. Mr. Wilson pointed out that in his own district there was only one man who could be relied upon to take them. He considered that the item was a very satisfactory one.—Mr. Freestone (Norwich) considered the expense was a small one, and pointed out that many had worked for nothing, paying their own expenses.—The Chairman at this juncture pointed out that all items would be inspected by the auditors before the balance-sheet was printed and sent out.—Mr. Colman (L.C.B.A.) thought it was premature for them to pass the report before the delegates had had a chance of reading it. It seemed to him a little bit quick. He said there were several items they might like to look into

USE OUR PICTURE POSTCARDS.

The Chairman stated that the balance-sheet would be sent out to the Societies.—Mr. Rhodes interposed: "We only want the report to be adopted, and it is for this meeting to adopt it or reject it.—Mr. Bradshaw (Sheffield) moved the adoption of the balance-sheet as read.—Mr. Garner (Stockport) seconded, and it was unanimously agreed to.

Election of President and Secretary.

Mr. W. A. Bladon was again unanimously elected President.—Mr. Lythgoe had intimated to the Council that he was not available for election to the secretaryship, and at the meeting he pointed out that he had considered it very seriously, and in view of the fact that he was no longer in business for himself and that the duties of office necessitated much work at late hours of the night, he thought that in the interests of his own health it would be better to resign office.—Mr. Bradshaw said that Mr. Lythgoe's resignation would place them in a very awkward position, as they did not know each other sufficiently well to nominate one of themselves. Mr. Lythgoe would know best himself whether or not he ought to continue office. He (Mr. Bradshaw) for one would press him to do so, but did not feel like compelling him, although he did not know anyone else to take the job.—Mr. Rhodes said he was satisfied that it would be a great misfortune if Mr. Lythgoe absolutely refused to hold office any longer. The Union had had its birth in Manchester, and had been worked up by Mr. Bladon and Mr. Lythgoe, and it would take a considerable time for any stranger, whatever his ability, to get such a grip of the working of the system that Mr. Lythgoe had. He wished some means could be found by which Mr. Lythgoe might be rendered the necessary assistance. He thought it was too much to expect a man to undertake the arduous duties of secretary unless he were paid something like a fair salary.

Mr. Lythgoe said he had not been thinking of the money so much, though he would say plainly that the office was anything but a well paid one. It was their first working season, however, and they had given him what he had asked for. He was thinking more of his own health, which was not very robust, and scarcely equal to the present demands of office. This winter he had had to devote far too much night work to his duties, with the result that his health had been affected. He did not see how he could possibly undertake the work unless he were allowed a typewriter, and empowered to secured paid clerical assistance. In conclusion, he suggested sending out fresh nominations for the position.—Mr. Bentley (Great Harwood) pointed out that the Union had £53 in hand, and wanted to know why the amount should be hoarded up instead of being spent on the good and efficient working of the Union. If a typewriter and paid clerical assistance were needed, why not use some of the surplus in hand for that purpose? This would have to be done in any case, and why not do it now, and so retain Mr. Lythgoe's valuable organising abilities?—Mr. Raynes (Norwich Plainhead Club) also spoke to this effect, and suggested that the secretary could call in a shorthand writer, dictate the correspondence, and thus save himself a good deal of clerical work. He thought Mr. Lythgoe ought certainly to be persuaded to stay on at least another year.

Mr. Rhodes said he felt that this was the most critical time in the history of the Union. To have a change of secretaryship would probably cause the Union to go back. If they could by any possible means retain Mr. Lythgoe in that office, they ought to do so. If the diffiencity could be met by the purchase of a machine, and by empowering Mr. Lythgoe to obtain what assistance he considered necessary, he thought it would be doing the best thing to secure him on these terms. He suggested, also, that the secretary be paid something for his services. The amount voted to him (£5) was not sufficient. He thought very strongly that it ought to be increased, a typewriter purchased, and authority given to the secretary to secure a typist. If the secretary could be induced to continue office on these terms, he was inclined to support it heartily.—The Chairman invited a full and free expression of opinion on the matter, but all the delegates seemed inclined to agree with the previous speakers, and at last, on the motion of Mr. Bentley, seconded by Mr. Garner, it was unanimously decided that a salary of £15 15s. per annum be paid to the secretary, that a typewriter be purchased, and that he should be empowered to procure clerical assistance whenever necessary. Under the great pressure brought to bear on him, Mr. Lythgoe agreed to continue office, and this decision was greeted with acclamation by the assembled delegates.

Revised Version of Rule 4.

Every affiliated society shall pay to the funds of the Union a subscription at the rate of 2d. for every member on the books of such society. Such subscription shall not be less than 5/-, nor more than £1 1s. The sum of 5/- shall be due and payable on account of such subscription on the 1st of February in each year, and the balance of such subscription shall be payable on or before the 1st of September in each year. The Secretary of every affiliated society shall furnish to the Secretary of the Union, for purposes of registration, a list showing the names and addresses of its members, on or before the 1st of September in each year. Such list may be added to after registration on payment of the increased amount of the subscription (if any) becoming payable by reason of such addition.

In connection with this Mr. Lythgoe suggested that the year be altered to end in January, and that district committee meetings should be held as early as possible in February. Some secretaries of Societies might raise an objection on account of the Union getting a year's subscription for only nine months, but he thought the year should expire in January. He said he had been repeatedly asked when the year started and ended. He pointed out that at present a Society might send a delegate to this meeting, pick a date, and afterwards back out of the Union, to the detriment of others. This accounted for the requiring of at least 5s. of the annual subscription being paid before any Society could send a delegate to the district committee meeting held for the consideration of show dates. The year was fixed to end in March because they wanted it to expire at the end of the show season. If it expired in December it would be right in the middle of the show season. January 31 was practically the end of the season, as only the Palace Show ran on into February.

Mr. Wilson proposed that the alteration be adopted.—Mr. Freestone (Norwich) seconded, and it was carried unanimously.

New Rule to be inserted between Rules 13 and 14.

Each affiliated society shall, not later than the month of January in each year, submit to the Secretary of the Union the date proposed for the holding of its open show or shows, and such date shall be subject to the sanction of the district committee governing such society, and shall, where possible, be altered or abandoned in accordance with the ruling of such district committee at a meeting specially called for the purpose. No affiliated society whose instalment of 5/- of its subscription to the C.B.U. is unpaid, shall be permitted to send a delegate or delegates to the meeting of the district committee at which the fixing of Show dates is to be considered. No society can become affiliated or receive a licence after the said month of January, unless the proposed date of its show does not clash with that fixed by the district committee for any other affiliated society's show.

The Secretary pointed out that it was not intended that there should be anything arbitrary about this rule; it was merely to help them to fix up dates that should not clash.—Mr. Bradshaw moved that it be not entertained, as, if the resolution were passed, they might be twitted with the remark that the Cage Bird Union was going to "boss the show." He considered that members of any individual Society knew best what dates would best suit their purposes for shows, and it was for them to decide when they should hold a show. If two clashed, the weaker would go to the wall, and would look out another time and find a date more suitable. Mr. Lythgoe said he did not think the weakest ought to go to the wall, and this could not happen if another date were offered them in the first place. In the case of Cockermouth and Carlisle there were only five shows in the district in the whole season, and yet these two shows picked on the same date. A district meeting would have done away with this altogether. He wrote to both Societies, and suggested that they should see each other and alter the date, but to no purpose. The alteration of this rule would have settled this difficulty in an amicable way.

To Clash or not to Clash?

Mr. Brown (Gateshead) said that last year they had in District No. 1 several shows clashing within a very short distance of each other, with the result that one went to the wall altogether. If such arrangements were made as suggested here, they would have fixed on a date offered to them, and he had no doubt that they would have gone on alright. In another case they had a show where the entries were such as made it not worth while to carry the thing on. Then they had affiliated and licensed shows (three in all) holding fixtures within a radius of thirty miles on the same day. The people in the districts were much better able to know and deal with this than the secretary, and he had no doubt it could be properly arranged. He had been asked specially by one Society to come and state their case. Last year the affiliated Society clashed with a licensed show, and both Societies had fixed on the same date for this year. If the Union did not interfere in these matters, what was the good of the Union? He therefore moved that the proposal be adopted.—Mr. Wilson seconded.

Mr. Bradshaw remarked that his Society had already fixed a date and engaged judges and hall. He supposed others would have done the same. How were they to go on when the halls were engaged, with the judges as well? He thought they could not tell a Society to fix its show on another date unless they could say that judges should be at liberty on that date; and it would not be fair to say they must hold their show and we shall pick your judges!—The Secretary pointed out that the words "where possible" left them able to settle such a matter amicably."—Mr. Brown said he did not think the Union intended to dictate to the Societies when they should hold a show. It was only intended that the district people should meet and settle the matter in a friendly way. Where an older Society had had a date for years, however, it would not be to their interest to let the younger Society take that date. If it was understood among the clubs, it would be an easy matter to have a meeting called and arrangements made to suit everybody. Dates would be sent to the secretary, and submitted by him to the district committees, who, by having all the dates before them, could easily pick another date which would not clash with one of the other Societies.—Mr. Bradshaw said that assuming No. 1 District met and fixed their dates—he would call it Lancashire instead for the sake of example—assuming Lancashire met and fixed up their dates, which were agreed to, and Cheshire also met, and they were also agreed. But supposing then that Manchester and Altrincham (about 7 or 8 miles apart) were found to have fixed on the same date, how was that going to be prevented? If either of these clubs' dates was going to be altered it would throw the whole thing wrong in both districts. Though this resolution may not be arbitrary, he continued, the district delegates have the power to make it so; they may not to start with, but later on they may.—Mr. Freestone said it would make it very difficult in the case of his Society (Norwich), because the hall was fully booked up except on the two days fixed upon. As they were 200 strong, they could depend the members would have their show, even if they went against the Union.—Mr. Curtis said that in London the halls had to be booked very far in advance, and it would be a very serious thing for some societies to have to forego their dates, and the arranging might not work. If the delegates could agree among themselves to arrange the show dates, it would be a good thing to do, but this year preference should be given to those Societies which had fixed their dates. He thought preference should always be given to the affiliated in preference to the merely licensed.—Mr. Rhodes said that one of the objects of the Cage Bird Union, as could be seen by referring to Rule No. 2, was to prevent clashing as far as possible; it seemed to him that something ought to be done in the direction indicated. There might be a little friction just at the present time, but he thought it would settle down and work smoothly afterwards. In his own district (No. 7) what had already been done was to communicate with the Societies and invite the secretaries of those different Societies to propose the date they which to hold their show upon. Following on the point mentioned by Mr. Curtis, if it did happen that they stuck and could not get on, it might be referred to the president and secretary of the Union. He thought he could not do better than suggest that; there might be a case rather hard, but they would have to deal with it as well as they could. He urged that it was not possible to frame a law that would not fall hard on somebody but they ought to look after the interests of the greatest number. They made a point of fixing the Nottingham Show on a certain date, and where another town in the district fixed on the same date he wrote to the secretary, and had always got him to alter the date without any trouble.—Messrs. Roslyn, Hadwin, and Colman commented briefly on this rule.—Mr. Trengove mentioned a case where Accrington had clashed with Rochdale, and much trouble and disappointment had been caused.—The proposal was eventually carried, only two voting against.

Rule for Insertion after Rule 8.

A district committee shall have power at any time to hear and investigate any complaint of fraudulent or discreditable conduct in regard to a bird, or any matter whatsoever connected with or arising out of a bird show, or any matter relating to the same, or to these rules, and may pass such resolution thereon as it may think fit, and it shall have power—subject to the right of appeal as hereinbefore mentioned, and subject also to the confirmation of the sentence by the executive council of the C.B.U.—(a). To suspend any person from taking part in, or having any connection with, any show held under C.B.U. rules, or attending the same. (b). To publish the fact of such suspension and the account of the proceedings in the Fancy Press. All complaints under this rule must be accompanied by a deposit of £1, which may be wholly or partly awarded to the person or persons complained of if the complaint be dismissed, or otherwise it shall be returned to the depositor. Any costs, charges, or expenses incurred by a district committee in enforcing this rule shall be borne and paid by the executive council of the C.B.U.

This created but little discussion, the general feeling seeming to be that it was a move in the right direction. What few remarks were made concerned chiefly the amount of the deposit, some thinking £1 was too high. It was eventually fixed at this sum, however, one reason for this being the desire to render the making of frivolous or groundless appeals and complaints as remote a contingency as possible. One delegate remarked: "If a man's honour is not worth staking £1 upon, then it can't be worth consideration at all." Mr. Freestone moved and Mr. Nadin seconded the motion, which was unanimously carried.

Addition to Rule 7.

On a requisition signed by five district committees, a special general meeting of the delegates shall be called for the discussion of any matter connected with, or affecting the interests of the C.B.U. Notice of such Annual or Special meeting shall be sent by the secretary of the C.B.U. to all delegates entitled to vote, seven days before the meeting.

The above addition to Rule 7 gave rise to little or no comment, its purport being obvious, and on the motion of Mr. Wilson, seconded by Mr. Garner, it was unanimously adopted.

Concerning the Secretaryship.

In the event of the death, retirement, or incapacity, or refusal to act of the secretary, the executive council shall have power to appoint an hon. secretary pro. tem., to perform the duties of secretary until the ensuing annual general meeting, by votes in writing signed by each member of the executive council and lodged with the President of the Cage Bird Union.

This resolution was recognised as a very necessary one to be on the books, and it was passed without discussion on the proposition of Mr. Garner, seconded by Mr. Wilson.

Suggestions made by various District Committees & Societies.

District No. 1.—The question of show dates and their clashing having been dealt with, the suggestion re railway charges and concessions was gone into.

The Secretary stated that he had seen the Editor of the "Homing Pigeon," who was good enough to tell him that a deputation from the "Homing Union" (the wealthiest of all Unions of this kind) and the "Poultry Club," had waited upon the railway clearing house officials, to ask that their members be allowed to travel with small consignments of Homing Pigeons, etc., as personal luggage, and to grant fanciers reduced rates of travel, but they were told that the matter had been carefully considered by the superintendents in Conference, who were unable to grant the concessions asked for. The sec. stated, however, that he had heard that the Kennel Club were doing something with the same object in view, but he did not know exactly what. He could not very well see how the railways could be induced to lower the rates.—They had the monopoly and the result of the deputation mentioned proved this difficulty of the position.—Mr. Rhodes suggested that the sec. be requested to write to these different clubs and tell them that the C.B.U. would be prepared to co-operate with them in the endeavour to secure privileges from the the railway companies. It was a puzzle to him why the railways could not at least grant fanciers the privilege of travelling to and from the shows at reduced fares, on the same lines as the concessions made to anglers. Why the latter should be singled out for favour, and no one else, he did not know. We should have to join fishing clubs and carry rods, he concluded!—Mr. Bradshaw told a little story in which an Angling Society to which he belonged got the better of a railway company by threatening to boycott the line, if the privileges and reduced fares at which the anglers had travelled were in any way curtailed. He urged the Union to take up a similar attitude.—Mr. Heaton (Crewe) asked if the railway companies could not be approached with a view to booking the birds "return" from the shows. He pointed out curious inconsistencies in higher charges being made for the return trip than on the outward journey. It was unanimously agreed that the sec. write the secretaries of the various Fanciers' governing bodies on the lines above suggested.

"Delegates attending shows to be supplied with a Union ticket by the district secretary, admitting to the show on all occasions, while open." This was not adopted, the letter from the district secretary being considered sufficient.

District No. 6.—The suggestion "That an exhibitor having exhibited 12 months at affiliated or licensed shows, shall then be compelled to become a member of the Union," was rejected.

District Committee No. 12.—"That societies and their show managers be not permitted to accept entries after the advertised date of closing."

Mr. Colman stated that at the beginning of last season there was a bit of a mess at one of the shows in the London district, and an enquiry into the matter showed that it was brought about by the acceptance of entries very late. The show manager said that he had accepted them up to two days before the show, and so many came in at the last that it threw the thing "upside down," and he "didn't know where he was."—

Mr. Stringer (Salford) did not see why a sec. should be stopped from sending out "whip-up" cards, supposing his entries to be bad. He instanced one year at his society's show, when the Yorkshire classes were very bad, so that on the Monday night he wrote to about a dozen Yorkshire fanciers to send more in. The result was that he was able to allow the section to stand. If one show manager had taken late entries, and so "muddled up" his show, he did not see why that should prevent others, who knew how to manage better than that, from taking late entries, which often made all the difference between paying and not.—These sentiments seemed generally endorsed, for on the vote the suggestion was rejected by a heavy majority.

Matters of Routine.

City and Suburban A.C.B.: Mr. Curtis, in support of the suggestions made by his Society, said they had gone to a lot of trouble, and spent hours over the suggestions put forward, and they thought they would be beneficial to all concerned in the Union. Too much work could be done by the delegates, and by the Council in particular. There seemed to be a general feeling that more voting should take place among the members themselves on important questions. With regard to the advertisements on the rules, he assured the delegates that this alteration was proposed long before tenders were sent out for the printing (at their last June meeting), so that he hoped no one present would think the suggestion arose from any ill-will. No reflection on anyone was meant in any shape or form. He could confirm this if Mr. Lythgoe could give him the date on which the tenders were sent out.—Mr. Lythgoe informed the meeting that the tenders for advertisements were sent out in August.—Mr. Curtis, continuing, said the Executive Council should be voted in by the members of the Union, and that it should not be left to the delegates to select members of the Council. He thought suggestions and propositions should be sent out in time to allow the delegates to place them before the Societies they represented, and so ascertain the views of all the members. At present it was possible for a member of the Council to be elected by a minority, but if members voted one would thus be elected by a majority of the whole of the district. He thought a vote should be as representative of the members as possible. It was for the delegates to accept or reject the suggestions. With regard to Rule 17, Mr. Curtis said that the majority of London Fanciers were not in favour of the rule, but he believed they were in favour of excluding non-affiliated members from showing. In his opinion, it was the Yorkshiremen they feared. If they could not do without the Yorkshiremen's exhibits, why could not some friendly arrangement be come to with them, providing, of course, that they would abide by the Union's rules? It all seemed to be the outcome of Rule 17, and one got tired of hearing about it.

"That the annual meeting be strictly representative of paid-up affiliated societies, whose credentials shall be examined."—Referring to this question of a means of identification of delegates at annual meeting, Mr. Rhodes considered it would be putting too much on the secretary to expect him to examine the cards of all delegates in order to ascertain if they came from paid-up affiliated Societies, especially those that came in after the meeting had started. It was quite right, however, that only those who had paid up should be represented. He thought the matter would be met if the secretary would satisfy himself that the persons attending the meeting were bona-fide delegates, entitled to vote, say, by the production at the door of the agenda paper sent to delegates. This would no doubt satisfy those who might be afraid that a particular district would run in a number of members in order to carry a motion.—Adopted.

"That all proposed alterations in the rules be sent to the general secretary two months prior to the annual meeting, and sent to all affiliated societies six weeks before the meeting."—Adopted.

"That rules can only be amended or added to at the annual meeting."—Adopted.

Cheap Money.

"That no advertisement appear on the rules or any other printed matter."—Mr. Hadwin proposed, and Mr. Wilson seconded, that the present system of printing be continued.—Mr. Rhodes said he would like to hear from the mover of the resolution what its object was. Why should not the Union save money by this means if possible?—Mr. Curtis stated that the present system created a little jealousy, and they thought that as the C.B.U. was supported by a number of Societies it was well-off enough to pay for the rules being printed without any advertisements on at all. There would then be no likelihood of any suggestion as to favouritism. This, he emphasised, was thought of long ago—as far back as June.—Mr. Lythgoe pointed out that with the new rules which had been passed that day, it would be necessary to have another set printed, and if they could get them printed without any cost to the Union he thought it a very good thing. By allowing some advertisements to be put on, they got the work done free, instead of at a cost of about £10.—Mr. Rhodes said he had only wanted to know the reason for any opposition, and he was now quite satisfied that the present arrangement was a good one, and he thought no attempt should be made to alter it as long as the right of advertising was open for competition, as it was in this case. He did not say it should be offered exclusively to one person, but the Union was right in taking the best price it could get.—Mr. Colman said that may be very well for the rules, but the show rules were also sent out in the same way. As secretary of his Society he tried to get as much as he could for advertisements, and they had a set price, and it was open for anyone to advertise. But these rules were going out with the advertisement on of a certain Fancy paper (which he was not against, any more than he was in favour of any of the others), but that paper had the advantage of advertising on the show rules, and his Society did not gain anything by it.—Mr. Wilson (Leeds) pointed out that by getting those rules at 1s. 4d. a thousand, so far as they were concerned, it saved them one leaf in their schedule, and was a gain to them of 2s8. The Union got the rules printed off for nothing, and by this means alone were enabled to sell them at 1s. 4d. per thousand to Societies. Perhaps the secretary could tell them what they cost the first year.—The Secretary stated that they were sold at cost price the first year, viz., 2s. 6d. per thousand. Now the Societies paid 1s. 4d., and the Union's funds gained £16 out of the show rules and the advertisments alone.—Mr. Freestone could not see any objection to having the advertisement matter on the rules. There was no diffiencity in the way, and the Union made a good profit out of it. How it could be argued that the advertiser got a "free advertisement" he could not understand.—Mr. Hadwin proposed that the matter remain as at present; Mr. Freestone seconded, and this was carried by a clear majority, only two opposing.

(Concluded on page 215.)

OUR ESSAY COMPETITION.

The judges of the essays sent in for our recent competition are giving them their careful consideration, but so heavy and onerous is their task that we cannot promise to publish the full results for another week or two. Competitors can rest assured, however, that we will do this, and so relieve their anxiety, at the earliest possible moment.

CORRESPONDENCE.

PREPARING LINNETS FOR SINGING CONTESTS.

SIR,—I am writing to ask if any reader of CAGE BIRDS would be kind enough to tell me how they train Linnets for contest singing. I have Linnets, and they are good songsters, but I cannot make them sing at any time. Perhaps some reader would only be too glad to say how to train them.

A NOVICE.

THE "DISQUALIFIED" CREST AT ST. ALBANS SHOW.

SIR,—Having noticed Mr. Tyson's letter in CAGE BIRDS, I can fully endorse his remarks, as I sold the bird to Mrs. Pearse, and it has a perfect crest and not a feather wrong. I think it very hard on Mr. Tyson that any accusations should be made against one who has done so much for the Fancy.

O. L. QUINTON.

Great Yarmouth.

A KNOTTY POINT ABOUT HYBRIDS

SIR,—I have to thank "Viola" for his appreciative letter in your issue of 22nd inst., which is very encouraging. I agree with him on the classification, and I am persuaded it would be an advantage if show executives were to provide separate classes for Hybrids, bred between Foreign birds, and for Hybrids bred between British birds. In 1907 many entries were lost, owing to the Foreign bred birds being allowed to compete with Hybrids bred from Britishers. Hybrid showing is in its infancy and ought to be encouraged. Every committee should have a practical Hybrid breeder amongst its members. The want of such even in our large societies is a serious defect, and should be remedied.

THOMAS SMITH.

THE STANDARD LENGTH OF THE YORKSHIRE CANARY.

SIR,—In my letter printed in your issue of the 8th February, I stated that Mr. House had misread the rules of the Y.C.C. and S.Y.C.C., or that he was juggling with the truth; your note at the bottom of my letter refers to the Y.U.O.S. standards. While at the Palace Show I inquired what was the difference between the Y.C.C. and Y.U.O.S., and I was told that the Y.C.C. is a specialist club dealing solely with the Yorkshire Canary, and the Y.U.O.S. are a union of societies which have for their object the breeding, etc., of all varieties of cage birds. However, to make quite sure, I wrote to the secretary of the Y.U.O.S. for a copy of the rules, which he has kindly lent to me, and I find that Clause 2 reads that "the Yorkshire shall not exceed 6¾ inches in length." Therefore I desire to withdraw my statement against Mr. H., as he quoted from the Union book and not the Y.C.C. or S.Y.C.C. books. I shall be glad to learn if Clause 2 was ever voted upon by a body of the Yorkshire Canary Fanciers? If so, why is the clause not printed in the Y.C.C., C.M.Y.C.C., and S.Y.C.C. rule books? Is it to try to prevent judges pulling out the Yorkshires' tails when measuring? This is a thing that has been done! I should like to mention that I saw the bird (which Mr. H. stated was 7⅞ inches long) measured by a well-known Fancier from Bradford, and it did not go 7 inches from end of beak to tip of tail.

W. G. ELSMORE.

BORDER FANCY CANARY CLUB AND ITS JUDGES.

SIR,—Now I am again downstairs, I crave a small space in your valuable columns re the above. I have been astonished each week since the general meeting of the club, held in Edinburgh on the 1st January where this unfair rule was passed, that none of my fellow members of the club have used your columns to protest against it, as I know from letters received that many of them see the injustice of it. I cannot for the life of me see one point, how it is going to advance the club's interest or that the club will be one penny the richer for it. I shall be happy to hear from some one who was at the meeting and heard the views expressed in its favour. Or perhaps the mover of the motion will favour your readers by telling them his idea and how it is going to work out to the interest of all concerned. To my mind it is a step entirely in the wrong direction, and will detract much from the club's honour of equality to all its members. They have enjoyed perfect freedom, which has been the life of our club. But by restricting members down to two shows in the season they are bound to cause friction in every sense of the word. I have heard from a few of my fellow judges and they state that they will take on as many shows as they think fit, and will either resign from membership or let the club expel them after they have judged the two shows. On the other hand, just think of the trouble and expense it will cause societies seeking the club's patronage. They may write to any of the prominent judges who they think will draw a good entry, and find he is engaged to his limit. They try another with like same result and so on, until they have either to take a novice and risk the chance of an entry, or engage one of the known judges and discard the patronage of the club. With regard to a few of our members who are quite qualified to come out as judges of any of them, I will extend the hand of friendship, and if societies give them the honour of selecting them of their own free will, so much the better; but on the other hand to restrict judges to the two shows, by the time the Scottish National and the Crystal Palace (two of our largest shows) came on, there would be nothing but perfect novices to place the awards. I wrote our secretary re the above, stating my views and telling him that this rule was very unpopular, and wished him to call a special meeting of the club or try some other means to hear every member's views. He replied that he does not think that over a dozen members would attend which may be true. However, I trust members will not be backward in expressing their views through your go-ahead paper, CAGE BIRDS.

J. PATTERSON.

Chirnside.

PROPOSED NEW SOCIETY FOR POPLAR.

SIR,—Seeing in your valuable paper, CAGE BIRDS, a couple of weeks back, letters about starting a Cage Bird Society for Poplar, I may say I should very much like to see one myself. If those who have written and others residing in or near, and who are willing to join, would send their names to me, we could come to some arrangements for calling a meeting. T. G. HUNT.

31, Cotton Street, Poplar, E.

THE BENJAMIN SPIERS FUND.

SIR,—Kindly print following list of subscribers to the Benjamin Spiers' Fund in your next issue. I should also like to thank CAGE BIRDS for the great assistance rendered towards this deserving case. Mr. Hadcocks, through seeing the appeal in CAGE BIRDS, collected 5s. This is my final appeal for 7s., so that I can make the sum up to £10. I thank all subscribers for their donations, and wish them a successful season.

F. EASTERLING.

5, St. Mark's Road, Fulham Road, S.W.

Messrs. Hadcocks, Trower, and Miller, 5s. each; D. Scott, Harris, H. N. and Dawson, 2s. 6d. each; Allnott, Brownlie, Lewis, and Silver, 2s. each; Mrs. Love, Mrs. Carson, Messrs. Maybank, Buswell, Woner, King, Scaife, Stevenson, Wright, Baker, Mason Birch, Lawrence, Churchard, Hodges, Thorpe, Curry, and Jordan, 1s. each; Hawes, Rogers, Bassett, and Roberts, 6d. each; total, £2 13s.

THE YORKSHIRE CANARY CLUB OF SCOTLAND.

SIR,—A well-attended meeting to form the above club was held in the Co-operative Hall, Glasgow, on Wednesday, February 19, R. Eastman, Esq., in the chair. Amongst those present were Messrs. W. Fortune, vice-president, Y.C.C. of Ireland; G. McPhail, S.P.C., and R. B. Gibb, G. and W. of Scotland. It was unanimously agreed to call the Club the "Y.C.C. of Scotland," and that the Club be formed in the interest of the Yorkshire Canary in Scotland. Mr. Eastman was elected its first President, and the interest the genial President of the Glasgow and West takes in the Yorkie entitles him above any other Fancier in Scotland to that position. Two vice-presidents were elected, Messrs. R. B. Gibb and J. Lowe; also hon. secretary and treasurer (combined) Mr. F. Bowman, 5, Parkview Gardens, Tollcross, Glasgow. It was decided to form a committee of eleven, five to form a quorum, these being Messrs. D. Cooper, T. Penman, C. Martin, R. Mitchell, and G. McRobbie (Glasgow), W. Fortune (Edinburgh), W. H. McDougall (Fort William), J. B. Paterson (Ayr), J. Campbell (Lassodie), A. M. Baird (Paisley), and W. Shewan (Fraserburgh). Messrs. Gibb and Penman were elected auditors and scrutineers. It was decided to hold a first feather show, the President kindly offering a medal. Mr. Fortune also promised a special. A letter was read from Mr. Baird, hon. sec., Paisley O.A., expressing his regret at not being able to be present, and offering a special for first feather show, donor not competing. After a very successful and pleasant meeting, votes of thanks were passed to Mr. Eastman for his kindness in acting as chairman, and to Mr. Fortune, who came through from Edinburgh to attend the meeting. It speaks well for the future of the Club when we have such an enthusiastic number of members to start with. Any young Fancier intending taking up this variety can do so with every confidence, as with one or two exceptions the whole of the members are novices. I shall be pleased to send any information to Fanciers wishing to become members, or who send on 2s. 6d. annual subscription; they will then be in time for the specials at our first feather show.

F. BOWMAN, Hon. Sec.

BEGINNERS: YOU MUST read the ANNUAL.

ROLLER CANARIES AT THE PALACE SHOW.

SIR,—My reply to Mr. Whittaker's letter in your last week's number is this—On the 7th inst. I was informed of your challenge by our secretary, and replied to it as follows: "I will not establish a precedent by accepting a money challenge from an exhibitor, nor would I think of staking my reputation on the chances of a Roller's vagaries." Now, after the appearance of your letter in the Press, I am anxious that others should have an opportunity of hearing the bird, and without myself gambling on what a Roller may sing or not sing at any future time I have handed a sum sufficient for expenses to our secretary, to be used for the sole purpose of bringing about a public hearing of the bird. It will be interesting and instructive. Before doing this, I wish to state that I have shown my judging notes to every person who asked for them.

A. RETTICH.

SIR,—In reply to the extraordinary letter of Mr. Whittaker in your issue of last week, I have been advised by my solicitor to take no notice of it for the present.

CHAS. ROEHL.

SIR,—It is a great pity that Mr. Whittaker was in such a great hurry to rush into print. £20 challenges are not as a rule accepted by return of post. I received his post-card containing the challenge on Saturday, and wrote as requested to Mr. Rettich, who would receive the letter on Monday morning. Assuming this allowed him to write by return of post, I should then get his letter when I arrived home on Monday night. And allowing that I sat down and wrote off to Mr. Whittaker, he (Mr. W.) would not receive the letter before Tuesday afternoon, and I presume that Mr. Whittaker wrote his letters to the Press on Monday, as he was in time for that week's issue. As it happens, the reply came on Tuesday night, and is as follows:—"I will not establish a precedent by accepting a money challenge from an exhibitor, nor would I think of staking my reputation on the chances of a Roller's vagaries." This I consider a very proper answer for the judge to make, and I am sure that if Mr. Whittaker will think the matter over again he will agree with it, as I do not think that, having himself judged several times during this past show season, he would care to have challenges in the Press from exhibitors who are dissatisfied with his judging. As I am always on the look-out for any ways and means of getting funds for the Club, if Mr. Whittaker really means business, I shall be pleased to arrange matches for him. We have a good many sporting members, and I have no doubt they would cover the money for the benefit of the Club's funds.

Hon. Sec., B.R.C.C. J. W. NORRIS.

A STANDARD SHOW CAGE FOR BRITISH HARDBILLS.

SIR,—I see in this week's CAGE BIRDS that the National British Bird and Mule Club have under consideration the adoption of a standard pattern cage for exhibiting British seed-eaters in. Though not a member of this club, I hope the members will forgive me for making a few suggestions. Now, I think the idea of having a partly wired top cage is one of the worst things that could be brought about. Firstly, every Fancier knows that the open-top cage has a great tendency to make Goldfinches, Linnets, etc., wild, and also to make them tumblers, which is a great drawback to an exhibition bird. Secondly, everyone who sends to a show knows that cages are very often—more often than not—stacked one on top of the other, and the cage with the wire top is bound to catch all the water and other waste from the cage above, to say nothing about the dust which settles on a cage. Why, only this year I sent my birds to a show where there was nothing staged in the room except cage birds, and when they came back the tops of the cages were thick with dust, which would no doubt have settled on the bird in a wire-top cage. Some might say—What about the Yorkshire show-cages? Well, I know this—you will see Norwich staged cleaner than Yorkshires as a rule, and if you happen to send a Yorkshire to a mixed show, where there is generally a dust, he will want washing before you can show him again. Thirdly, a great number of Fanciers make their own show-cages, and the bow-top pattern wired front is most difficult for a novice bird-cage builder to make. The price also would be more with the wire top than with a plain box pattern, and this is a great item to the working man Fancier. I think the British Bird and Mule Club should select a cage after the style of the Norwich Plainhead Canary Club's show-cage, with the drinking-hole in the middle and no food receptacle (Fanciers to put plenty of seed in bottom of cage), with one uniform kind of perch, and colour, say, of a nice shade of green, enamelled black outside and wires enamelled the same colour as the inside. Or there is a very handy cage made, I believe, in Scotland, with sliding front and perches screwed through back of cage. This sliding front is very useful for cleansing purposes. However, whichever cage the club selects, I hope the British bird Fanciers in general will adopt same, and let us have a uniform cage, both as regards colour and perches, and not, as now, some red outside, some black, and, as I have seen, some green. I think the National British Bird and Mule Club have taken a step in the right direction, but let us have a cage that would be used throughout the country, and one which shall be cheap and economical. I should like to hear what other British bird Fanciers have got to say on the matter, as I think this is a matter that should be considered by them.

BRITISH BIRD FANCIER.

THE FIRST PRIZE ALBINO AT THE PALACE SHOW.

SIR,—I note in the CAGE BIRDS a letter respecting how my bird was caught and reared and what it resembled with its call note. Well, I myself got the bird when it was only very young, and also the parent birds and the rest of the young. They were got only about half mile away from my house. I took a great interest in the young bird and put it under the care of a hen Canary, which fed and reared it splendidly. As to its call note, I cannot tell you what it is like, but first thing in the morning it has a most lovely, low, sweet melody. But during the day-time you scarce hear it chirp. I must also tell you that its parents were Yellowhammers. I am at liberty to show where the bird was caught and can produce witnesses to verify my words. I hope this brief allusion will explain matters.

RALPH KELL.

MORPETH WAKES FROM SLUMBER.

SIR,—Kindly allow me space to reply to Mr. Dippie's letter in last week's issue of CAGE BIRDS re the Morpeth Society. I was at the final meeting of the old society, and Mr. Dippie gave those present to understand that he notified all the members except one. I was also at the first meeting of the new society, and there learned that there were two other members, Messrs. Marshall and Grey, who were not notified. I think this is sufficient to justify my supporting Mr. Grey's remarks about the final meeting of the old society not being in order. Perhaps Mr. Dippie will explain why he did not notify those two members?

S. P. LACKEY.

SIR,—I read with much interest the letters which appeared in last week's CAGE BIRDS in reference to the new Morpeth Canary and Cage Bird Club—the one sent by "One Feather" and the other by Mr. Dippie (secretary of the late Society). As these letters are the outcome of the report I sent of our first meeting, I feel in duty bound to answer them. There is much of "One Feather's" remarks with which I can agree, and I judge from his letter that this fancier knows more about the old society than he cares to give out. "One Feather" cannot reside very far from Morpeth, I guess, and if he was not a member of the old society, I am sure he will find a welcome in the new one. He charges some of the members of the old club with roosting; so I judge he is not a rooster himself. Now, we do not want roosters in our club, so, Come along, "One Feather," and join us. Send word to our secretary, Mr. Cowling, Fulbeck Cottage, Morpeth, and let us have your co-operation and help. Now, in reply to Mr. Dippie's remarks. In the first place, the heading, "Morpeth Wakes from Slumber," is not of my phrasing. I had hoped that the past was done with, but I cannot stand by and be charged with inaccuracy, and I assure your readers that my report of our first meeting was both true and correct. Now that Mr. Dippie has thrown down the gauntlet, I must explain that the old society, of which I was a member, was carried on with two meeting nights, namely, a Friday night meeting for town members, and a Saturday night meeting for district members. The final meeting of the old club was held on a Saturday night, consequently the town members were not notified. Then I learn that at that meeting, after it was proposed and seconded that the club be disbanded, Mr. Cowling suggested that the meeting should be adjourned and the town members summoned to a meeting, to have their views on the matter. His suggestion was not taken up, and consequently the Saturday night, or district members' meeting, broke up the club, as already reported. In conclusion, I would like to mention that our new society is progressing favourably. We have our new president, Alderman G. B. Grey, J.P., to finally elect, also a vice-president in the person of Mr. E. B. Atkinson, of Choppington, and a goodly number of new members.

A. G. MARSHALL.

Order your ANNUAL at once, or you will be too late for one.

THE NIGHTINGALE IN MID-DEVON.

SIR,—I am a constant reader of your valuable paper, CAGE BIRDS, and I would like to know if any of your numerous readers can inform me as to whether or not a Nightingale has been heard to sing in Mid-Devon? I have lived in the Exe Valley, but I never remember hearing a Nightingale. SKYLARK.

A LINNET SINGING CHALLENGE.

SIR,—I have seen challenges in your valuable paper, CAGE BIRDS, lately, on Linnet singing, and seeing the parties can't get on with a match, I am willing to sing any bird in Yorkshire for £5 and upwards, birds to be on the shelf 15 minutes, cleanest and best mouthful. Man and money ready by applying to—J. SCARFE, at R. Dearlove's, 156, Porter Street, Hull.

WHERE DOES THE COLOUR COME FROM?

SIR,—In last week's CAGE BIRDS Mr. Metcalfe says, "Do the clear Yorkshire Fanciers go to the Cinnamon Mark for their colour? I say No." Well, Mr. Metcalfe, where do they go? If they go to the Green Mark Yorkshire for colour, will you kindly explain where the Green Mark Yorkshire comes from? Also where the Heavy Green Mark Norwich comes from? Also, can Mr. Metcalfe explain where most of the Greens in Liverpool (I mean the best) come from, and how they were bred? I will give the novice a very easy way of breeding Norwich Greens—Foul Cinnamon hen, short and thick, good head, plenty of width across shoulders, very short tail, extra quality of feather, and a heavy-marked Green cock, plenty of size, good round head (without horns). A pair of this stamp will breed them all right. I notice type wins, and colour has to take a back seat when type comes along. If one or two of our leading Cinnamon breeders would just match up a few pairs for green breeding, things would hum in the Norwich Greens Liverpool way. JUST PAST THE NOVICE STAGE.

THE RARE REDPOLL-BULLFINCH HYBRID.

SIR,—Thanks very much for giving myself and readers the correct wording of the Mule classes in the Dudley schedule. I give it once more in case Mr. Ward, and whoever else is interested, did not notice its significance. "Class 17, Light Canary Mule or Hybrid, including Canary Bullie." "Class 18, Dark Canary Mule or Hybrid." Now, that is surely plain enough for anyone to interpret. And yet Mr. Robson, a judge whom Mr. Ward names as an expert, gives second prize to a Greenie-Bullie in Class 17. Perhaps he thought it a Canary-Bullie. The veriest tyro can see by the wording of the two classes that the Greenie-Bullie should have been entered in Class 18; and any judge but an expert would have wrong-classed it under the other heading. How it escaped the notice of the reporters and the committee is beyond me. What have the other exhibitors in Class 17 to say about it? Perhaps Mr. Ward will give us his opinion.

T. JOHNSON.

CAGE BIRDS report read: "1 and 2 Laurence, Canary-Bullfinch and Greenfinch Bullfinch," which should have been: "1, Laurence, his well-known Canary-Bullie; 2, Leigh, his equally noted Greenie-Bullie."

SIR,—It is not my intention to harrow my own (or anyone else's) feelings over the rarity or otherwise of certain Hybrids; oh, no! I had enough of that sort of thing years since over that controversy relative to the Canary-Bullie. But seeing what is being written just now, it occurs to me that instead of a solution of the difficulty we shall be drifting—ah! drifting as we often do. Now, Mr. Ward's first letter was innocent enough, I thought. I certainly saw nothing in it to call for some of what followed. A Mr. Jackson followed with what was not exactly correct, and was "pulled up" the following week, or pretty quickly; even his little error made no difference whatever, and things stood as before. As far as we are at present, I don't think it is really a question of rarity at all where Hybrids are concerned; for if so Goldie-Bullies could hardly ever get home first, however good they may be. Certainly we hear a good deal about rarity, but it has generally taken a seat away backward. I have not had the good fortune to see the very champion Goldie-Bullie which appears to trouble some, yet I know just as well what he is like as if I had been the lucky breeder of it myself, for the bird was minutely described to me by more than one immediately it was exhibited and came in for its—I believe—first and only second. I knew all about Mr. Jackson's getting it—how he got it, and how he didn't keep it. In fact, Sir, I have not had a bad "cough" since I read Mr. J.'s letter! But drifting again—that's another story. Rarity—ah! well, 'tis like this: a judge has to find the best bird in the class before him. Now, what is "Cist"? Why is a Goldie-Bullie better than a Redpoll-Twite? Is it better? Well, even a poor specimen of the former is certainly a larger and better-coloured bird than the latter; therefore it wins. All Hybrids are rare to a certain extent, and the rarity depends a good deal, in my opinion, on the number of those who try for certain crosses. Some succeed with one cross, some with another; some don't succeed in getting any for several years, then they feel how rare they are, all of them—as I did after trying for five or six years before I even got a full egg. Yet I have never once failed to breed Hybrids every season since. Rarity depends on the number of tryers for certain crosses more than anything else. This is my view of it now, as it was when the Canary-Bullie was so strongly objected to as a possible. I said, if as many tried to breed them as did for the Goldie-Bullie and other crosses, we should see more of them, and this has come true. Now, there may be good and moderate specimens of various crosses. I will not go into the Foreign element, whether such should compete with our true British crosses or not, but at present they do in many cases, or at any rate partly Foreign, and we cannot well prevent it. Then the judge, if he places the largest, best colour, and condition on top, cannot be blamed, and should not be grumbled at. "We want a class for each cross to do them full justice." As long as various crosses get facing each other, some very rare, though small-sized, cross is liable to get behind a bigger one of a more plentiful variety. The Goldie-Bullie is, in my opinion, the most beautiful bird we have yet produced in the Hybrid world, and is not likely to be easily put under by any other cross, however scarce. I write of first-class specimens only, of course. R. BROWNING.

SIR,—I have followed with interest the correspondence in connection with the above. In my opinion a good many of the judges appointed nowadays to adjudicate on these classes at ordinary shows have not had sufficient experience (and in some cases none at all) in the breeding of any of these rarer crosses, and very few good judges, with a thorough knowledge, officiate. What is the consequence, if one happens to put down a very rare cross? The same is either left out of the cards altogether, misjudged, or wrong-classed as a hen British bird. For instance, I can mention a show held this year where a certain Hybrid was judged as a different cross to what it really was, and got into the cards. It was certainly a very nice one, and would, in my opinion, have stood just as high if it had been placed according to the cross it represented. But I just give this as an instance of how judges differ. Then again, too much consideration is given to size in preference to rarity, quality, and the correct reproduction of both birds in one. To confirm this, I will give a little of my experience. I exhibited a Redpoll-Siskin (not very rare, I admit). This bird competed against eight others in the class, all of the larger crosses, but did not even get a card. By chance, I was examining this class, when the reporter for the Fancy Press was taking notes of them. On asking his opinion, he remarked that he was a "little champion," and should certainly have been amongst the first three. In conclusion, until experienced breeders of Hybrids act as judges at shows, we shall always find these difficulties arising. Therefore, I say, follow the judges who are capable. W. HORNBY.

SIR,—Referring to Mr. Johnson's letter last week, it appears that he is very much behind the times as regards Hybrid breeding. He admits he has never tried to breed the Hybrid in question, but says there were six Redpoll-Bullies bred last season, but does not tell us how many were reared, and how many proved to be male birds. Seeing that hundreds of Fanciers no doubt throughout the world were trying for this Hybrid last year, the fact of so few being seen on the show bench is proof that it is not a common Hybrid, but very difficult to obtain. He also says he wonders whether there were six of any other variety of Bullfinch Hybrids bred in one season. I might tell him I had seven young from one pair, Linnet and Bullfinch, in 1906, four of which I reared, the first two both in one nest, and the finest of the lot, turning out both hens. The same year I successfully reared five from Goldfinch and Redpoll. I have had about six pairs up for the Redpoll-Bullfinch for some years. Result: plenty of eggs, but only as yet reared one young, the majority being clear, or the germ going wrong during the first week of incubation. As regards St. Helen's Show, I might tell him I had my information not from the judge, but from a St. Helen's gentleman who visited the show. I never bark unless I can bite. I trust the discussion which has been going on for so many weeks may prove beneficial to Hybrid breeders. If "Tynesider" will publish his name, I shall, by your kind permission, Mr. Editor, be pleased to deal with him. A man working under cover of a nom-de-plume in a discussion like this is not worthy of the name of a Fancier.

CHAS. J. WARD.

PROPOSED NEW SOCIETY FOR TONG STREET, DUDLEY HILL AND DIS. (Bradford.)

SIR,—Will all fanciers please attend a meeting at the Holme Lane Hotel, on March 3rd (Tuesday night), at 8 p.m. prompt, to discuss whether it is advisable or not to form a society for the above districts?

(Messrs. Ogden Bros.). F. OGDEN.

ROSY-BREASTED COCKATOO DESTROYING PERCHES.

SIR,—In reply to Mr. Haines, I give the following remedy for Cockatoo destroying perches. Some time ago I sold a publican a good rosy Cockatoo, which was also a very good wood chewer. Now, this man's idea was the best I've seen. He took out the perch, had one made and covered with tin. This stopped his little game at once, and to-day he is as nice a bird as you would wish to see. If the bird still persists in destroying something, fix up an empty cotton-reel. It isn't the perches which make feather-pluckers—it's generally wrong feeding at some time or other. J. BROXUP.

IS IT CRUEL TO USE MEAL-WORMS?

SIR,—In your correspondence column last week Mr. F. C. Barnes tells us that mealworms have neither sex nor feeling. It would evidently have been interesting to some of your numerous readers had he given us a few facts in favour of the assumption. As all are well aware, mealworms are the larvæ of beetles, and, to a certain degree, like other animal life, are of a sensitive nature. Therefore, as a natural consequence, they must feel the painful agony when either pinned or nailed or pinched between a wire spring to the perch for a few hours before death takes place. With regard to sexual difference, does Mr. Barnes maintain that the separation of sex is influenced by external conditions? And does he ignore altogether the fact of an internal law of evolution which determines the constitution of the mealworm like other species when the egg is deposited, whether it shall be male or female? I hope all fellow fanciers will adopt the same method as Mr. Barnes, which he finds is more economical and certainly more humane than the modern implements of torture. LAPSUS CALAMI.

HAWFINCHES AT THE PALACE SHOW.

SIR,—What is the normal type of Hawfinch on the show bench? The criticism of the Hawfinch class, Exhibit No. 1841, seems strange. Officials select judges to do their duty, and have no control over the awards they give. All honour is due to Mr. Hills as an adept in the Fancy, but at the same time I hope he will explain himself and give his idea of the above Hawfinch; or any other visitor at the Palace Show can give me his opinion about it. I don't know what he means; perhaps he knows more about the Hawfinches than I do myself, but it seems as if past reputation goes for nothing nowadays. I saw Mr. Axe's bird at the Scottish National Show, and I examined him fair and square, he then belonging to Mr. Chick. At that time I did not consider him a crack, by any means. His colour was poor, no shape or size to be compared with the winner at the National Show, yet the National winner was left cardless altogether at the Palace Show. He had topped the list of all Hardbill classes at Scottish shows this season, under a few well-known judges, such as Mr. McQuiston, Mr. Clarke, Mr. Pettigrew, and Mr. Stewart. It is strange that Mr. Axe wanted to purchase him at the National Show; I expect he wanted to exhibit him at the Palace Show. It seems to me that without you are in the "know" at the Palace, it is of no use fighting.

ROBERT GILMOUR.

LENDING BIRDS FOR SHOWS.

SIR,—It seems to me this is a practice which is far too common and is doing the Fancy a great deal of harm. The lender and the borrower are equally guilty, but I think the latter is the greater sinner because as a rule he gains more by the transaction. He may have various reasons for adopting such tactics, such as defeating a successful rival, but very often his main object is to dispose of a stock of inferior birds, and this is how he goes about it. He enters a lot of birds for a particular show, but instead of showing his own birds, he exhibits birds, known winners, borrowed from some other fancier, and of course lifts a few tickets. Then he advertises his own birds for sale and refers to them as off the same strain as his winners at such and such a show. There is, however, no more relationship between the winners and the birds advertised for sale than there is between Cock Robin and the Sparrow that killed him with his bow and arrow. But the trick succeeds. The novice is on the outlook for birds off a winning strain and is prepared to pay a good price for a good bird. He sees the advertisement and either calls or writes for what he wants, and is deliberately cajoled into purchasing birds at perhaps double their value in the belief that they are bred from winners. Not so with the experienced breeder. He knows a good bird when he sees it, but the bait is laid for the novice and he takes it. Now nothing will discourage a beginner quicker than to find that he has been duped, a fact he discovers sooner or later. I would, therefore, suggest that the clubs take up the matter in the interest of the Fancy, which depends to some extent at least for its success on the number of recruits it can enlist, and try what they can do to put an end to such questionable methods. They may not be able to stamp out the evil altogether, but they might have a rule and enforce it, whereby any member found guilty of lending his birds for another show should be liable to forfeit his birds, which might be sold for the benefit of the club, the member being expelled. I venture to think that few would run the risk of incurring the penalty. FAIR PLAY.

PROPOSED SOCIETY FOR BISHOP AUCKLAND AND DISTRICT.

SIR,—Will you kindly allow me a small space in your valuable paper, CAGE BIRDS, to make an appeal to all fanciers and lovers of birds in and around the Bishop Auckland District to start a Cage Bird Society? All wishing to do so will please send their names and addresses to me, so that we can arrange a place suitable for a meeting, etc.

FRED MOSES,

11, Maude Terrace, St. Helens, Auckland, Co. Durham.

THE FUTURE OF THE BELGIAN CANARY.

SIR,—I must congratulate you on giving such a capital record of the late Palace Show, and I return the compliment of lifting my hat to you, and also to your artist for giving such a true picture of the Belgian Canary. As I have little time or opportunity for writing, perhaps you will excuse my mentioning a few matters concerning the Belgian Fancy Canary that are causing a lot of discontent, also injury to the variety and shows as well, in the hope that some of your able writers and correspondents may take the matter up and assist in averting the loss of this most interesting domesticated variety of the Canary. I wrote a well-known and respected breeder re entries for the late Palace Show, and give you his reply: "I do not intend showing again so long as the judges favour the Scotch Cross." Now, one can hardly find fault with a decision of this kind when it is common knowledge that a well-known exhibitor has taken first prizes in both Scotch Fancy and Belgian classes with the same bird; and at popular shows! One show I visited this season gave classes for Belgians, and with one exception I took all to be first crosses. But what has a judge to do in a case of this kind? In the case of a mismarked Britisher, or a ticked bird in a clear class, the birds would be disqualified, or passed. Perhaps a judge with backbone enough may undertake to do that at some future show, with our variety, and then we Belgian Fanciers would know where we were. As it is, we are "in the wood" and fairly lost.

JAMES ROBERTSON.

IS IT A DEFUNCT SOCIETY?

SIR,—Being a reader of your weekly journal, CAGE BIRDS, almost from its first issue, I noticed on reading a week ago a paragraph headed "Is it a Defunct Society?" I would like to ask "Presupposition" what he calls a defunct society? It would have been more straightforward an fancier-like had he signed his own name and not a nom-de-plume. It looks too much like the Yorkshire bit about it, and if he had read "Club Notices" in CAGE BIRDS properly he would have known whether there is such a society as the Leeds Cage Bird Society. Perhaps "Presupposition" is half-asleep, or his eyes want rubbing when he reads it. Now I, as secretary, invite "Presupposition" on behalf of the society to our next meeting on March 7th, to a table-show which we propose to hold. He will then see for himself if it is a defunct society. Perhaps he wants something from the society. If so, please apply to the late secretary. He may then get it. Now, I tell "Presupposition" there is as good a lot of Fanciers in the Leeds Cage Bird Society as ever there was, and I, being one of its oldest members, should know a little about them. As regards holding committee meetings, has he anything to do with them? How many societies do publish their committee meeting reports? May I tell "Presupposition" we have got a good syllabus drawn up for the current year, and a balance-sheet for the one that is past, although they are not published. Perhaps our society is not so strong in members as some for the size of the town, some of our members leaving it to join the Yorkshire Union. What is their gain I fail to see up to the present as regards prize winning.

A. WILKINS,

Hon. Secretary

Several Letters unavoidably held over.

Management of Scotch Fancy and Belgian Canaries.

By THOMAS SMITH.

(*Continued from page* 126.)

The male birds require to be fed in order to bring them into breeding condition, and full song. The hens will follow, in my opinion. The end of March is soon enough to put the platforms and nests into the cages. If the birds are in suitable condition the probability is that eggs will be forthcoming by the middle of April, which is soon enough for a right set off.

There is more progress made in having a nest of fertile eggs then, than two unfertile clutches by the same time. Fanciers in their efforts to make haste by rushing on the pair, shipwreck their opportunity by having nest after nest of unfertile eggs until the hen is laid out, and she is spoiled not only for that season, but for the remainder of her life. To have young too early is attended with many risks, and patience, which is a rare virtue, should be exercised. The whole month of February should be devoted to preparation, i.e., to having the birds in the pink of condition, and everything clean and tidy.

To enter a clean bird-room is a real treat. It means work, but no fancier, who embarks upon the hobby of breeding and keeping birds should shrink from the labour involved.

The Washing of Birds.

Hand washing is resorted to with other sections of cage birds, and sometimes with Scotch Fancy and Belgian Canaries. But I think it is wise to leave the hand washing out of use with the Scotch Fancy and Belgian Canaries, and leave them to take a natural bath, which should be early in the day. A bright morning should be chosen to ensure their feathers drying speedily, and being well pruned by the birds themselves. I introduce the bath here because it is associated with spring cleaning. The room, cages, etc. being thoroughly cleansed before the birds are run into spotless cages, the birds should have a bath, adding to the water an infusion of quassia chips to destroy any mites that may be about the birds. Generally speaking, the birds when young have had an opportunity to bathe themselves. And when young a bird will always be found fond of the water, and will plunge into it at once. But should any be shy of entering, they can be sprayed with the same mixture, namely quassia and water.

The birds should be run into a spare cage; a number can be put together, and placed in a part of the room where the sun shines in. This will stir them to dress their feathers and remove the damp. It is foolish to allow birds to wet themselves late in the day, because they have a tendency to settle down with damp feathers, and are apt to get a chill, which should be avoided, as one can never tell what may be the outcome.

It is comparatively easy to pick out birds that are free bathers. They have generally fine plumage, whereas the birds that never have a douche are dry and rough in feather, and never seem so healthy. In mild weather the bath should be taken full advantage of. The spray is useful, but with its use dirt often gathers at the root of the neck, and that tends to the feathers coming out, leaving the neck bare and unsightly.

To run birds, that have just washed themselves, into a soiled cage will make a terrible mess of them. They rub themselves against the perch, wires, and everywhere. Hence it is an absolute necessity that they should be put into a perfectly clean cage. It involves trouble, but it is worth it. A clean, nicely plumaged, Scotch Fancy Canary is a comely object.

Those who have an opportunity of watching wild birds will have noticed how they select a nice, clean spot, of suitable depth, and how they disport themselves in the water. They then betake themselves to a favourable twig and dress themselves. They enjoy it, and are bright and happy. Our confined pets should have every facility for rendering their lives bright, comfortable and happy. We can do a lot to assist them and the bath is one of the best means of adding to their joys.

Breeding cages are far from uniform, and as often as not are either too small or too large. Small cages are to be avoided, because they do not give room for the birds to romp about in, and large cages take up too much space in the room.

The Choice of Cages.

Of the two extremes the large is the more beneficial for the birds. I look upon the medium size as the more suitable all round, as the pair in such a cage will have plenty of room for moving about, and it can easily be accommodated in a fair-sized room.

As to the construction, wire sides, top, and ends are the best, and a capital idea is to have them so constructed that the top part can be detached and lifted off, leaving the bottom and seed-box to be cleaned. It is a really excellent idea, the birds being left on the perch, or in the nest, as the case may be. The top and bottom can be fastened by, say, three wire catches adapted to the galvanised rod to slip into them, and can be made secure by having a movable catch at either end and in the front, to keep the upper part firmly fastened to the under part.

This arrangement enables the cage to be kept perfectly clean, at the minimum risk of disturbing the pair, even while hatching. Wire is preferable to wood for crossbars or posts, giving very little "footing" for red mites. As the summer advances, even with wire only they congregate in the corners. A very good way to get rid of them is to run a lighted taper along their harbours and put an end to their existence.

The detachable under-part is an advantage; it can be washed occasionally, and can be done at night, putting the upper part (with the birds) on the shelf until the morning.

These cages give a minimum of work and a maximum of comfort in the bird-room. Perches should be firmly fixed in the cage, and on no account should a loose or shaky perch be kept in a breeding-cage. It is as important to have proper perches in the breeding-cage as in a show-cage.

The egg pans should be of earthenware, and the cage should be so constructed as to enable the pan to be put into its place without causing the birds to flutter. A small, uplifting door should pull down over the pan, and fit into the groove or niche of the egg pan.

A nice, medium size for a breeding-cage —in my opinion—would be the following dimensions: 22 inches long, 9 inches broad, and 14 inches full depth; bottom at sides all round, 2½ inches. It is an advantage to have a high covering for the seed-box, and it should be made to slip in and out. This facilitates cleaning out every nook.

A compact cage such as I have described will give ample moving space, and will suit the pair and a brood of four or five young, and with very little trouble the birds, cage, and fittings can be kept clean and tidy, which, in a proper aviary, is a matter of great importance. For Scotch Fancy and Belgian Canaries open cages have been found preferable to close box cages. Most fanciers like to have a view all round in the first few days of the existence of the young.

Keeping Records.

A full pedigree record should be kept of each bird. The fancier who thinks he can trust to his memory, even with a limited stock, will one day find himself at sea as to how his stock has been bred. Without a record, it is impossible to avoid or control inbreeding. The further a strain is built up the greater the necessity. The need increases as the stock develops, and one needs to be in a position to trace the history.

"Know thy stock" is a safe maxim.

In March.

The impatient fancier, as the day advances in length, becomes anxious to make a start, and very often puts the nests in and sets the pair off in the early part of March. It may be all right, if the weather should keep even and mild, but past experience teaches that the temperature fluctuates. A few days mildness may be followed by a very cold snap; it may be of frost and snow, or of severe east winds, and these play sad havoc, leading to unfertile eggs, or, where young have been hatched, to deaths.

Early breeding has advantages if other things are equal, but the disadvantages outweigh the advantages. For a successful season's breeding a good deal depends upon a satisfactory start. The parents should be in breeding condition, and are the better for having March to themselves before setting out upon the duties of the year. A fair start in the month of April will avoid wastage and heart-breakings.

(To be continued.)

ILLUSTRATED IDEAS

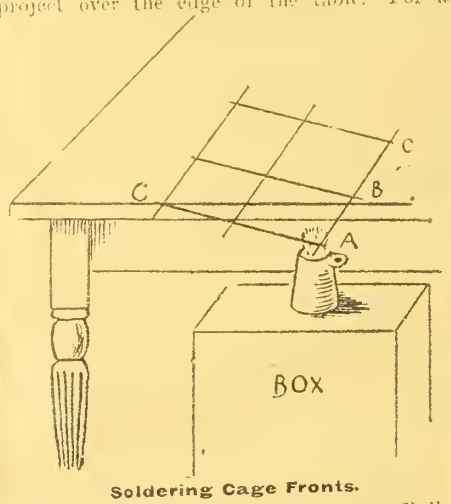
Under this heading we shall illustrate weekly some ideas useful to the bird-keeper. Readers are invited to send us particulars of any novel and practical appliance of use in our hobby, either in cage, bird-room or aviary, with a rough sketch of same where possible. Every "Illustrated Idea" used in this column will entitle the sender thereof to a postal order for two shillings and sixpence.

No. 183.

SOLDERING CAGE FRONTS.

Sent by F. Hayward, 1, Oak Grove, Urmston, near Manchester.

Some time ago I noticed in CAGE BIRDS several ideas for cage front making. I find the following the easiest way for a novice. I lay the bars flat on a table, put the wire A through the holes, and let end of front C—A project over the edge of the table. For a



Soldering Cage Fronts.

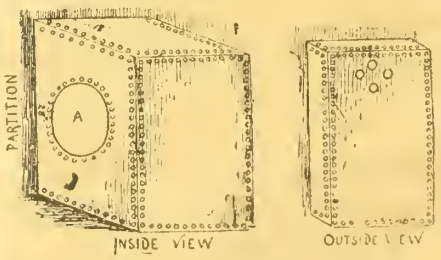
lamp I use a water-pot out of a Roller Canary travelling-cage, which I fill with cotton-wool, then pour a drop of methylated spirit over the wool. With a sharp chip drop a spot of salts of lemon (killed) on point A. Hold lighted lamp underneath and touch with strip of solder. This method is much less trouble than using blow-lamp or soldering iron.—F. HAYWARD.

No. 184.

HEATING A BIRDROOM.

Sent by G. Street, 29, Claremont Road, Highgate, N.

Enclosed is a rough sketch showing a good and practically safe way of heating a small outdoor bird-room. Procure hot water cistern



To Heat an Outdoor Birdroom.

and remove cap (A). Fit the cistern through the partition about two inches, to allow fumes to get away through the holes drilled. A lamp inside tank, upon an upturned flowerpot, keeps the room at a good regular heat, and if a square of glass is placed over (A) no fumes or smoke will penetrate into bird-room. Measurements are of the one I am using.—GEO. STREET.

THE YOUNG NATURALIST.

Prizes of 1s. and two of 6d. each will be given each week for the best three anecdotes about birds written on postcards. Competitors must be children under sixteen years of age, and must state from where stories are taken.

Two stars indicate the Winning Contribution; one star the runners up.

*A Friendly Robin.

One day as I was walking about on the hillside, I saw a little Robin hopping about from one branch to another. Next morning when I awoke and got out of bed I looked out through the window and saw the same little Robin that I had seen the day before. It was in the garden with my Blackbird and Thrush. It continued to come to the cages for a long time and the three birds became great friends. The Blackbird and Thrush used to feed the little Robin through the wires. Unfortunately pretty little Robin redbreast was caught by an old cat.—Sent by William John Gully, age 11 years, No. 21, Graig-street, Pontygwaith, Glam., South Wales.

*The Cobbler's Starling.

A cobbler in Paris was very poor, and did not know how to make both ends meet, but one day a boy gave him a Starling. He taught it to say several words, and at last put its cage outside his shop window. Soon the passers-by heard a voice cry, "Come in, come in—Jacque is an honest man; good fits made here. Cheap, cheap, cheap." And people came in when they found it was a Starling that spoke, that they might talk to it, and it thus brought customers. The cobbler, who did mend very well, soon became known, and did a paying trade.—Taken from "Animal Stories." Sent by Leslie Ford (age 11), "Blantyre," Perrymount-road, Hayward's Heath, Sussex.

*Jackdaw Reared by Thrush.

One day as I was going for a walk round the Church, I found an egg which had dropped from a nest. I took it home and asked my father what sort it was? He said he did not know, but told me to put it in a Thrush's nest in the garden. I did so, and it was hatched two days before the young Thrushes were. All went well for a week, and then it threw the young Thrushes out of the nest. The old birds fed it until it was able to fly. I caught it and put it in a cage and fed it on pieces of meat and bread crumbs, until it could feed itself. My father then said it was a young Jackdaw. We used to let it fly about in the garden and play with two small kittens. We had it four months, after which a dog killed it. We were all very sorry to lose our pet.—Sent by Alice Sutton, age 12, 2, Pleasant Cottages, High-street, Great Wakering, Essex.

The Novices' Notebook.

This page will consist of topical hints, addressed chiefly to beginners, concerning every branch of the hobby of bird-keeping, and the notes will be contributed from time to time by various leading experts.

(*Continued from page* 192.)

The Nesting Sites.

In this primitive room I have described, the nests, as mentioned, were composed of small wicker baskets, which at that time were the only kind to be seen in that part of the country. They were smaller than the modern nest pans, and deeper. One might take a newly-made Hedge Accentor's nest as being very similar in size and shape to these baskets, which were provided with two small loops on the rim. By these they could be easily fixed in almost any position in a cage by simply putting it on the wire in the desired position inside and pressing it against them so that the loops projected through the wires, and then threading a thin wicker or twig through the loops on the outside. In the room I spoke of, however, these baskets were placed in the bushes in any position where the twigs and branchlets allowed of their resting securely in the manner of a wild bird's nest, and were then secured firmly in any convenient way, such as tying with string to some point. I believe these baskets are still sold, but although they are airy and neat, they have some serious faults, so that I would hardly advise any new beginners starting with them.

Position of Nests.

In these bird-room aviaries, if one may so call them, the position of the nests, height from floor, and similar matters are often puzzling to beginners judging by queries we have heard asked from time to time. Now the Canary is eminently an adaptable creature in these respects, and it matters little whether the nests are high or low, exposed or secluded, or what not; when it desires to go to nest it will do so as readily upon the floor if a snug little corner is there, as it would do in a nest near the ceiling. Therefore in an indoor room where the birds are flying loose, one may make these arrangements to suit their own convenience. In the room described, the bushes nailed against the wall were placed at about the height of a man's hips, so that the thick, bushiest part was about on a level with the shoulder, and the baskets for nesting in were consequently at just about the right height for a man to peep into the nests without any difficulty. Some nests were a trifle lower, but none were lower than, even if there were any quite as low as the hips, and none higher than the head, so that it was the simplest thing in the world to walk quietly round the room and peep into every nest.

In one or two cases the bush consisted of holly, and the dead leaves still clinging to the twigs made quite a nice private sanctum, and it was necessary to brush aside the leaves before the nests could be seen—so like real wild birds' nests they seemed that, now looking backwards, I should feel inclined to utilise evergreen branches exclusively if it were possible. In other cases where the ordinary nest-boxes were used there would be no objection to hanging them a little above the level of the head in some instances, because these being hung loosely upon nails, can be so easily unhung to see what the nests contain, that a sitting bird need never be scared off during the process.

Another point concerning these boxes, which is also applicable to the modern type of nest-pan with a fairly substantial rim round the edge, is that the birds can alight on the edge of them and get a perfectly secure foothold in order to perform various duties about the nest, so that no kind of perch or platform is required to be attached to them, as a recent querist wanted to know. This is one of the drawbacks to that old-fashioned basket nest, which had no rim worth speaking of, and the birds had but a poor foothold on these nests. The importance of this apparently trivial detail is readily understood when it is remembered that copulation is almost invariably performed on the side of the nest, so that if the birds have an insecure footing there the danger of infertile eggs is enormously increased. But in the manner in which they were used in the room described above, this objection was quite overcome by the rims of the nest baskets being surrounded by the spreading twigs of the branches, which gave plenty of grip both for the feet and wings.

The Position Out-doors.

In out-door aviaries, however, the conditions are different, and it is always best to place the nests fairly high up near the roof. Cold winds and driving rains have to be avoided as far as foresight can do so, as well as the probable interference of birds that are not breeding themselves, and which are less apt to interfere with the nests of others if they are placed well up out of the way than they would if they were more prominently under their very eyes, so to speak. Here, however, ordinary nesting receptacles are rarely the best—that is, the ordinary boxes or pans which are used for breeding Canaries and Mules in cages. Something which gives more privacy is wanted, and a variety of receptacles in various positions is always advisable, and a number well in excess of the actual number that can be in use at the same time is one of the best preventive measures against squabbling over nesting sites. The common, wooden barred German travelling cage, with the roosts and water-pot taken out, and three or four of the short bars at the end where the seed box is placed removed, and, finally, the seed box broken out, makes one of the very best nesting sites for Canaries and a great number of the smaller foreign birds in out-door aviaries when thus prepared and hung up securely near the roof.

Other Nesting Sites.

The ordinary travelling cages used for Canaries by our English dealers are also most useful for this purpose. About half-a-dozen wires removed from one end, and a hole bored in the back to hang it on to a nail is all the preparation they need. In short, almost any small cage or box will make a serviceable site for a nest with a very little trouble indeed. What is usually known as a cigar-box nest is most easily described and will serve as an idea of what is wanted. To make one of these, all that is required is a cigar-box—one of the deep boxes—which has held a hundred cigars, as those made to hold fifty are too narrow when converted into nest-boxes to be of any use. Cut off a third part of the lid, and nail the other part down permanently, bore a hole in the bottom opposite the piece cut off the lid to hang it by, and you have your nesting site. Of course, any box something near the same size may be converted in the same manner, or boxes of a similar pattern may be made. In most cases they will be found to be more favoured than the orthodox husks by nearly all the small breeding foreign birds, except, perhaps, those of the Parrot tribe, which prefer something with a smaller opening and not quite so easy of access.

As regards the necessity for having a perch or platform before the entrance to the nests, as we were asked about recently, I should in all save quite exceptional cases, dispense with any such convenience, which in the vast majority of cases is just as likely to afford a vantage ground for pitched battles by the obstreperous members of the community as anything else, to the no small risk of damage to the contents of the boxes in question, whether it be eggs, young, or sitting hens.

A Case in Point.

Having thus dealt rather fully with nesting sites, which with a little management might be adapted to practically all sorts of conditions both in in-door and in out-door aviaries where the birds fly loose, I may revert again to aviaries and mention a case in point which may readily be applied to general needs. It turns upon a query from a certain "S.W. Aviary" for information respecting the conversion of a lean-to wooden shed in a corner of a yard. The exact measurements are of no importance to the general reader as it may be taken as a fair guide in all these cases that the number of birds kept should not for any great length of time exceed half the number of square feet of floor space. To commence breeding, a quarter of that number should be quite sufficient. Thus in a space, say six feet by six feet, one cock and three hens should be sufficient to start breeding, and the place should be considered as stocked to its full capacity when it has from twenty to twenty-five birds, or if no breeding was carried on about eighteen head of stock would be sufficient as a permanent population.

To describe the shed in question; it was a lean-to structure having a brick wall for the back and another brick wall higher than the highest part of the shed at the right-hand side. The door was at the front end of the left-hand side, and a ventilator was placed in this side at the highest part where the roof leaned to the house wall. In the front part of the shed was a large window which occupied nearly two-thirds of the depth, and nearly as much of the length of the frontage altogether. Immediately underneath this window was another ventilator, and under the corner of the window next the door was a sink or drain. The roof was of half-inch wood, but the nature of the existing floor was not mentioned. This was the rough material which one desired to convert into an aviary in which to breed birds flying at liberty. If we assume that the structure faced south-west, south-east, or some point between these two other than due south, or even if it faced due south, and had something to shield it from the sun for two or three hours at mid-day, we have an excellent beginning for a model aviary of this kind. And comparatively little trouble will be required to make the necessary alterations. To begin with the floor: if it consists of bare earth it is in the best possible condition to be dealt with. Just level the surface, get a few old glass bottles or waste pieces of glass, break them up into small fragments, and strew the ground all over with them, beat them flat with the back of a shovel, and then lay down a bed of concrete to a depth of an inch or thereabouts on top of the broken glass, and when this is dry you have a floor that neither mice nor rats will ever penetrate. Almost any builder will sell the concrete ready to spread about, by the barrow-load, or less.

Then in this particular case, whilst I had the concrete handy, I should consider carefully whether it was possible to construct a kind of tiny pond with concrete, on the left side of the window, about on a level with the window-sill, and provided with an outlet connected with the sink previously mentioned as being in that corner. This outlet might easily be made with a small piece of gas-pipe. In any case it should be a small tube of some kind, so that where it fits into the bottom of the concrete structure it is small enough to be stopped with a cork or wooden plug, which can be removed at will to allow the water to run off. With a little ingenuity anyone could make the necessary connection with a piece of elder twig from which all the pith had been removed. The object of this miniature pond is, of course, to form a bath. The necessity for opening the door may prevent its being made very large, but, after all, there is no real necessity for anything of huge dimensions. About nine or ten inches wide, and from twelve to eighteen inches long, will serve every useful purpose. The depth should be about one inch, and the sides should be shaped at an angle whilst the concrete is soft so as to make a gentle incline into the deepest part, the same as you see in an ordinary tea saucer. Care must be taken to make the outlet in the deepest part of the bath, or trouble will be met with in emptying and cleaning it. If properly made, nothing is necessary beyond simply drawing out the plug to empty it. Then it should be made a common practice to draw out the plug when the birds are attended to in the evening. Next morning, when feeding them, about breakfast time, finish up by washing out the bath and rinsing it, then put in the plug and fill it with water to stand until the plug is again removed in the evening.

A Badly Placed Ventilator.

The inlet for fresh air was placed, as stated, immediately beneath the window, and was practically situated about a third part of the distance from the ground to the eaves of the roof, so that the fresh air might easily rush in on to numerous points where the birds were sitting at ease or flying about. This is what must be carefully avoided at all times. Too much fresh, pure air cannot easily be obtained, except when it comes in a stream on to a resting bird; then a very little of it will prove too much. This ventilator, therefore, I should remove and place lower down against the floor. The egress for foul air is not badly placed, though if one were handy with tools it would be a decided improvement to add a small outlet at the highest point of the roof on the right-hand side, in the angle formed by the two walls. But this would require good workmanship in order to prevent the possibility of rain finding its way through.

(*To be continued.*)

NOW IS THE SEASON. BUY THE STOCK BOOK.

The Latest Publication for the benefit of keepers of cage birds. Is framed on novel lines and contains many entirely new departures. Is absolutely indispensable to everyone interested in the hobby.

COMPILED BY G. E. WESTON.

MAKES BIRD BREEDING EASY.

This "BREEDING ROOM REGISTER & BIRD KEEPER'S ACCOUNT BOOK" (copyright) offers in a handy form a means of keeping—

- The complete pedigree and description of every bird in one's room.
- A full record of the season's breeding experiences.
- An account of every young bird reared, and how it was disposed of.
- A register of one's doings at the shows (the most complete and useful yet devised).
- A cash account for the year.
- A profit and loss account of the season's proceedings, and a balance sheet showing how much one has invested in the hobby.

A series of Registers will thus furnish a concise record of the career of a fancier as a breeder and an exhibitor from year to year, or over any number of years.

Many useful Emergency and other Hints will also be found in its pages.

Result of Season's Competitions.

The following are the results of the season's competitions:—NORWICH GREENS CHAMPION CUP SECTION: Pym 103, Walker 93, Davies 37, Hales 19, Hawkes 17, Hadwin 12, Doughty 10, Mrs. Sunderland 9, W. Jenkins 7. NORWICH GREENS CHAMPION CASH SPECIALS: Ryno 199, Walker 176, Davies 70, Hawkes 43, Hales 31, Hadwin 32, Mrs. Sunderland 18, W. Jenkins 10, Doughty 15, Thompson 2, and Stewart 1. NORWICH GREENS NOVICE CUP SECTION: Deacon 134, Harrison 89, Moss 60, R. Jenkins 16, Cawley 9, Isaac 9, Barker and Abbott 12, divided, Nelson 4, Andrews 1, Murray 1. NORWICH GREENS NOVICE CASH SPECIALS: Deacon 349, Harrison 145, Moss 132, R. Jenkins 23, Isaac 19, Cawley 12, Barker and Abbott 20, divided, Nelson 3, Andrews 3, Kilner 2, Murray 2, J. Pillings 2. YORKSHIRE GREENS CHAMPION CUP SECTION: Clayton 124, Rowlands 55, Benson 38, Helliwell 42, Gill and Picking 30, divided, Hughes 27, Handley 23, Fieldon 22, Doughty 22, Martin 13, Metcalf 12, Hardwin 5, Thomas 5, Walker 5, Dixon 6, Stewart 3, Jennings 4, Thompson 3, Mrs. Sunderland 2, Wardale 1. YORKSHIRE GREENS CHAMPION CASH SPECIALS: Clayton 211, Benson 86, Rowlands 84, Hellewell 69, Handley 46, Gill and Pickup 46, divided, Doughty 42, Hughes 40, Fieldon 40, Metcalf 23, Martin 22, Hadwin 16, Thomas 16, Walker 12, Dixon 11, Jennings 10, Thompson 8, Mrs. Sunderland 5, Wardale 2, Parker 2, Stewart 1. YORKSHIRE GREENS NOVICE CUP SECTION: Deacon 68, Carswell 62, Vernon 36, Tempest 29, Drinkwater 25, Wright 6, Moss 4, Carlile 2, Vales 2, Wilson 1, J. Pilling 1, Creber 1. YORKSHIRE GREENS NOVICE CASH SPECIALS: Deacon 148, Carswell 115, Vernon 75, Tempest 51, Vales 6, Creber 5, Wilson 1, T. Pilling 3, Richmond 1. YORKSHIRE and NORWICH GREEN NOVICE SECTION: Silver spoon won by Mr. F. H. Deacon. Will members please check these figures, and notify the secretary in case of mistake? The annual dinner and presentation of prizes will take place on March 3, when it is hoped all prize-winners will attend and bring their friends. Tickets, 2s. 6d. each. The tickets may be had from any member of the committee of either the G.C.A. or the Liverpool Bird Breeders' Association.—S. HADWIN, Secretary, 28, Pembroke Place, Liverpool.

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. It kills all insects, harmless to ever thing else.

The Foreign Birds in my Conservatory.

By GEO. O. WOOD.

My hobby for the last few years has been bird-keeping, mostly that of Foreigners, but also a few Canaries. I have had invaluable help from reading CAGE BIRDS, although experience is the best schoolmaster, and I have great pleasure in supplying any information I may have gained. My little feathered friends cost me almost more than I can afford, yet for sentimental reasons I neither sell nor exhibit them.

A Lean-to Conservatory.

To begin with their place of abode; this is a lean-to conservatory facing south, is about 15 feet square and is very lofty. My first care was to get this made thoroughly water-tight, and after many stormy interviews with the painters, I got it accomplished to my satisfaction, and had the glass roof painted white outside. Next, I had every crevice and crack filled with putty to insure against draughts, also a width of fine wire netting placed all round the floor at a depth of 6 inches to keep out rodents. I then chose a variety of nesting places, amongst them being cocoanut husks, shells, Hartz travelling cages, ordinary wooden boxes, old hollow logs, and several hanging nests out of Canary breeding cages. These I fixed up high and low against the inside walls.

I next had a fairly large movable shelf fixed up for the food and also a lower shelf near by to hold the bathing vessels, and so avoid the food tray getting wet by the spray when bathing. I then had a wire netting door fixed outside the glass door leading into the garden, so that the inner glass door could be opened. In summer I have this open all day; in winter it is closed, and the French windows, which open into the conservatory from the sitting room, are left wide open. The warmth which enters from this room, where there is always a fire, is generally enough to keep the conservatory sufficiently warm, but should there be an unusually cold snap, I light a circular oil heating stove, which burns for 36 hours without attention, and incredible though it may seem neither smokes nor smells. This valuable article I was fortunate enough to pick up in an auction room for half-a-crown.

There is a vine in the conservatory, which I allow to grow wild in order to provide perches and shelter for my birds, and I only keep such plants there as are harmless and are likely to become infested with green-fly. At the same time I may say I have never seen one there at all.

About the Inmates.

In this conservatory I keep from 40 to 50 foreign birds flying loose. All these birds I have bought from dealers advertising in CAGE BIRDS. Experience alone will teach the novice which birds to buy. I am guided by the brightness of the eye, the general sprightliness of the bird, and the business-like interest which he takes in his food; I avoid the bird which eats in a careless, not-because-I-like-it-but-I-know-it's-good-for-me manner. Following these hints, I have frequently bought birds which were deplorable looking objects, and in a month's time have been rewarded by seeing them in perfect plumage. Such results are very gratifying to the genuine bird-lover.

I have a quarantine cage, in which I keep newcomers for a few days, until I am quite satisfied that they are safe company for the older residents. Here also I break them in very gradually to the more varied diet, grit and green food, which they have been deprived of since leaving their native lands. I am not in favour of tonics or physics of any kind for foreigners, but in the case of a weakly bird quiet, warmth, and a "wee drappie" of the "crater," diluted according to the size and condition of the bird, will work wonders.

Whilst speaking of food, I cannot too strongly urge bird keepers to buy nothing but the best; there is no greater mistake than to give birds second quality food. I believe in varying the food as much as possible, and I supply my little friends with white and brown millet, also spray millet, small Indian millet, Canary seed and Paddy rice. Three or four times a week I give a small saucer-full of Cecto, and daily I give a liberal bunch of flowering grass, which is most highly appreciated by all my birds. I also give small portions of chickweed, groundsel, shepherds purse, and plantain. Indeed, a third part of my garden is left waste ground, so that I can always have a supply of these necessaries for the birds. Occasionally I give a little egg food, if I have any left after supplying the Canaries.

Their seed and drinking water are given in long, narrow, glass dishes. These, I believe, were intended for flowers for table decoration, but I have appropriated them for the birds, as they have the double advantage of permitting several birds to eat or drink at once without quarrels ensuing; also, being so narrow, they are not easily fouled. I place these glass dishes on the moveable shelf before mentioned, which is first covered with sand and grit (as many varieties as I can get), also cuttlefish and ground egg-shells.

The bathing water I place on the lower shelf, in several shallow, round or oval jam dishes. Mine are of glass, and I would mention here the importance of always using the same kind of vessels, for though some birds are so bold and inquisitive, they will examine anything new, others again are so timid that they will refrain from bathing, or even from eating or drinking, if a different vessel is used. Water should be changed at least twice a day, and oftener in hot weather. Scrupulous cleanliness is of first and vital importance in successfully keeping birds. I am careful not to spill any water in the conservatory as that produces a sour, unpleasant smell. Now and again I carry in a bucketful of soil from garden, and empty it on the floor; this I spread out a little day by day, and it is much enjoyed by my little folk, who find something much to their liking there. Sometimes I throw on the floor hay, moss and grass, which are quickly carried off to the various nesting places.

I should give a hint here to the effect that it is wise to see that such material is loose enough to be easily pulled asunder. I lost one beautiful bird through its pulling apart some tight nesting stuff, and thereby dislocating its neck. Having given particulars as to how I manage my little flock, I will just mention the kinds that I keep, and their characteristics as they appear to me.

Some Beautiful Birds.

The most beautiful, I think, are the Pintail Nonpariels. I have never had any difficulty in keeping these; they quickly settle down and are most desirable birds to have. Very gorgeous too are the Madagascar Weavers, but I must confess I only keep these for their beautiful plumage, for I find them rather wild and unsociable with the smaller fry. Java Sparrows and tri-coloured Nuns are quiet and sociable members, and their note is rather musical. Green, red and brown Avadavats share the conservatory, and are charming and graceful little birds, and an ornament to any aviary. They are most affectionate and united little creatures, and the clear ringing song of the last mentioned two is most agreeable. Combassoos have a peculiar and rather pleasing song, and their black opalescent plumage is very handsome. But they might well take a lesson from the gentle Avadavats as to how to live peaceably and amicably together. My white and black-headed Nuns are rather serious little folk, and are chiefly remarkable for their devotion to each other.

Senegal Finches and St. Helena Waxbills are sprightly, active little birds, and make a pleasing variety. The Cordon Bleus I consider the most delicate of all my birds. After many losses I now possess three really fine specimens; they are very graceful and have a pleasant, twittering little song. Orange-cheek Waxbills are certainly my first favourites, such bright and active little birds are they, and very tame and confident. I have four which will come at my call and eat from my hands. They have built several nests which were marvels of perfection, but as yet they have never laid any eggs. My Zebra Finches are my second favourites. They are brave little fellows, and soon get tame and confident. The hens seem to suffer greatly from egg binding, but this generally yields to treatment. I am afraid mine are rather a depraved selection, for though they are indefatigable in building and laying, they have never yet reared me one chick. Paradise Whydahs are quiet birds and very interesting.

My Budgerigars and Cardinals I keep in cages as they are too destructive to have their freedom. The former I have tamed entirely with flowering grass which they will eat from my mouth or fingers. The Cardinals are not so tame, but their mellow song is very attractive. I give mine a piece of dry sponge cake very often, and they are wonderfully fond of it.

I think I have now mentioned every kind that I possess at present. It is a long time now since I first liberated my birds from cages, but it would be difficult to say whether the birds or I experienced the more pleasure. The interest in keeping them is certainly trebled when one can see them in a state of partial freedom. The birds themselves are happier, healthier, and more beautiful, and one feels an immense satisfaction in making these little captives, who are brought away in thousands from their own sunny lands, comfortable. I have several easy chairs and a table in the conservatory, all covered with holland. Needless to say my happiest hours are spent amongst my feathered friends, and there are few visitors who go away without first asking "May I see your birds?"

UNDER THE WHITE ROSE.

BRADFORD East and East Bowling Societies were running members' shows last Saturday, the first-named with Mr. W. A. Cowgill for judge, and the latter Mr. W. H. Shackleton. Both Societies are running competitions for the season, and generally have very good shows. Bradford West were favoured by a lecture on "British Birds and Mule Breeding," by Mr. H. J. Chittenden, who delivered a racy and interesting paper, in which he dealt with the Goldfinch, Linnet, Bullfinch, and the kind of hen Canary he prefers for muling, also giving valuable information on the wild seeds for conditioning. It was greatly appreciated by the fanciers present, and a hearty vote of thanks was proposed by Mr. J. Greaves, seconded by Mr. D. Sunderland, supported by Mr. J. E. Brotherton, and carried unanimously by the company assembled.

QUEENSBURY were in for a "feed" at the Co-op., and as I have had one or two "bucks in" at the same place, I can vouch for it that the birdie men fared well. After the inner man had been attended to, the intellectual part of the programme came on, Mr. R. Halliday, of Shipley, giving a lecture on "Pairing and Rearing," and no doubt the members and friends would be able to gather a fund of information, as "Dick" knows a thing or two on the subject, which he gives in a lucid and easily understandable style.

THE proposed alterations, amendments, and additions to the rules of the Yorkshire Union are causing a lot of discussion at the present. Perhaps a survey of them will be opportune and interesting, may be even of assistance to fanciers generally. Rule 3 to read, "That all officers be elected by the delegates" (instead of being elected by the annual ballot). This is simply going back to the old methods, which were the cause of so much trouble and annoyance, and it was one of the first things to be vetoed by the A.Y.O.S. on its formation.

NEXT, "That the annual ballot be abolished," and "that an annual general meeting take its place." The annual general meeting was initiated by the A.Y.O.S., and as all the Societies were in Bradford and District it proved all that was required. However, upon the re-union taking place, it was not to be considered as just treatment to the members of those Societies whose attendance necessitated a railway journey and other expense. Therefore, for the special benefit of these the ballot was adopted, but the miserable response (about 25 per cent.) is not considered worth the great expense and work that the system entails. The Bradford Societies were very little better, but, of course, they were never much in favour of it, to them the annual general meeting being far the better way.

RULE 11 deals with the fact "that no judge shall judge above one of the Union Winter Shows." Therefore a Society requiring an assistant judge cannot engage one of those who are to officiate at any Union Show. It is proposed as one alteration that: "Any Society requiring an assistant judge may make its own selection. No person is eligible who is one of the appointed Union Judges *until he has judged the show to which he is appointed.*" No. 2 amendment for the same rule reads: "Any Society requiring an assistant judge shall make a selection from the list of persons voted upon by the members of the Union, who have not received an appointment." The first-named is considered hardly fair by many, as it gives the judges of the first few shows a preference over those that judge later in the season, and is simply evading the idea of only allowing one show to each judge during a season. The main difficulty in the second amendment is that, for the later shows more particularly, the judges' names who are left may not be qualified to officiate upon some of the classes provided, such as British, Mules, Hybrids, or perhaps even the Norwich. The point here is for the members to consider which is the lesser of the two evils.

RULE 12 deals with the selection of the Judges, and here a very good amendment is brought forward, which gives every society two chances of picking out the judges the members fancy, and this should be voted for by all fanciers. Rule 20 to read: "That it be open to anyone, during the time the show is open, to lodge a protest, etc.," instead of, as at present, that the time for lodging a protest expires at 5 o'clock on last day of show. The main point against the present rule is that at one day shows many exhibitors are not able to attend much before that time, and, should anything be wrong, the aggrieved exhibitor can only stand by and grin and bear it. Therefore, the new idea should appeal strongly to the Fancy.

THE next alterations, etc., all bear upon the Novice Section, and are many in number, medals being the predominant feature. Under the present regime a certain number of medals are given for the season (of course this will vary according to the financial state of the Union), and are won by the points gained at all the Union shows during the season. The principal feature of this system is that the Union officials know exactly where they are to land in matters of finance, whereas many of the new (? old-fashioned) ideas may very quickly land them in the bankruptcy court. No. 1 amendment reads: "That any novice gaining four First Prizes in one season in Yorkshire Novice Classes at Union Shows shall be considered a winner of one of the gold medals, and that two gold medals be given in Norwich Novice Section for 1st and 2nd most points throughout the season." No. 2 amendment reads similarly to above, with three first prizes and the addition of, "Price to be decided by the Council of the Union."

FROM a financial point of view both are absurdities, placing the Union in the undesirable position of not being able to estimate the probable liabilities for the year. Had the latter of the two amendments been in force during the past season it would have either spelt ruin financially to the Union, or an enormous levy on each Society, or such a reduction in the value of the novice medal that it would not be worth the wearing when won. To have supplied, on the proposed three firsts system, Novice Medals of same value as will be given this year for points, the Union would have had to "get their hands down" to the extent of £37 17s., which would have left them with a deficit on the year's working of anywhere between £10 and £20.

IN the first amendment no reason can be assigned as to why the Norwich are to be treated differently to the Yorkshire, and it is hardly fair to a "coming" variety to try and retard its progress. Surely the classes have filled well enough (for a first season) to entitle them to fair consideration. The four firsts system has the same disadvantages, in a slightly modified degree, as the three firsts system, and should be studied carefully. Another suggestion is, "That the Novice medals be divided according to number of entries in each Section, Yorkshires and Norwich." But this would make very little difference, as the proportions have been very similar by the way in which they are given this season.

MANY fanciers have been disappointed at the non-running of the Cinderella Show this past season, but nobody can blame the officials, as, after 18 shows, really nothing but failure could have fallen to their lot. However, next season it is proposed to make great efforts for this show, and a meeting to put things ship-shape will probably be held at the first of the young bird shows, to take place in June, when two of the principal items towards success, the date and the formation of a guarantee fund with which to run the show, will be discussed. May success attend the effort.

ON Saturday, March 7th, at 7.15 p.m., at the Manningham C.B.A. headquarters ("Mowbray Arms," Lily-street), a lecture will be given by Mr. Askew, entitled "Glimpses of Nature with the Camera." About 150 slides will be shown and explained. The pictures consist of British birds, their habits and methods of pairing, nesting, and rearing their young. I am informed that the photos. have been "snapped" around Bradford, and that they comprise some species which our British Bird fanciers would not credit dwelt among us. The Society extends a hearty invitation to all fanciers and friends to be present, and particularly those who are interested in this branch of the Fancy. Admission free.

"STRAIGHT UN."

The Song Thrush: How to Cage & Keep Him.

By G. G.

In all the long list of British wild birds the Song Thrush, or Mavis is one of the most charming. "The bird with speckled breast" has almost every characteristic to recommend him for the attachment of mankind, and to favour his being kept as a household pet.

There is, perhaps, one drawback which is to be found in his size, food and habits, and the consequently large cage required in which to keep him in cleanliness and comfort. This also militates against his presence in many households, as room is a very great item, the want of which is sometimes painfully apparent in respect to the human dwellers therein. Unlike the Linnet, the Goldfinch, or the Chaffinch, the Song Thrush cannot be kept in anything like comfort and condition in a narrowly circumscribed space. To attempt to do so would but be to court failure. The bird, to be kept successfully, must have plenty of cage room, light and air. The alternatives are freedom and death. A Song Thrush kept in a small cage soon becomes a picture of misery. If given plenty of light and air, ample room, proper food, and abundance of grit and water, he will keep sleek, vivacious, and be a delightful companion and pet.

A Magnificent Bird.

Few who know anything of the wild birds that dwell amongst the fields and copses of these islands, would fail to recognise the Song Thrush. His magnificently rich brown and black feathers, shimmering in their glossiness like dew drops, and tinted almost akin to the golden leaves of the autumn foliage, relieved in turn by his wondrously speckled breast, are features of the Song Thrush's dress unapproached by any other British song bird.

I love the Song Thrush as much almost for his beauty of plumage as for his song, and I must confess that of all the multitude of beautiful wild birds I have had and do yearly have before me, none delight me more from an outward point of view, while none appeal to me more by their song than the Mavis. Oh! those wild, glad notes! They must be heard when the Mavis is wild and free to be heard to the full. In early morn or at dewy eve they are the same, wild, glad, full of melody and of vivacity and hope. And much of this experience may be got from the bird in captivity, if the proper conditions of keeping are present, although the song will not be quite so fierce, or the notes so wild from behind cage bars as from one of the top-most branches of a tall tree by the village homestead, in the spring or early summer time, when his mate is incubating her eggs, or sheltering her young beneath her wings.

The Proper Food.

I have alluded above to the food of the Song Thrush. It may seem singular to lay so much stress on this point, but it is absolutely necessary in order to achieve success in keeping the bird in captivity. Many kinds of soft food mixtures are sold suitable for the general keep of the Song Thrush. It is not for me to advertise the wares of any specialists. The advertisement columns of this journal may always be scanned. But I am going to recommend a food which can be procured from the corn merchants and mixed at home. A full grown Thrush may be fed on a crumbly mixture of hard boiled egg and barley meal (the egg will provide sufficient moisture) to which may be added a little crushed hemp seed. You must always be careful that the egg is fresh, and the food must never be allowed to stand and get sour. Now and again, as a treat, you may procure a few ants' eggs; soak them, and add to the meal, etc. A splendid treat for the Song Thrush, in the way of food, will be found in a few meal worms or a fat slug or garden snail now and again. These the Thrush loves, and they are of great advantage to him. Another tit-bit is a little raw beef scraped fine. If you give the bird a snail in its shell and watch him, you will be surprised at the clever way in which he will extract the dainty morsel from its hiding place. He will pick up the shell in his beak, and hammer it time after time on the floor of his cage until the shell is cracked, and out he fetches the tit-bit. Worms are relished by the Song Thrush, and there are many berries he also enjoys. He prefers them ripe, and he is a demon on ripe cherries and such-like fruits.

Of the song of the Thrush, it only needs to be heard to be appreciated. Its soft, flute-like notes are a joy to the listener. Some consider its song less continuous than that of many other wild songsters, but for all that it is full of the most beautiful tones.

On Suitable Caging.

I should like to say a word upon a suitable cage in which to keep a Song Thrush, and upon the temperature in which a caged specimen is housed. I have as much objection to the round basket cages as I have to the bell-shaped cage for Canaries. They are an abomination. I favour a cage wired only at the front, save and except a portion of the top, which can be covered by letting down a wooden flap or putting it up at will. Cages that are open all round are very objectionable, as the bird is often hung out of doors, and being kept in one position cannot escape the cutting winds and draughts that may be present at various times. The bird is compelled to endure it, being a captive. If free he would fly to shelter. Neither should the bird be subjected to sudden changes of temperature, or taken out of the open into a hot room at night. Again, a Song Thrush kept in an open cage, is apt to get wild and untractable. A box about 3 ft. long, 18 inches high, and the same distance from front to back, nicely painted a French grey tint inside, and black out, with paint for the inside mixed minus white lead and with plenty of hardening and drying substance in it. There should be a sliding bottom drawer which can be removed, cleansed, and re-sanded at will. The cage must be cleaned out frequently, and the water and food vessels (which should be get-at-able from the outside) thoroughly washed out and disinfected.

The Song of the Mavis.

For bathing purposes, if you have it, soft water is best for the Song Thrush, but this is not always obtainable. The bird is very hardy and is easily kept if the conditions above referred to are observed. Of course there will sometimes be anxiety and there may even be loss at moulting time, but generally speaking, the Song Thrush is easily kept. And I am quite sure that his song will amply repay you for the care bestowed upon him. Only once, in my recollection, have I heard the song of the Mavis derided, and that was by an old maid who would persist in sitting up late at night and sleeping long after sunrise. In close proximity to her window, on a neighbour's wall, hung a Mavis; and he did sing! At the first glimpse of dawn, there came pouring forth his lovely music. None derided him save the old maid, and she came very near to petitioning the authorities for his removal, on the terms laid down for crowing Cockerels. But I think she fell in love in her old age, and Mavis sings still in his pretty prison house, delighting city toilers who live around and love nature's musicians.

A SPECIAL OFFER

To Users of Fluid Beef and Meat Extracts.

We invite the readers of "Cage Birds" to test for themselves the advantages of the new preparation for making Beef Tea, Gravies, Soups, etc., called Fluid Ju-Vis. Fluid Ju-Vis is Beef strengthened and vastly improved in flavour by the addition of Vegetable Extract. Fluid Ju-Vis is solely a Beef and Vegetable product and contains no adulterant whatever. In Fluid Ju-Vis you get about double the usual quantity for the same money and we are satisfied that you will decide that it is at least equal in quality and flavour to any Extract you have used. Send to your grocer for a 6½d. bottle to-day.

FREE SAMPLE.

If any difficulty in obtaining Fluid Ju-Vis, write us for a Free Sample. A Post Card will do. Sufficient will be sent (absolutely free) to enable you to prove its exceptional quality for yourself. G. Foster Clark and Co. (Dept 27), Maidstone.

All communications for this column should be written on one side of the paper only, duly authenticated with the name and address of the writer, not necessarily for publication, and sent to H. Norman, Editor, "Wild Bird Life," "The Eyrie," Salisbury road, Carshalton, Surrey, by Monday in each week. Original observations and records invited.

A Note on the Redwing.

If the eye is allowed to wander over the meadow land, or the short, thick, turf upon the hillsides, at almost anytime in the day, one will see small moving objects dotted here and there; their peculiar movements are sufficient to tell us that we are watching the feeding Thrushes. But if we take the glasses to more closely examine them, we shall soon find that among them are scattered several Redwings. While examining them side by side one cannot but notice the superiority of colouring of the Redwing over the Thrush, for the former is a most beautiful bird. Look at one in profile: he has the alert look of the Thrush, with a very pronounced pale yellow eyestripe, and when the fluffy feathers of the body partly cover the wings, he exposes a big splash of bright ruddy feathering. He is beautifully striped down the breast, and is altogether a handsome bird. And yet as a caged bird he is not nearly so popular as the Song Thrush; in fact, one can run through a whole season round the shows without seeing a single specimen. For one thing, the Song Thrush is a much commoner species. The Redwing, too, does not possess the grand musical abilities of the former bird. While spending the winter with us, the bird from the north is mostly seen upon the bare hillside, or out in the open fields. Neither the hedgerow nor the garden appears to attract; he is somewhat shy and wary, and prefers to keep well out of range. Or possibly, it is his mode of feeding in his native wilds, where the country is open and exposed. A wild creature cannot change his manner of living nor disregard the inborn instinct of watchfulness and suspicion, which he must naturally feel, when sojourning for a time in a more populated district. After watching birds from other countries, it is interesting to turn to one's books and see what well-known naturalists (who have had the opportunity of studying them in their native haunts) say about them. Mr. Seebohm says they are found as far north as latitude 68 degrees. "The Redwing frequents the birch region, and the upper zone of the pine region, occurring in unlimited numbers south of the Arctic circle in many places, where these trees are found, in south Norway and Sweden, and on the Russian shores of the Baltic. It is the most northerly in its range of any of the Thrushes, and occasionally wanders as far as Greenland." In wooded districts they appear to build in low bushes and shrubs, in much the same manner as our own Thrushes, but in the more open country they will nest upon a sloping bank or between stones. They build a plastered nest lined with fine grasses; the exterior is made of twigs, grass, and reindeer-moss; the eggs number from four to six, and somewhat resemble small specimens of some clutches of Blackbird's eggs. We searched the hedgerows and railway embankments recently for privet berries for our caged birds, but found they had all disappeared. We suspect the Fieldfares have had them, for large numbers of these birds are staying with us this winter. As the light fades in the afternoon, we can daily see flocks of them flying westward. They vary in size from some dozen to fifty birds. There is a continuous stream of them, every few minutes, until it is almost dark, so that some hundreds must pass by nightly. They evidently go eastward to feed and westward to roost. But why do this? Why cannot they roost where they feed? Wherever they feed it must be open country, and one would think they would be as safe there as upon the downs near Banstead.

NOTES AND QUERIES.

Concerning the Snipe.

Small Finches, Thrushes and Buntings are not the only birds that suffer from the severe weather. Many of the waders and marsh birds have a trying time of it. But as the majority of them are strong on the wing and of a roving disposition, they move from place to place, as the weather compels. But even these birds have a rough time of it during a long spell, and snipe, for instance, will sometimes fall to the gun in wretched condition. After the frost has disappeared they will in a few days get quite plump and fat. The worms come to the surface again, and the Snipe feeds ravenously upon them, with the result that they are soon in prime condition.

A Bird Haunt Near London.

As the spring advances Londoners will be wanting a run into the suburbs, somewhere easily reached, and where they can listen to the music of the wild birds. For this purpose there is no spot to equal Wanstead Park. Here one may, in season, listen to almost every species which we get in the south of England. One can hear the Nightingale, Blackcap, Whitethroat, Chiffchaff, and Willow Wren, and all the commoner birds. There is also a colony of Herons and Rooks. Many half wild Water Fowl can be seen upon the water and overgrown banks of the islands. The writer has enjoyed many quiet hours in the more secluded parts, watching the gorgeous Kingfisher and the shyer birds disporting themselves in the summer time. It is easily reached either by tram to Leytonstone from Aldgate, or by train from Liverpool Street.

Falconry in Miniature.

The other day we had a fine opportunity of watching the hunting methods of the Sparrow Hawk. The bird came drifting with the wind over the village, to the open fields, where we stood; he did not notice us as we were sheltered by the hedge. As he passed some half dozen Skylarks took wing; selecting an outside bird, he hurled himself at it, but just missed his quarry which made a sudden twist at the nick of time. Again, and yet again, he repeated the performance but after the third attempt the Lark scuttled away among some cabbages, while the Hawk sailed majestically with the wind, as though nothing had happened. Although we were delighted to see the sport we were not sorry that the Lark escaped. Sparrows are numerous, and possibly the bold Hawk had Sparrow for breakfast instead of Lark; any way we hope so.

Thrush Winters Indoors.

For the last two months I have had a little wild Thrush in my house, writes Mr. E. R. Mill of Paignton, to a daily contemporary. It has become so tame that it perches on the table during dinner and waits until it sees the cover of the butter dish removed, whereupon it calmly walks over, pecks at the butter, and then looks around the table for crumbs. As the bird has lost one of its claws, I caught it and bathed the injury a few mornings ago. The bird showed no signs of fear. On occasion it flies out of the window, but always comes back at meal times and to roost at night.

Pugnacious Sparrows.

A well-known writer says the Sparrows around the Tower of London are the worst specimens of their class in London. Occasionally a Robin will settle in the grounds during the autumn and make himself at home, feeding upon the crumbs thrown out to him, but after a few days a band of Sparrows chase and either kill him or drive him away. These same little villains are always quarrelling with the Pigeons and Starlings, and would no doubt serve them the same if they were able to do so. Foreign birds occasionally escape from some of the ships close by and take refuge in the gardens, but immediately the Sparrows commence a systematic hunt, and drive the poor wretch from place to place, eventually finishing him in some corner where he has taken refuge.

ALWAYS USE OUR

DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor for the *bona-fides* of either buyers or sellers. In all transactions the adoption of our Deposit System should be insisted upon.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient, plus the extra postage incurred, has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller, stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from *both* parties that the transaction has been completed. If a sale has been effected, we baud the amount deposited to the seller. If a sale has *not* been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or, if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the seuder after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must bo properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor. We do not undertake to settle disputes affectiug questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

PREPAID ADVERTISEMENTS

UNDISPLAYED.—Three Words a Penny up to eighteen words, MINIMUM Fourpence. One Halfpenny per Word for each word over eighteen.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and, after the first eighteen words, are charged at two words a penny, but no single advertisement, even if accompanied by others, will be charged at less than the minimum price, viz., Fourpence.

Headlines or Footlines 6d., 9d., 1/-, 1/6 according to size.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL.

The Proprietor reserves the right to refuse any advertisement, or to cancel any advertisement ordered for a series, at any time, without assigning any reason for so doing.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL.

The Proprietor reserves the right to refuse any advertisement, or to cancel any advertisement ordered for a series, at any time, without assigning any reason for so doing.

Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, London. Terms for Display Advertisements on application.

white, blocked to shape, fit any nest pan, on receipt of 1/- postal order, I will send 1 dozen post free.—Address, Errington's, Red Feed Stores, Bradford.

IMPROVED PUNCH BAR FRONTS.

A combination of strength and neatness, best on the market; 12 by 12, 3d.; 14 by 12, 3½d.; 16 by 12, 4d.; 18 by 12, 4½d.; 20 by 12, 5d.; 24 by 12, 6d.; any size made to order, 3d. per foot.—Hodgson Bros., Liverpool-rd., St. Helen's.

PINE BOARDS, PINE CAGES, AVIARIES, ETC.

three-eighth inch by 11 inch, planed pine, best quality, 2d. foot, second 1½d.. 9 inch best 1½d. foot, second 1¼d.; any lengths cut; best pine cages and aviaries to order; estimate free; approval cash, or deposit; trade supplied.—Ridge, Manufacturer, 194, Robertson-st., Battersea, London.

JOHN MACE.

Double breeding cages, 3/10 and 4/10; nest pans with wire brackets, 2/6 dozen; egg mills and seed mills, 1/6 each. Pay me a visit and you will find everything in the bird room appliances that you require.—John Mace, Bird Specialist, Doucaster-rd., Barnsley.

CHEAPEST CAGES IN THE COUNTRY,

15 in. long, 1/-; 36 by 15 by 9, double breeders, 3/6; 36 by 15 by 11, 4/6; all loose wire fronts; painted inside and out with antiseptic paint; warranted death to all vermin; other sizes equally as cheap.—Tom Moss, Papplewick-rd., Hucknall, Notts.

IMPROVED PUNCH BAR FRONTS.

Sizes stocked:—12 by 10 or 12, 3d. each; 14 by 12, 3½d.; 16 by 12, 4d.; 18 by 12, 4½d.; 20 by 12, 5d.; 24 by 14, 6d.; other sizes to order equally cheap. Show cages, Baths, Seed Boxes, etc. Satisfaction guaranteed.—Bunuer and Sons, Cage Makers, Copperas Hill, Liverpool.

JOHN GARLAND.

I have had hundreds to see the punch bar fronts, and when they see how they are soldered, and the way they fit the cage, they simply walk away laughing. Those that are in want of a breeding cage write to an old-established firm; don't be led astray by these 3/6 mushroom firms, as they know nothing about a breeding cage; particulars stamp.—60, High-st., Bordesley, Birmingham.

JOHN A. REECE,

Established 32 years, awarded 28 medals and diplomas. The "Perfect" breeders, single and double, fully fitted, including four cross bar front, top nest-pan. doors, removable wood and wire slide sand trays, etc., beautifully finished. German breeding cages, all metal, latest and best designs, wire fronts; one quality, the best. Illustrated catalogue, postage penny. Will exchange Canaries for goods from list.—Jockey Wire Works, Colston-yard, Bristol.

IMPROVED PUNCH BAR FRONTS.

Sizes stocked:—12 by 12, 3d.; 14 by 12, 3½d.; 16 by 12, 4d.; 20 by 12, 5d.; 24 by 12, 6d., other sizes equally cheap; metal enamelled seed boxes, 4 in., 2½d., 6 in., 4d.; wood, 4 in., 2d., 6 in., 3½d.; bright punch bar and cage wire, etc., show cages, baths, nest pans, egg drawers, nest eggs, bird sprays, cages of every description made to order; all goods guaranteed to be as represented or money returned; lists free.—T. A. Fox, St. Helens.

THE "PERFECT" NEST PAN.

Made of best white earthenware, with wide rim, so that birds easily perch, complete, with strong wire bracket, 2/3 dozen; sample 5d. post free; best swansdown linings, 1/- dozen, post paid; moss and salad racks 3d. each, 2/6 dozen; send stamp for complete catalogue.—Wrigglesworth and Sons, Stonegate Wireworks, York.

PUNCH BAR

Cage fronts made by practical workmen, 12 by 12, 3d., 2/6 dozen; 14 by 12, 3½d., 3/- dozen; 16 by 12, 4d., 3/4 dozen; 18 by 12, 4½d., 3/9 dozen; 20 by 12, 5d., 4/2 dozen; 24 by 14, 6d., 5/- dozen; any sizes made, 3d. per foot, to order; punch bars, 8d. dozen, 3/9 half gross, 7/- gross.—Ashmore, 167, Heath-st., Birmingham.

THE "DURABLE" WIRE FRONTS.

Has it ever struck you that the cage fronts are the most conspicuous articles in the bird room. If so, you will understand why fanciers who take a pride in appliances, always purchase the "Durable" fronts. Nothing on the market to approach them for neatness, quality and strength. Prices:—12 in., 6d., 15 in. 7½d., 18 in. 9d., 21 in. 10½d., 24 in. 1/-, all 12 in. high. Fronts with four crossbars, 14 in. high, 15 in. 9d., 18 in. 10½d., 21 in. 1/-, any size quoted for.—J. Walmsley, 6, Brand-st., Nottingham.

570 CHALLENGE BREEDING CAGES

were sold by me last season, and not one deposit was returned; for proof, write to Editor of CAGE BIRDS. They are made from selected planed pine boards, black enamelled outside, blue inside, sliding partitions, sand trays, nest boxes, seed hoppers, and loose wire fronts; 18 inches, 2/-; 20 inches, 2/6; double, 33 inches, 4/-; 36 inches, 4/6; any size cage to order. Remember, these are made from pine boards, not soap boxes.—Henry Morris, Cape Hill, Birmingham.

FOR JOINER-MADE CAGES CHEAP.

Breeding cages, single, 18 inches long, 15 inches high, 1/9; 26 inches by 15 inches by 11 inches, 2/10; double, 36 inches by 15½ inches by 11 inches, 4/-; 3-compartment, 40 inches, by 15½ inches, by 11 inches, 5/6; any size made equally cheap; remember made by experienced joiners only, these cages have given satisfaction in the past, and are much improved this season; list of 51 sizes free.—Pass, Cage Maker, 48, Annesley-rd., Hucknall, Notts.

3s. 6d. DOUBLE BREEDERS. 3s. 6d.

36in. long, 18in. high, blue inside and black out. Nest boxes, sand trays, sliding division, forming flight cage; only selected pine used, ⅝ thick, and every cage has loose punch bar fronts, not clumsy wooden ones; and bear in mind you are not buying fruit boxes nor soap boxes, but the best-made and cheapest cage in Birmingham. Read this:—"Feb. 24, 1908.—Sir,—Please send me two more double-breeders like the last two.—Yours, A. Dawson, 6, Lovatt Street, Stoke-on-Trent." Give me a trial.—G. White, 122, Great Hampton Row, Birmingham.

CAGE FRONTS.

improved, made with best quality mild steel punched bars, 12 by 12, 4d. each, 3/6 dozen; 14 by 12, 5d., 4/- dozen; 16 by 12, 6d., 5/- dozen; 18 by 12, 7d., 6/- dozen; 20 by 12, 8d., 7/- dozen; 22 by 12, 9d., 8/- dozen; 22 by 14, 9d., 8/- dozen; 24 by 12, 10d., 9/- dozen; any size of front made to order; undoubtedly and acknowledged the best on the market; hundreds of testimonials; best quality punched bars, 40 in., ½-in. or ⅝, 1/- dozen; best straight cage wire, 4d. lb., 7 lb. 1/10, 3/6 stone; best quality seed metal boxes, loose glass fronts, 2 in., 2/3 dozen; 3 in., 2/6; 4 in., 3/-; best white earthenware nest pans, with brackets, 2/3 dozen; linings to fit, 10d. dozen; bird sprays, 4d.; post paid; Canary nest egg, eggs 5d. dozen; post paid.—Fraser, Bird Specialist, 161, Cross-lane, Salford.

ARE YOU LOOKING

For Breeding Cages, Flight Cages, Drawing-room Cages, Singing Cages or any other Kind of Cage?

Also the very best "Charpie," imported direct from Germany, prevents sweating and does not harbour parasites as Hair does, being at once cooling instead of heating (beware of cheap substitutes and common cotton). Fresh clean Moss for Nesting—any quantity supplied.

Birdlime—strongest and best in the world—the original XXX, 4d. per box free. List of Sparrow and other Traps, Nets, &c., free for the asking.

Are you wanting Egg and Bread Crushing Mills, Nest Pans, Nest Eggs or any one thing connected with the Birdroom or Aviary? If so before deciding, send for my

BREEDING CAGES.

Best and most convenient cage on the market. Being a breeder myself, I know what is required. Beware of cages 8 in. wide; they are useless. Note my sizes and compare with others. Two compartments, 35 in. by 15 in. by 11 in., 3/6; three compartments, 53 in. by 15 in. by 11 in., 5/-; four compartments, two top and two bottom, 7/-; four compartments, 70 in. by 15 in. by 11 in., 7/-; six compartments, 10/-; eight compartments, 12/6; all the above are fitted loose fronts, sliding partitions, nest boxes, seed hoppers, etc., and are 11 in. wide. Customers own designs executed. Large bundles moss and hair for nesting, 6d., 9d., 1/-, post free.—Kendrick, Carpenter, 14 Cook-st., Coventry.

BREEDING CAGES,

made by practical workmen out of best selected pine boards, plained inside and out; not left rough inside to breed red-mite, but made as smooth as the outside. All made on my own premises, not sent out to be thrown together so as two men can get a profit; fitted with sand trays, nest boxes, seed hoppers, sliding partitions, etc.; 18 in. 2/-, 20 in. 2/6, 24 in 3/-; double, 30 in. 3/6, 33 in. 4/-. 36 in. 4/6. All kind of cages made for the trade. I have got some fine cock Goldfinches in song, 4/- each; and one house-moulted cock Goldfinch, bred Mules last year, 8/6; one hand-reared cock Bullfinch, comes out of his cage and feeds out of anyone's hand, 7/6; Norwich cocks, in full song, 6/6, 7/6, 8/6 each; hens, 2/6, 3/-; all on seven days' approval.—Ashmore, 167, Heath-st., Birmingham.

MEDICINES.

SOLUTION of coal tar; an efficient remedy for asthma and colds in cage birds, 6d and 1/- per bottle, post free.—T. C. Crawhall, Dispensing Chemist, 121, St. George's-terrace, Newcastle-on-Tyne. Telephone 2915, Jesmond.

COUGHS, COLDS.—A safer and more effectual remedy for birds not yet introduced. Avoid "quack" medicines, for they contain ingredients not beneficial to the general condition of your birds. Not a "cure-all," but specially manufactured to treat the complaints here mentioned, 7d. and 1/1, post free.—Gardner, High-lane, near Stockport.

MORGAN'S WHEEZING SYRUP

for cold, asthma, wheezing, etc., in all cage birds, post free 7d. per bottle.—George Morgan and Son, 11, Fortescue Road, Merton, S.W.

ESSENCE OF COAL TAR.

for colds and wheezing in cage birds. To obtain the genuine Essence, send 4d. in stamps for sample bottle, sent post free.—Address, Errington's, XL Red Feed Stores, Bradford.

PANNASSINA.

Prevents and cures asthma, wheezing, loss of song, etc., takes the birds easily through their moult, and is an excellent winter stimulant. This speciality has built up a lasting reputation entirely on its own merits, invariably effecting a cure after every other remedy has failed. In tins, 7d. and 1/2, free. No bird room complete without it.—W. J. Hammond, 19, Anstey-rd., Coldharbour-lane, Camberwell, London, S.E.

AVISINE AND "LITTLE LIVER SEEDS"

The only Safe and Sure Remedies for Wheezing, Loss of Voice, Bronchitis, Soft Moult, Soft Condition, Egg Binding, so called Sweating of Hens, Liver Disease and all kindred Diseases of Birds. Note.—Laburnam House, Dentons' Green, St. Helens, 11 Feb. 08.—Gents. I have tried your Avisine and also got some of my bird friends to try it for their birds, and in all cases they report **instant relief and certainly a marked preventive** against wheezing during the cold, foggy, damp and also frosty weather. I can say its effects deserve much recognition and attention from fanciers and bird keepers generally. I hear its qualities much talked about in Birdie Circles. Yours faithfully, Chas. Houlton. **Prices post free** with special directions and free advice. **7½d, 1/1, 2/7, 5/2½**

YOU are undoubtedly aware that the best birds are by far the cheapest, if a few pence more than the common half-dead rubbish. I have still the finest collection of cock Linnets in England. Every bird on hard seed, singing their pure wild song. Over 1,500 birds to select from. Read one of many unsolicited testimonials received this week:—"Portview Road, Bristol. 28/2/08.—Linnet arrived safe, and it started singing about an hour after arrival. Thanking you for very prompt attention, H. Huntley, to Miss Storey." I offer you genuine red-breasted cock Linnets, 1/-, 1/3, 1/6 each. Extra large birds for show or muling, been in single cages since November last, 2/-, 2/6, 3/- each. All birds on seven days' approval. Neat travelling cages, 8d. each.—Miss E. L. Storey, Bird Specialist, Crowle, Doncaster.

WONDERFUL SINGING MIXTURE,

with instructions how to make birds sing, 9 stamps; correct Linnet notes, how to teach them, 9 stamps.—Russell, 86, Acre-rd., Kingston, Surrey.

LINNET FANCIERS.

When and how to feed and train Linnets, for good fierce singing, 1/-, and stamped envelope for reply. Receipt given with the above for keeping birds in good, sound health.—W. Well, c/o J. F. Williams, 14, Church Bank, Bradford.

in grand condition; cock Goldfinches, 2/6, 3/-, 3/6, 4/- each; hens, 1/-; cock Bullfinch, 2/-, 2/6 each; hens, 1/6, 2/-; cock Linnet, 1/- each, three 2/6; special selected for singing, muling, or showing, 1/6, 2/- each.—Matt. Hopkins, Bird Specialist, 38 and 41, Fylde-st., Preston, Lancashire.

HYBRID BREEDERS.

BRITISH BIRD EXHIBITORS

I have hundreds to pick from, being the largest dealer in British birds in the World, I can pick you out likely birds for moulting winners; beautiful cock Goldfinches, fit to win at once, 3/-, 4/-, 5/-; cock Bullfinches, ditto, 2/6, 3/-, 4/-; cock Linnets, beautifully marked and pencilled, 1/-, 1/6, 2/-; Greenfinches, 1/- and 1/6; large hen Bullfinches, 2/6; cock Bramblefinches, 1/-, 1/6, 2/-; cock Chaffinches, 1/- and 1/6; cock Larks, 1/- and 1/6; big muling hen Canaries, Sibbred, Norwich or Yorkshire type, 4/-, 5/-, 6/-, 7/6, 10/-; any on approval; see back numbers for scores of testimonials I have published from winners; established 1879.—J. Sandiford, Bird Specialist, and Judge, Preston, Lancs. Telephone 440.

HARRY ALLEN,

THE ORIGINAL LINNET KING.

Champion of all Champions. Patronised by all the leading exhibitors, Mule breeders, and contest-singers. I have the finest strain in the world, bar none. Beware of spurious imitations; they will not give you satisfaction. Mine never fail to please. Please note when buying birds from me you are buying from one who thoroughly understands just what you require, and not from one who copies advertisements and sends anything out. I have the finest Linnets in England. Big fine cocks, well-pencilled, good nutty brown, very tame, 1/6 and 2/- each; extra picked birds, 2/6 each. A few gems 3/- each. I defy anyone to supply birds like these at the money. Big, broad chested cocks in excellent condition, picked specially for muling, 2/6 each. Birds that are sure to give satisfaction. Remember Sergeant Smith, of Leeds, purchased three of the above kind, and bred 68 Mules. Cock Linnets singing beautifully in singing cage, a packet of my special mixture, and instructions how to feed, 3/6 lot. Taught by my champion winner of over 100 first prizes, and which is termed by CAGE BIRDS as a veritable champion. House-moulted cock Linnet in full song, and specially trained for contests, can win, 8/6, 10/6, and 15/6 each, including contest cage. I am supplying winners every week. Clubs supplied. I have a few matched pairs that will give satisfaction, and prove a success to every purchaser. Cock Goldfinch and hen Canary, 8/-; cock Linnet and Canary, 5/-; cock Greenfinch and Canary, 3/6; house-moulted Goldfinch and Canary, bred mules last year, 10/6; house-moulted Linnet and Canary, bred Mules, 10/6; real bargains. Yorkshire Canaries of correct type: I have the finest collection of birds ever seen in bird-rooms. Contradiction defied. Typical Buff or yellow cocks, 7/6, 8/6, 10/6, 12/6 each. Hens, long and racy, and as straight as arrows, 3/6, 4/6, 5/6, 6/6 each; matched pairs to breed show birds, 12/6, 15/6, £1. There is no doubt about it, I can give you the best possible value for money. Hundreds of delighted customers write stating their satisfaction. Inspection invited to the largest aviaries in England. Anyone wishing their birds to sing at one another with their wings down should send P.O. 1/6 for my book of secrets, post free. Four packets of my special mixture, 1/-. Contest cages, 1/6 each, 15/6 dozen. If you wish to possess a winner or be a successful breeder send to me at once, and you will never regret it. All my birds are on seven days' approval, cash or deposit. Only honest dealing done here.—Harry Allen, Bird Specialist, City Aviaries, Beckett Street, Leeds.

BIRD CATCHERS.

Nets, traps, snares, decoys, every description, loose netting twines, every mentionable article for catchers; large 40-page catalogue, illustrated; one stamp; books on birdcatching 7d. each, 24 pages; birdlime boxes 4d.—Samuel Young, Practical Net Manufacturer, Bird Catcher, Crewkerne, Somerset.

MATTHEWS, LINNET KING.

Exhibitors, mule breeders, contest singers, hybridisers.—I am patronised by all the leading Fanciers in the world, and if you want the finest and largest British obtainable at working-men's prices place your orders with me. I have the largest aviaries, and the largest stock of British birds than any man in England. Contradiction defied. Every Fancier who has seen other stocks say the same, and every Fancier has a cordial invitation to see for himself, as I keep every variety, and nothing but the best. I don't say I have what I have not, as you will never be more pleased if you place you orders in my hands for the best team of British. Remember, when purchasing from me you are buying from one who thoroughly understands what you require, and all kinds sent on seven days' approval at my own risk. I have the largest and finest stock of Linnets ever heard or seen; impossible to get the same class of British at this price. I have over 700 selected Linnets on hand, a grand lot with nut-brown backs, well pencilled, steady and correct type, 2s. each. Also a few special Giants for showing, pick of the season, at 3/- and 3/6, impossible to get better. Also a fine lot ready for muling, large Giants with blood-red breast, nut-brown backs, blue heaks, 2/6 each; bargains. All in full song. I have over 100 fierce singing Linnets; been trained under my old noted Cheshire champion, which can be heard singing his grand notes, at 2/6 each, with beautiful singing cage, and a packet of my special mixture, instructions how to feed, 3/6; also a few special fierce moulted Linnets, 4/- and 5/- each. I guarantee you a song at any time with these special trained birds; impossible to get this class of songter at this price. Beware of imitators. Goldfinches: Real Peartree Goldfinches, a few specially picked for showing, with large, deep, square blazes, well buttoned and tanned, 5/- each: for muling, 4/- each. Giant large yellow cock Greenfinches, like Canaries, 1/- and 1/6 each. These are gems for showing and muling. Bramblefinches, Bramblefinches: Over 500 in stock, 1/- each; also a few large show specimens, beautifully spangled, good thigh markings, good deep chest colour for keen competition, 2/6 each; also a few well-paired ready for mule breeding. Linnet and Canary hen, 4/-; cock Goldfinch and Canary, 6/6; Canary and Goldfinch, 7/-; Redpoll and Siskin, 3/6; Siskin and Redpoll, 5/-; Twite and Redpoll, 2/6; Linnet and Greenfinch, 2/6; Greenfinch and Bullfinch, 3/6; also a few Twites; large, well-marked for showing, 1/6 and 2/- each. Also a grand lot of Snowbuntings, Wagtails, Meadowpits, Woodlarks, Wrens, Tits, Crossbills, etc., or any kind of British you require. Gentlemen, read what others say about my birds:—"March 1st. 5, Louisa Street, Wheatley Hill Sunderland.—Sir,—Kindly send me six of your real Cheshire Giant Linnets. They are the birds before all I ever saw, and they are worth looking at and worth any gentleman listening to their splendid song, as I could not believe there was such singing in Linnets before I got them from you, and they all want them round here when they know they come from Matthews, The Real Linnet King.—From Mr. Beechett, to Matthews, Linnet King." From 73, Lisbon Street, Passmonds, Rochdale.—"Sir,—I am perfectly satisfied with the Linnet. He is in full song, and I also won two prizes with him. I am perfectly satisfied who keeps the best. If I want any more I shall send to you. Shall recommend you.—From Mr. Walton, to the Champion Linnet King." From 8, Mainder Parade, Newport, Monmouthshire.—"Sir,—I received Peartree Goldfinch quite safe, after his long journey. I thank you for sending such a large, fine specimen. I don't see why anyone should want to deposit in dealing with a straightforward, honest man like you. Your birds are what you represent them in your advertisement in CAGE BIRDS. You will receive all my orders for future.—From Mr. Probent, to Matthews, Bird Specialist." Gentlemen, do these convince you I send out the best? If not, call and see over 500 testimonials like these. So send at once. Don't be misled with more imitations, as I have sent them out for the last five years. Lifetime experience.—Matthews, Bird Specialist, 44, George Street, Hyde, Cheshire.

CRESTS AND CRESTBREDS.

High-class birds at moderate prices. — W. Turner, 2, St. Giles-terrace, Norwich.

CRESTS AND CRESTBREDS.

I have only seven pairs to part with. The best of blood. Guaranteed my own breeding. Also a few Plainheads.—W. M. Gaze, Ashby, Norfolk.

CHAMPION CRESTS AND CRESTBREDS

bred from my winners at London Provincial Ornithological Society 1906, including championship diploma and medal winners, also Norwich, Crystal Palace, etc., few cheap to clear 7/6 each, upwards; state price. Note: Not a dealer, absolutely all own breeding; cold room; approval.—Woollard, Sprowston, Norwich. The Aviaries, Holsworthy, Devonston, Norwich. The Aviaries, Holsworthy, Devon. January 25th, 1908. Dear Sir,—Bird safely to hand, and gives perfect satisfaction; in fact, very cheap indeed at price. J. Hicks to A. Woollard.

C. ROBERTS' SENSATIONAL CRESTS.

Winners of championships and gold medals for the best in the shows at the Crystal Palace, also the Scottish National and Gateshead great shows; see reports, which says, "the best ever seen," etc. I am offering properly matched pairs of the winning blood for less than you have to pay for rubbish in the ordinary way; Crested cocks and Crestbish in the ordinary way; Crested cocks and Crestbred hens, or Crestbred cocks and Crested hen, bred which way you like, 30/- to 70/- per pair; matched which way you like, 30/- to 70/- per pair; some winners amongst them for a quick sale; the chance of this season; single birds from 15/6; approval.—67, Whitegate-drive, Blackpool.

More than ever!

Better than ever!

Cheaper than ever!

A Marvellous Stock of Crested & Crested Breds.

For instance I will for one week sell you a highly-bred vigorous Crested bred cock for 6/6, cheap at 15/- and would cost much more than that from some. Lot of grand Crests in cocks and hens that must please. See few following prices:—Travelling Cages 3d. extra. No palpable falsehoods about strains given here. **COCKS, 6/6, 7/6, 8 6, 10/6, 15/-, 20/- 30/- 40/-, 60/-** upwards. **HENS, 4/6, 5/6, 7 6, 10/6, 15/-, 20/-, 30/-**, to 60/- upwards. **CRESTED-BRED COCKS, 5 6, 6/6, 7/6, 8 6, 10 6, 15/-, 20/-, 30/-. CRESTED-BRED HENS, 4/6, 8/6, 10/6, 15/-, 20/-, 30/-** upwards. Pairs Matched for Crest Breeding, one Crested and one Crested Bred, **10/6, 12/6, 15/-, 23/-, 30/-, 40/-, 60/-, 100/-** per Pair. See my advertisement in last week's "Cage Birds," page 205 and this week's, page 234.

W. RUDD, THE Bird Specialist, **NORWICH.**

EXCEPTIONAL OPPORTUNITY.

Through increasing business, am compelled to give up the fancy, therefore offer the whole of my valuable stock of the above and cages, at very low prices. They comprise some exceptionally good birds; a few crested hens will be sold separately; may be seen by appointment, or sent on approval.—Mason, 23, Fernie Park-rd., Stroud Green, N.

WICKS BROS., NORWICH,

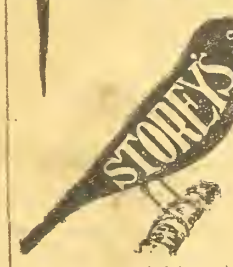
"Up to Date" Bird Specialists,

11, Fortescue Road, Merton, LONDON, S.W

SILK'S CHAMPION NORWICH.

More winners produced from this strain than any other. Birds sold by me have won at most of the all-England shows in keenest competition, and a great number were bred from stock pairs supplied by me. Some of the champion exhibitors owe their success on the show bench to this wonderful strain; procurable only from me. I can supply the champions and give satisfaction, and I will place the novice and amateur on the same footing by giving him exactly the same high-class Norwich at moderate prices. My pairs at 40/6 have no equal, and cannot be bought elsewhere at double; in fact, every bird I send out is double value. Why be disappointed with unreliable strains? Pairs properly matched by an expert and breeder. Special attention given to see that the cock and the hen have the necessary points to breed really high-class specimens. All orders have my personal attention, and fanciers can rely upon getting exactly what they require at moderate prices. Giant stock pairs, 20/6 to 40/6; Yellow cocks and hens, 12/6 to 25/6; ditto Buff, 10/6 to 22/6; approval to any part of the British Isles. A few choice Crests, Crestbreds and Yorkshires. Cream of the fancy reasonable.—A. E. Silk, Whitstable.

The Quality.



I offer you typical Norwich bred from and related to birds that have won Prizes at leading Shows. (No Half bred or foreign rubbish here.) I Guarantee every Customer Satisfaction.

Amongst my stock are many winners and Birds fit to win in Good Company. Every bird for sale at reasonable prices.

Just note the following dates, which can be seen with many thousands of genuine unsolicited testimonials from delighted customers.

144, Handcroft Road, West Croydon. February 29th, 1908.—Bird reached here quite safe, none the worse for its journey. A better match I could not find, and I am very pleased indeed with it. Thanking you for prompt attention.—W. Lester to Miss Storey.

70, Marlborough Road, Brynmell, Swansea. February 28th, 1908.—Bird arrived quite safe and well. I am perfectly satisfied, the bird being far beyond my expectation at the price. Will be sure to give you further orders.—C. H. Edwards to Miss Storey.

New Farm, Madingley. February 29th, 1908. The pair of Norwich arrived quite safe. They are a very nice pair. I am much more than satisfied with such value for money.—F. Saun to Miss Storey.

Cowdenbeath. February 28th, 1908.—Norwich cock arrived in perfect health and condition. I must say I am highly satisfied with it; also the prompt attention. I consider you a very honest and straightforward dealer.—T. Drylie to Miss Storey.

2, Colenso Terrace, Georgetown, February 29th, 1908.—I received the Norwich hen in splendid condition. I am extremely pleased with it and shall surely send you all my future orders.—D. Davies to Miss Storey.

I have a large stock of Good Typical Norwich in sound Healthy Breeding Condition. **Norwich Plainhead Cocks 6/6, 7/6, 8/6, 10/6, 12/6, 15/-, 20/-** each; **Norwich Hens, 3/6, 4/6, 5/6, 6/6, 7/6, 10/6** each; Properly matched Breeding Pairs **8/6, 10/6, 12/6, 15/-, 20/-**. Special Bargains in Show Specimens and Pairs to breed sure winners, **25/-, 30/-, 35/-, 40/-** per pair including winners. **Crests and Crestbreds.** Cocks **8/6, 10/6, 12/6, 15/-, 20/-** each. **Hens 6/6, 8/6, 10/6, 12/6** each. Properly matched breeding pairs **15/-, 18/-, 20/-, 25/-, 30/-**.

A trial order will prove to you I give the best possible value for money. Travelling cages for journey 2d. each. I send all Canaries carriage paid on 7 days' approval. Full illustrated price list of birds, cages, and accessories 1d. stamp; illustrated list of birds post free.

CONTEST SEIFERTS.

Purest Seiferts, last season I bred with cocks that won 1st prizes open contests, at Leeds, 1906, Llandilo, 1907, Gateshead 1906; these are the best birds, hollow roll, deep tone strain, young from the above, cocks 15/-, 20/-, 25/-, 30/-, 40/- upwards; hens, 5/- and 7/6; matched pairs from 20/- to 80/-; guaranteed to breed young for contests; these are bred by myself. I do not keep imported stuff; all birds wearing B.R.C.C. 1907 ring; 3 days' deposit system; approval.—Corkindale, breeder and trainer, Studley, R.S.O.

Hummel Rollers.

Finest Rollers imported. To speak well of the Hummel is to gild refined gold. Testimonials from customers who say the Hummel is still singing as sweetly as when purchased four, five, six, and seven years ago. All Hummels have delightful, deep, delicate bow roll, hollow roll, hollow bow roll, du pipe, hollow bell roll, grand round bass roll vibrating hollow roll, and charming water bubble roll; one price only, 12s. 6d.; no fancy prices; Hummel hens, 3s. each; a beautiful pair of Hummels for 15s. St. Andreasberg Rollers, 5s. and 7s. 6d. each. Hummel Schoolmasters, 20s. each, better than can be obtained elsewhere at treble the price. Thousands of testimonials have been published by me in CAGE BIRDS from satisfied customers. I guarantee strictly honourable trading and satisfaction to all.—Varney, sole proprietor and importer of this remarkable Roller Canary. Twenty years advertiser.—Varney, Stratford, London.—St. Mary Abbey, Mill Hill, December 1st, 1901. Received the Hummel; it sings beautifully indeed. It sings sweetly, and oh, so softly, all day, and I cannot imagine any bird with a more lovely voice; he begins, even these dark mornings, at 7.30, under his serge cover, and sings till 6 o'clock. Although his song is so lovely, it is beautifully sweet, he has no shrill notes, and I am able to read through it. Miss F. Blockett. December 1st., Southfelt, Poynton, Cheshire. Received the Hummel, and am more than delighted with such superior song. W. Glover, to Varney, the largest importer of Rollers in London. January 8th, 1908, Sumner-place, Billinghurst, Sussex. Please send 12 good Hummel Rollers. I have six of your Hummel Rollers; all perfect Rollers. J. Leyland. January 16th, Sumner-place, Billinghurst, Sussex. I enclose cheque for the 12 Hummel Rollers. Am very pleased with them.—Mr. J. Leyland. Oulton Lodge, Aylsham, Warwick, Sept. 20th, 1908.—Mr. Bapha wishes another Hummel Schoolmaster as supplied by Mr. Varney a few months ago. Feb. 24th.—Mr. Bapha has received the Hummel which is again quite satisfactory. Feb. 22, 1908. 20, Bailey Street, Barnsley. Hummel arrived safe. I am more than delighted with such superior song. 7, Brossington. Feb. 22, 1908. Snow Hill, Skelton, Staffordshire. The Rollers to hand all safe and satisfactory.—Geo. Gratton. Feb. 20, 1908., 20, Gladstone Street, Kilworth. Hummel to hand; what a beautiful song; so superior to all other Rollers imported in this district.—W. Pebury. Feb. 20, 1908.—5, Millfield Road, Blengome. I enclose 20/- for another Hummel. I am so delighted with the last one; it is one of the best birds ever heard in this district, and I have seen a few.—The Hon. A. Stevenson. Feb. 22, 1908.—Canaries to hand in pink of condition. I have had birds from all over the kingdom, but never received such value.—J. Smith. List free; sole importer and proprictor of these Rollers.—Varney, the Great Hummel Importer, Stratford, London. 23rd year of advertising.

£50 for YOU.

I offer you £50 if the following Testimonials are not Genuine and unsolicited. I have many thousands open for your inspection all bearing original Post Marks. Note they are dated February 1908, not some old ones that have been preserved for years and the dates altered or crossed out for convenience. I have hundreds bearing February 1908 Post Marks.

Another winner.

Union Street, Gt. Abersychan, Mon. February 27th, 1908.—I require another Roller for a friend. He has some good birds, but would exchange any two for the one you sent me. I won first and special, value £3 3s., with many points to spare, for best songster, and have had numerous inquiries for price of bird, and have referred them to you for the same quality of Rollers as mine at reasonable prices.—J. Jones to Miss Storey.

High Row, Fair Hill, Haltwhistle. February 28th, 1908.—Received H.M.R. on Thursday, and must thank you for same. It is an extra good bird for the money, commencing to sing as soon as unpacked. There is no need to wait for approval.—H. Pearson to Miss Storey.

55, Old Road, Ashton-in-Mansfield. February 26th, 1908.—The Roller is a little champion. I would not like to part with him for twice the price I paid you for him.—Mrs. Johnson to Miss Storey.

19, Newton Street, High Holborn. London, February 28, 1908.—Received Roller safely. I am very pleased with it. He commenced singing soon after arrival. Thanking you very much.—A. Merrurian to Miss Storey.

Old Bank House, Burnley. February 27th, 1908.—I thank you sincerely for prompt delivery of Roller Canary; it is a beautiful bird, and commenced a full song as soon as it entered the cage.—P. Shackleton to Miss Storey.

I undoubtedly supply the best birds it is possible to obtain at the prices.

Genuine Trained St. Andreasburg Roller Cocks in full song by day and artificial light, 8/6, 10/6, 12/6, 15/-, 20/- each. Pure Roller Hens 3/6, 4/-, 4/6 each. **Hartz Cocks.**—The best loud free songsters where plenty of noise is required. Cocks in full lond free song by day and gas light 6/-, 6/6, 7/- each. Matched pairs for breeding songsters 8/6, 9/-, 9/6. Hens 3/- each.

Neat travelling cage 3d. each extra.

New Illustrated List of Birds and Cages, stamp for postage.

All Canaries carriage paid on 7 days' approval at my risk.

Miss E. L. Storey,
Bird Specialist,
CROWLE, DONCASTER.

WARRANTED!

ALSO

Pure Imported Seifert Rollers

(From Contest Winners.)

Cocks & Hens.

Nothing else palmed off for these, if such are required and the price paid.

You have not seen these before.

30, Hastings Avenue, Burnett Fields, Bradford.—Feb. 28, 1908.—The H.M. Roller arrived safely yesterday. It soon made itself at home and has already given us a selection from its musical repertoire.—F. Brown to W. Rudd.

Norton Nibley, Dursley. Feb. 28, 1908. — H.M. Roller safely to hand and gives every satisfaction. Thanking you for your prompt attention.—W. H. Button to W. Rudd.

Oldham. Feb. 26, 1908.—A few weeks ago I recommended a man to you for a Norwich cock. He says the bird is giving satisfaction and started singing as soon as he took the cover off. The Seifert cock you sent me in December last is singing nearly all day long. I will do the same with any more I know wanting birds. I think they cannot do better than send to you for them.—E. Bottomley to W. Rudd.

130, Church Street, Monkwearmouth. Feb. 26, 1908.—Received bird on the 25th in good condition. It commenced singing as soon as unpacked. Quite satisfied with it.—S. T. Herring to W. Rudd.

Great Longstone. Feb. 27, 1908.—Bird arrived quite safe, and was singing under the hour. Am quite satisfied.—C. Blagden to W. Rudd.

2, Fair View, Godstone Road, Kenley. Feb. 24, 1908.—I write to inform you that the Hartz cock arrived quite safe and I am very pleased with the same. He is going on beautifully and gives great satisfaction. Thanking you for same. I shall refer my friends to you should they be wanting a bird. —J. W. Evans to W. Rudd.

Wolverhampton. Feb. 26, 1908. — Bird arrived quite safe. Am very pleased with it. It has a nice soft roll.—H. Drinkwater to W. Rudd.

Glanhowy, Tredegar, Feb. 28, 1908.—Hartz to hand early this morning, quite lively and singing already. I greatly thank you for sending such. If I require a bird at any time shall most certainly send to you.—A. J. Crawford to W. Rudd.

65, London Road, Derby. Feb. 27, 1908.—Bird arrived safe with which I am highly pleased. He had not been in the house an hour before he began to sing. He is singing now from daybreak to dark. All my friends are surprised to hear him.—F. Beltou to W. Rudd.

Please note the following prices.

Cocks, 9/6, 10/6, 12/6, 15/-, 20/- upwards. Hens, same strain, 3/6, 5/- & 7/6 each, Pairs, 10/6, 15/-, 20/-. Singing Hartz Cocks, 5/9 each, Selected, with better notes, 6/6, 7/6, 8/-. Hens, 2/- and 2/6 each, Pairs, 9/6, Matched for breeding good Songsters.

See my advt. in last week's "Cage Birds," page 205 and this week's, page 234.

W. RUDD, THE Bird Specialist,
NORWICH.

F. WAGNER.

Importer of Hartz Mountain Canaries. Wholesale only, 9, Chamber-st., Leman-st., London, E.

HIGH-CLASS Yorkshires, splendid length, type, and quality; cocks from 5/-; hens from 3/-; grand pairs, 8/-, 10/-, 12/6, worth double; approval anywhere; satisfaction guaranteed.—Greenwood, Colnerd., Crosshills, Keighley.

TO make room for breeding, I have a few cocks and pairs of good typo Yorkshires, related to winners, to dispose of cheap; clear, Cinnamon, and Cinnamon-Green mark; approval.—Tetin, 130, St. Mary's-rd., Plaistow, Essex.

A GREAT bargain; six Yorkshires, Sandiford's strain, three breeding cages complete, three show cages and travelling case, double trap cage, lot £3; Canaries worth it themselves; owner going abroad end of month.—Mair, Corrie, Arran.

CHAMPION Yorkshires for sale, same blood as my winners, Stockton, Sunderland, Darlington, Middlesboro', etc.; single cocks from 7/6; hens from 6/6; pairs from 12/6 upwards; approval; all kept in cold rooms.—Frank Stevens, Great Ayton, Yorkshire.

CHAMPION Yorkshires. Why pay fancy prices? Buy from the breeder, and get satisfaction, best of blood, cold rooms, cocks full song, 5/-, 6/-, 7/6, 10/6; hens, 3/-, 4/-, 5/-; selected pairs, 8/6, 10/6, 12/6, 15/6; approval; cash or deposit.—W. H. Berry, Ingrow, Keighley.

H. LINDSAY'S champion Yorkshire. I have one of the finest stocks of Yorkshires in the country for disposal. All my own breed and bred from my winners; few grand pairs left from 12/-; splendid cocks from 7/-, grand length, type and quality; inspection invited; stamp; also some grand Norwich left cheap to clear.—202, King James-st., Walkley, Sheffield.

A. DEARDEN

has only a few pairs of Cinnamon-marked and clear pink-eyed Yorkshires left, from 10/6 pair; cocks from 6/- each; approval; P.O. or deposit.—Spring-st., Brighouse, Yorkshire.

YORKSHIRES, all colours, including greens, cocks, 5/-, 6/-, 7/6, 8/6, 10/- upwards; hens, 4/-, 5/-, 7/6 upwards, cold-room bred; 7 days' approval.—

SAMUEL DEAN,
6, Ashmount, Gt. Horton, Bradford

W. H. SPENCER,

after selecting my own stock, has for sale a few grand Yorkshires, properly matched, pairs related to my winners; reasonable; inspection invited; three day's approval; stamp.—Palmer-rd., Wadsley Bridge, Sheffield.

J. WILCOCK.

I have now ready some grand exhibition birds, both Yorkshires and Norwich Plainheads, for sale, any on 3 days' approval, satisfaction guaranteed or full money returned.—14, Chapel-st., Eccleshill, near Bradford, Yorkshire.

WALSH'S YORKSHIRES,

same strain as my winners; some smart Buff and Yellow cocks at 8/- to 20/-; Yellow hens from 5/-; cannot be beaten for quality and style; sure to suit, or money returned; cash or deposit.—12, Angelst Baildon, Yorks.

THE FINEST YORKS PROCURABLE.

Several really smart pairs at a most reasonable price; all my own breeding; approval.—Binns, Albert-terrace, Blackpool.

J. G. SHUTTLEWORTH.

I have 24 Yorkshires left, 16 cocks and eight hens, in Yellows and Buffs; cocks from 5/-; hens from 4/-, or offers for the lot, or exchange; what offers in Hybrid Tea Roses; approval.—13, Moss-st., Keighley.

BROUGHTON YORKSHIRES,
WINNERS OF Y.C.C. OUTSIDE CUP.

Can spare two pairs I have reserved for myself; both cocks are winners; prices reasonable; approval; stamp reply.—Wilfred Broughton, Westholme, Wilmslow.

AMBLER'S YORKSHIRES.

For purity of breed, type, stylo and quality, our strain has proved the finest in the fancy for over 25 years. As we are reducing our breeding stock, we have for sale a few real gems, cocks and hens, plenty of length, perfect shape and feathered to perfection, possessing all the qualities to breed big winners, pairs from 20/- to 70/-; hens, 10/- to 30/-; what we offer are the highest possible breed, and better Yorkshires cannot be bought; satisfaction guaranteed; stamp particulars.—17, Lytton-rd., Bradford.

A GENUINE OFFER.

Mr. Marsh invites you to call any time and inspect his Yorkshire Canaries; over 300 high-class birds on show for your approval at working man's prices, in Yellow, Buff, Variegated, and colour-fed; cocks, 5/6, 6/6, 7/6, 8/6, 10/6, 12/6; hens, 3/-, 3/6, 4/6, 5/-, 6/- 10/6, 12/6; matched pairs, to breed winners 8/6, 10/6, 12/6, 15/-, 20/-, 25/-; a trial order will prove type and quality; sent carriage paid on seven days' approval; cash or deposit; travelling cage, 2d.—Freemason's Aviaries, Mercerou-st., Brady-st., Whitechapel-rd., London.

CHAMPION YORKSHIRES.

Important Notice. — If you want long, slim, straight, upstanding Yorkshires, with feather like silk and in the prime of condition; write or call and see the finest and largest stock in London; every cock bird in full song, and on six days' approval. I have them in all colours. Yellow cocks, 7/6, 8/6, 10/6, 12/6, buff cocks, 6/6, 7/6, 9/6, 11/6; Yellow hens, 4/-, 4/6, 5/- 5/6; buff hens, 3/6, 4/-, 4/6, 5/-.—Note the address, Wm. Shaw, 97, Essex-rd., Islington, London, N. Five doors from Cross-st. All cars stop at Cross-st.

CHAMPION YORKSHIRES!

Splendid stock of high-class Yorkshires, typical birds, fine feather, buff cocks 5/6, 6/6, 7/6, 10/-; yellow cocks 6/-, 7/-, 8/-, 10/-; pairs 8/6, 10/6, 15/-, £1; hens 3/6, 4/6, 5/6, 7/6; all cocks on song; large Norwich Crests, and Crestbreds, good type and plenty of feather; cocks 8/6, 10/6, 15/-; hens 5/6, 6/6, 7/6, 10/-; pairs 15/-, 17/-, 20/-; Norwich Plainheads, Bullfinch type, buff cocks 5/6, 7/6; yellow cocks 6/-, 7/6, 10/6; hens 3/6, 4/6, 6/-; all cold room; travelling cages, 3d.—Arthur Thompson, 197, Bradford-rd., Frizinghall, Bradford.

J. C. BARNES,

challenge cup winner, 1905-6-7. Having selected own breeders, can spare few grand birds, very lengthy, capital position, well on leg and feathered like wax. Reasonable approval; stamp; pairs correctly matched; all related to my winners.—149, Duncombe-st., Walkley, Sheffield.

HIGH-CLASS

Yorkshires in all Varieties.

Length, type and quality—Read these testimonials and scores more received during past few days:—55, Sant St., Dalehall, Burslem, Feb. 23, 1908—Pair birds safely to hand and I am highly pleased with them. Shall recommend you to all I can.—H. Hancock to J. Taylor. Another from 117, High St., Boston, Feb. 22nd, 1908—Bird arrived here quite safe and gives every satisfaction. Enclose order for another. P. F. Emery to J. Taylor. Inspection invited any day and at any time. EASY PAYMENT SYSTEM.

NOTE.—Birds sent off at once on receiving first payment. Stock and Show Yorkshires, Norwich, and Crests. Send Stamp for full particulars and terms. All on seven days' approval. Only and old address:

J. TAYLOR,

9, NORTHDALE ROAD,
FRIZINGHALL, BRADFORD.

WINNERS

AND

STOCK BIRDS

I can sell you the **WINNERS** because I do not show them; and instead of charging you £3 or £4 each, I give you equal value at 30/- and 40/-; pairs also to produce the highest class specimens at **20/-**. Other good, well-bred specimens at following prices:

Cocks, 5/6, 6/6, 7/6, 8/6, 10/6, 15/-, 20/-, 30/-. Hens, 3/6, 4/6, 5/6, 7/6, 10/6, 15/-. Pairs Matched for Breeding, **8/6, 9/6, 10/6, 12/6, 15/-.**

All on approval. Travelling Cages, 3d. extra.

I can give you entire satisfaction whatever price you select, that is, if satisfaction is possible, for I have a reputation at stake. See my advertisement in last week's "Cage Birds," page 205, also this week page 234.

W. RUDD, THE Bird Specialist, NORWICH.

Champion Yorkshires

1st, 3rd, VHC, etc., Crystal Palace.

Birds sold from this strain to Mr. C. Blackhurst won above.

ALL Mr. BATES' NOTED STRAIN

of Yorkshires. I bought his 20 years' strain, which won last season 20 firsts, 18 seconds, 16 thirds, etc.; also 3,000 prizes this last 20 years, including firsts at Crystal Palace. A few marvellous pairs, 14/-, 16/-, 18/-, 20/-, 30/-, pair; odd cocks and hens, from 5/-, 6/-, 7/6, 8/6, 10/-, 12/-, 15/-, 20/- each; any on approval. Young birds, bred from above strain, have won top prizes at Accrington, Burnley, Manchester, Cardiff, etc., this season.

J. SANDIFORD, CANARY BREEDER,
Established 1879. **PRESTON, LANCS.**

I AM SURE

There is no doubt about it. I can give you the best possible value for money. Thousands of delighted customers write stating their satisfaction.

Staddlethorpe, R.S.O. February 27th, 1908.—Received Yorkshires safely; they give every satisfaction, in fact they are the best I ever had. I shall most certainly send to you again for more birds.—Wm. St. Paul to Miss Storey.

Heybridge, March 1st, 1908.—Birds arrived in perfect condition. They are the very birds I required. Thank you.—T. Fenton to Miss Storey.

30, Hollywood Road, Liverpool. March 1st, 1908.—The Yorkshire cock I received five days ago is perfectly healthy and good style. I am much pleased with him.—J. White to Miss Storey.

9, Dene Terrace, North Shields. February 29th, 1908.—I am highly pleased with Yorkshire, which gives every satisfaction; he is a beauty and well worth the money. Wishing you every success.—G. Turnbull to Miss Storey.

12, Penfold Abbey, Darlaston. February 28th, 1908.—I thank you for splendid Yorkshire, which arrived in splendid condition. I am highly satisfied, and thank you for your straightforward work. Sy. Dudley to Miss Storey.

16, Walkden Street, Mansfield. February 29th, 1908.—Received Yorkshires safe; I am delighted with them. They give great satisfaction. Many thanks for kind prompt attention.—J. Green to Miss Storey.

Liverpool, February 2, 1908.—I beg to inform you that I received bird this morning. I am perfectly satisfied with it. I must give credit where it is due, which means further business.—J. Blakeley to Miss Storey.

I have many Thousands of similar letters from delighted customers. I have the largest and best collection of Canaries ever seen in Bird Rooms, birds that will give you every satisfaction. (No half bred or common German rubbish), but **Genuine, Typical, Upstanding Yorkshires, bred from and related to winners.**

Yorkshire Cocks 6/6, 7/6, 8/6, 10/6, 12/6, 15/-, 20/- each; Yorkshire Hens, 3/6, 4/6, 5/6, 6/6, 7/6, 10/6, 12/6 each; Properly matched breeding pairs 8/6, 10/6, 12/6, 15/-, 20/-. Special Bargains in Show Specimens and Pairs to Breed sure winners at 25/-, 30/-, 35/-, 40/- pair, including winners.

Neat Travelling Cages 3d. each extra. **All Canaries carriage paid to your door on 7 days' approval at my risk.** New Illustrated Price List of Birds, Cages, etc. 1d. stamp for postage. Illustrated Price List of Birds, post free.

Miss E. L. STOREY, BIRD SPECIALIST

CROWLE, DONCASTER.

All on approval. Simply state wants. Correspondence a pleasure. Send to-day for current price list of birds and catalogue of all appliances, post free. Post and telegraphic address, Wicks Bros., Norwich.

WILCOCKS' YORKSHIRES.

Winner of the L. and P.O.S. Challenge Cup, 1907 and 1908; also champion diploma Cinnamon-mark at Crystal Palace, and I am second for the Cinnamon mark trophy and second for the Yorkshire Club specials and third for the Yorkshire challenge cup, and third for Shackleton's trophy, those are five of the largest trophies for Yorkshires, I think this will prove to my brother fanciers that my Yorkshires are of the best. Having selected my breeding stock, I find that I have some extra good stock birds for sale, this is an exceptional opportunity for you to breed your own winners, matched pairs from 20/- to 60/-; cocks from 10/- to 40/-; hens from 7/6 to 30/-; sure to give satisfaction, or your money returned; all birds sent on three days' approval; cash or deposit.—14, Chapel-st., Eccleshill, Near Bradford, Yorkshire.

THE NOTED PARAGON YORKSHIRES.

Having won the much-coveted 321 Yorkshire Challenge Cup, 1908, for the fourth time, is ample proof that the "Paragon Strain" is what the name implies, viz., the best of its kind the world can produce. I am the only exhibitor that ever won this valuable trophy outright, namely in 1903-4-5. I did not compete the two following years to allow others to come to the front. In 1906 I secured the Cinnamon-marked Trophy, and in 1907 I won the "Amalgamated Yorkshires," 25 guinea Challenge Trophy. In two successive years at the Crystal Palace my birds were awarded 13 firsts, and other prizes, including about 20 cups, medals, and specials, such a record has never been equalled by any other firm or fancier of the present day. The above are incontrovertible facts, and are not wild, exaggerated statements of advertising bluff and bounce to catch the inexperienced fancier. My birds come to the front year by year with the same regularity as one day follows another, thus proving beyond question that pedigree breeding is the royal road to success, as blood is bound to tell. I have bred and sold more noted winners during my career than any other firm. One client alone who had all his birds from me, won in his first season 63 specials and prizes. Further comment would be superfluous. I have for disposal some of the best that money can buy for length, style, position, and quality they cannot be excelled. Cocks, hens, or matched pairs to breed the best, prices reasonable; three days' approval; stamped address for particulars.

W. H. SHACKLETON,
South Bank House, WIBSEY, BRADFORD.

ONLY

Specimens of a very few of the Complimentary letters received during the past week. But they are worth reading if you are

Interested in Such.

See Page 205 Last Week's "Cage Birds."

They are open for inspection, as are also the Birds, and their owner will be pleased to show you round himself, for not hiding his identity behind any fictitious name no subterfuge methods have to be resorted to, and this I consider cannot be too widely known.

Simcoe, Ontario, Canada. Feb. 17, 1908.—I must say I am more than pleased with the Norwich Canaries which you sent me out, and every person who has seen them thinks they are fine birds.—A. McGee to W. Rudd.

ALL ADVERTISEMENT SAYS.

64, Wheldrake Road, Pitsmoor. Feb. 26, 1908.—Received birds quite safe, and am highly satisfied with them. They are all the advertisement says, and again I say I am more than pleased with them.—W. Wilson to W. Rudd.

Laisterdyke, Bradford. Feb. 27, 1908.—I am very pleased with the crested birds you sent me, also the buff hen. The Asthmarine is very good. I had a bird suffering with asthma for 12 months. He is now singing.—E. Gayton to W. Rudd.

GOOD VALUE FOR MONEY.

Union Street, Bridgtown, near Cannock. Feb. 28, 1908.—I received birds safe this morning and I am very pleased with them. The buff cock is a beauty, and good value for money. If I want any more, I shall certainly send you my orders, and will recommend others.—E. Weals to W. Rudd.

ENTIRE SATISFACTION.

50, Orme Road, Bangor. Feb. 27, 1908.—I beg to acknowledge receipt of Yorkshire hen, which is to my entire satisfaction. Thanks for the prompt execution of my order.—J. Bartley to W. Rudd.

VERY PLEASED.

259, Green Street, Victoria Park, London, N.E.—Feb. 28, 1908.—The Yorkshire hen arrived safely this morning, and I am very pleased with it.—F. White to W. Rudd.

JUST THE THING WANTED.

Arbroath. Feb. 28, 1908.—I received Norwich hen all right, and in splendid condition, and I am very well pleased with it, for she is a nice bird, and just the thing I was wanting. It is my first order, but it won't be my last.—J. Thomson to W. Rudd.

ALWAYS CHARY OF HAVING FROM A DISTANCE.

Waverley Arms, Southsea. Feb. 29, 1908.—I received birds safe in good condition. I have always been chary of having birds sent from a distance, but after this I would rather deal with you than with the shops. E. Edge to W. Rudd.

JUST WHAT WANTED.

49, The Crescent, Slough, Bucks. Feb. 29, 1908.—I am pleased to say I received the clear buff York hen safely on Thursday morning. It is just the bird I wanted, and am very pleased with it. I can strongly recommend you to anyone that is in want of good birds. E. Baldwin to W. Rudd.

"EGGERTINE"

It is the best, purest and greatest bone and muscle forming food ever known, as the analytical reports of most eminent authorities prove. It is a genuine egg food made with fresh laid English eggs, with white, of course, included (and NOT foreign preserved yolk of egg), with other valuable properties combined. Tins, post free 1s. 3d.; large size 2s. 6d. There is a saving in the larger size.

"ASTHMARINE"

IT SAVES WHERE OTHERS FAIL.

The greatest remedy ever brought before the Fancy, and has the largest Sale of any similar article by far. Beware of imitations! For all lung affections it is marvellously efficacious — not a liver burner, but both soothing and healing. Thousands of testimonials received for this article alone. 9d. and 2s. 6d. per bottle, post free. Once used always kept ready for any sudden attack.

The following genuine Bargains will bear repeating, as it is impossible to obtain such elsewhere:

IMPORTANT TO MULE BREEDERS

These are not last week's:—

First prize Mule.

Londonderry, Ireland.—The light Mule I bought of you took first prize. It was entered by Jno. Stephenson; perhaps you have seen the notice in the paper.—J. Donnel to W. Rudd.

A Champion Mule.

Balmoral House, Balligatr. I am anxious to secure two large hens for dark mule breeding. I got two hens from you some years ago, and I bred a Champion dark Linnet Mule from one of them, a winner of many first prizes, including twice first at Edinburgh.—J. Waddell to W. Rudd.

Several very good lightly marked mules.

Westleigh Stables, Buckley, Kent. Feb. 21, 1908. Please send me price of good yellow Norwich hen. I want her for light muling. One I had from you some time ago turned out very satisfactory, breeding me several very good lightly marked mules. Hope you will be able to give same satisfaction this time. —S. S. Pilcher to W. Rudd.

Thirty mules from one Goldfinch.

Clift Terrace, Newtown, Carlisle.—Kindly send Whitelegged rock Goldfinch, for order enclosed. I am glad to tell you that I did well with the last Goldfinch, having got thirty mules last season from him. Have recommended you to several acquaintances.—J. Taylor to W. Rudd.

Scores similar to above relating to Muling Hens only, supplied by me, could be given. I now have a grand lot, including many pink-eyed and Cinnamon blood. Please note prices:—Clear Buff Hens, 3/6, 4/-, 5/-, 6/6 each; Yellow Hens, for Light Mule breeding, 5/6, 7/6, 10/6 each; Hens, for Dark Mule breeding, 3/6 and 5/- each; Yellow Cocks, Light Muling, 10/6, 12/6 each; Buff Cocks, for Light Muling, 8/6, 10/6 each, all on approval; travelling cages 3d. extra.

See my advertisement in last week's "Cage Birds," page 205, and this week, page 231.

D. DE VON,

114, BETHNAL GREEN ROAD, LONDON, E.

REMEMBER

that the "Improved Seeure husks are guaranteed not to break or fall to pieces as other kinds do. They are entirely different to any others, and are procurable from me only. They have been favourite for 17 years. Every fancying paper extols them. CAGE BIRDS has said: "They are far superior to the old husks." So beware of paper puff and worthless substitutes. Price, 1/6 dozen; smaller quantities, 5d. each. Interesting pamphlet, entitled "Budgerigar Breeding," free on application. Superior box nests for cockatiels, 1/6 each.—Harper, Upper Villiers-st., Wolverhampton.

C. A. LUER.

Grey Java Sparrows, 1/-; Black-headed Nuns, Spice birds, 1/6 pair; Cordon Bleus, Cutthroats, Silver Bills, Bronzewings, Mannikins, Whydahs, Weavers, Bishops, 2/6 pair; Waxbills, Combassous, 2/- pair; Lavenderlinches, Singing Finches, 3/6 pair; German cock Bullfinches, 3/6; hand-reared ditto, 5/- each; Green adult cock Budgerigars, 2/-; yellow, 3/6 each; Green adult Budgerigars, for show or breeding, 5/-; yellow ditto, 7/6 pair; husks 3 for 1/-.—C. A. Luer, 121, Leman-st., London, E. Telephone 7504 Central. Dealers write for wholesale list to above address, and at 32, East-st., Walworth, London, S.E.

COKERNUT HUSK NESTS.

Having received a superb cargo of 35,000 Husks the largest and best I ever saw, I can dispatch all orders same day as received. Satisfaction and success are assured when you use nests of my manufacture. **"The Unbreakable"** Cokernut Husk nest for Budgerigars, etc.; Small 2/-, Med. 4/-, Large 6/- doz. Sample Set, carriage paid 1/3. **The Cosy,** Cokernut Shell nest for finches, etc. Small 2/-, Med. 4/-, large 6/- doz. Sample Set 1/3, carriage paid. **The Ideal,** Box nest for Cockatiels, Parrakeets &c., 1/-. Superior make and varnished, etc. 1/6. Every user praises this nest box. Trade terms on application.

PEARSON, Wholesale Cokernut Merchant, GREENWICH MARKET.

PARROT PROBLEM

solved. For full proofs send postcard at once for my large book, "Parrot Prattle," now containing 108 pages. This is the most wonderful book ever offered free of all charge to all Parrot fanciers. (This "Parrot Prattle" is registered copyright, and all infringers and imitators will be proceeded against). It contains hundreds of testimonials from all parts with full names and addresses, many interesting facts, and gives valuable advice and hints to all Parrot buyers. Full details of our original system of selling Parrots on four week's trial, at our risk, which we were the first to introduce. We sell Parrots of all description on four weeks' trial, at our risk, before settlement. Cheapest and best in the Kingdom, and any Parrot sold by us, and not giving full satisfaction, will be exchanged any time within twelve months. Remember we lead and others try to follow. Write to other dealers as well as us, and judge for yourselves. Lists of Parrots for sale and above book post free on receipt of postcard.

PARROT AVIARIES, MORECAMBE.

Advertisements Continued on page 246.

I have done exceedingly well through my "ad." in CAGE BIRDS, writes Mr. T. Yates (Reading). Have had a job in fact to cope with the orders. That speaks well for CAGE BIRDS, which is the best birdy paper on the market. I wish it every success.

Through an advertisement in your excellent paper, CAGE BIRDS, writes Mr. Turnbull (Glasgow). I had enquiries from all parts—all the way from Toronto, for example. Sorry I was not able to comply with the requests of my Canadian friends, my birds in the interval being all sold. I hope they got suited elsewhere. What a wide circulation has CAGE BIRDS, to be sure, and deservedly so, as being the most reliable and best all-round paper on the subject of cage birds in existence.

TWITTERINGS.

I had very satisfactory results from my last advertisement in CAGE BIRDS, writes Mr. H. Jordan (Oswestry).

The balance sheet of the City and Suburban A.C.B.'s recent Pair Show, to hand from the secretary, shows a profit of £1 9s. 6d.

We hear from Mr. G. H. Billett (Reading) that he has been elected to judge cage birds at the Totterdown, Bristol, show on July 24th.

I have moved from 10, Poulett Road, East Ham, writes Mr. H. Gravestock, to 102, New City Road, Barking Road, Plaistow. I wish CAGE BIRDS every success.

Kindly note that I have been engaged to judge at Morpeth and District C. and C.B.S. show, to be held on October 17th next, writes Mr. W. P. Barnes (Grantham).

Kindly announce in CAGE BIRDS that I have removed to Idahoe, Oakland Avenue, Prestbury, Cheltenham, writes Mr. A. S. Treasure, secretary of the Cheltenham C.B.S.

Kindly thank all who replied to my advertisement in CAGE BIRDS last week, writes Mr. Geo. Woodbridge (Freckenham). I had so many offers I could not reply to them all. I wish CAGE BIRDS every success.

Kindly thank those who applied for the Crests I advertised in your splendid paper, CAGE BIRDS, writes Mr. W. Dalgetty (Scarborough). They are all sold. I had very many letters and Postal Orders; about 50 in all.

Kindly state that all correspondence and enquiries relating to the Great Horton Good Intent O.S. should be addressed to me, writes Mr. Harry Schofield, hon. secretary, at 137, Baildon Road, Great Horton, Bradford.

Will all members of the Deptford and Greenwich C.B.S. make an effort to attend a special meeting to be held at headquarters, "Two Brewers," Church Street, Greenwich, on Feb. 12th, writes Mr. E. Meades, secretary.

Kindly thank those that replied to my advert. in your last week's issue, writes Mr. H. Pitts (Bedminster). I should want a private secretary to reply to them all. Advertising in CAGE BIRDS is better than answering limericks.

The Hastings United C.B.S. have decided to hold their annual show on November 10th and 11th, at the Parish Hall, Priory Street; writes Mr. A. E. Godden, the hon. secretary, and Messrs. J. Robson ad Geo. Gardner have been elected to judge.

Messrs. H. Lindsay and W. Bingham have been elected secretaries of Sheffield and Dis. Cage Bird Society, writes Mr. H. Lindsay (Sheffield), and all correspondence should be addressed to them at 202, King James Street, Walkley, Sheffield.

The Wandsworth and District Fanciers' Society is rather short of members interested in cage-bird keeping, writes the hon. secretary, Mr. W. Summers (829, Garratt Lane, S.W.), and I shall be pleased to hear from any desirous of joining.

The short advertisement you inserted for me two weeks ago writes Mr. W. Page (Wimbledon), brought so many replies that I could not answer them all. I am glad to say that a satisfactory exchange was speedily accomplished, thanks to the fine circulation of CAGE BIRDS.

Having sold all my Larks which were in full song, and which were advertised in CAGE BIRDS, kindly cancel my advertisement for the time being until I advise you to continue same, writes Mr. E. Cash (Birkenhead).

We hear that the Alnwick and District Cage Bird Society is making great headway, and looking forward to a very successful season, and the secretary, Mr. R. F. Rennison, of 3, Pottergate Place, will be glad to hear from fanciers in the neighbourhood who would like to become members.

We extend a very hearty invitation to all fanciers, writes Mr. G. Dowden, secretary Stoke Newington F.A., to a lantern lecture on "British Birds," on March 31st, at Devonshire Square Church, Stoke Newington Road, at 8 p.m. Illustrated by 150 beautiful lantern slides; admission free.

A Bittern has recently been shot near the mouth of the river Tivy, writes Mr. D. J. Thomas (Cardigan), within two miles of Cardigan. A Golden Eagle has also been brought down by the "man with the gun" near a village in North Pembrokeshire, within six miles of this town. What, may I ask, is the use of Protection?

An excellent series of members' shows has been arranged by the Bradford (East) O.S. The first of these was held on February 22nd. The second of the series will be held on June 13th, when Mr. R. Halliday will judge; another will be held on July 25th (judge, Mr. H. J. Chittenden), a fourth on September 26th (judge, Mr. W. H. Shackleton), and a fifth on December 15th (judge, Mr. J. Bailey) Some good specials are on offer thereat.

OUR PUZZLE PICTURE COMPETITIONS.

Intending competitors must remember that our two competitions in connection with the puzzle picture of Norwich Plainhead Canaries which appeared in our issue of February 15th last, (the Crystal Palace Show Number) close

uesday Next, March 10.

Full particulars of these competitions appeared on page 214 last week.

POST YOUR ENTRIES IN GOOD TIME.

The Huddersfield O.S. has arranged a splendid series of lectures, members' shows, judging competitions, washing exhibitions, etc., for the 1908 season. The secretary is Mr. S. Lodge, 34, Jacob's Row, Lockwood.

The Plumstead and Woolwich C.B.S. seems to have made both ends meet nicely during the first year of its existence, judging from the balance sheet which reaches us from Messrs. Pawley and Newnham, the secretaries. This promises well for the future prosperity of this go-ahead metropolitan society.

The first annual distribution of prizes will take place in the Market Tavern on March 7th, at an amalgamated concert and smoker with the Y.C.C. Cinnamon Marked Canary Club and Yorkshire Union, writes Mr. W. R. Myers, hon. secretary of the Bradford and County B.B. and M.C. We hope members will be present from all parts of Yorkshire.

Bird-keepers in need of seeds should send a post-card for the price-list (post free on application of Mr. J. Keenlyside, Zetland Street, Sunderland, a merchant who has laid in large stocks of the choicest quality seeds specially for fanciers, and also of other requirements of the birdy-man. Real honest business, and the best possible value for money, is our motto, writes Mr. Keenlyside.

In the hurry of penning my report of the Kent County C.B.A., which appeared in your valuable columns last week, writes Mr. George Sanderson, the hon. secretary, I omitted stating that Mr. Ashby (the City Tailoring Co., Dover), also gave a handsome E.P. tankard for the best bird in the show, to be won twice before becoming the absolute property of the winner. This year's winner is Mr. L. A. Brett (Folkestone).

We have received a copy of the Glasgow and West of Scotland N.M.B. and F.B.C. syllabus and rules for the current year from the secretary, Mr. R. A. Brown, which includes three shows of British Birds on March 31, April 28, and May 26; a First Feather show on July 4; the open show on November 13 and 14; annual members' show on December 12; and a picnic on June 13. It is an excellent programme, and should add considerably to the success of the society.

The newest recruit to the ranks of London cage-bird societies, the Highgate, Hampstead and District C.B.S., was successfully floated last week, upwards of 40 members being enrolled. The subscription was fixed at 3s. per annum, and Mr. G. Gardner was elected chairman. The hon. secretary, Mr. W. Reynolds, 62, Langdon Road, Upper Holloway, N., will be pleased to hear from anyone in the district (or outside, as there is no radius limit) who would like to join. An attractive programme of events is being arranged.

Dulwich and Peckham C.B.S. have fixed their Young Bird and British Bird Show for Thursday, July 2nd (judge, Mr. Robson), writes Mr. Hodson, the hon. secretary. The annual open show is fixed for Thursday and Friday, November 5th and 6th, and the judges are Messrs. G. E. Weston, J. Robson, and H. Broadley. Both shows will be held in the Peckham Public Hall.

The balance sheet of the City of Glasgow Ornithological Association for 1907 reaches us from the joint secretaries and treasurers, Messrs. A. Muir and A. Macdonald, and is one of the most satisfactory we have ever inspected. The total income was £362 15s. 6d., and at the end of the year there remained a cash balance in favour of the Association of no less a sum than £116 4s. 10d., as against £105 the previous year. Such a state of affairs speaks for itself, and reflects the highest credit on all concerned in the management.

I never expected to see my Scotch National winning Yellow Green Border Cock depicted on your front page, writes Mr. W. McMillan (Dumfries). I may say that it is bred from Greens that have stood the test of the show bench for the last 20 years. It has been five times shown. At the Glasgow and the West of Scotland it was placed fourth; at Sanquhar, first; at the Scottish National first. I have since sent it to the Crystal Palace, where it was v.h.c. I am quite satisfied with its performances for its first year. I thank you for the honour conferred on me.

The rather bold experiment which was made by the West Bromwich and Dis. C.B.S. in holding an open show in the first year of its existence (a thing that probably no other Midland society has done) writes a local correspondent, was justified by the result, for the show realised a profit of £4, notwithstanding heavy expenses due to unavoidable causes. It is greatly due to the splendid work of the hon. sec., Mr. T. Duffield, and the assistant sec., Mr. J. H. Jennings, that the society has made such excellent progress, and to mark their appreciation of these officers' services, the members have presented to each a handsome silver mounted walking stick.

Of Course You Do.

Do you want to know the up-to-date methods of breeding Canaries and Hybrids? You will find them explained in easily-understandable manner in CAGE BIRDS ANNUAL. This splendid publication also contains the only lengthy, up-to-date, and thorough article obtainable on the diseases of birds and their treatment. Many other features absolutely indispensable to the bird-keeper will also be found in its pages, and it is replete with charming illustrations, and contains a lovely coloured plate. It should be on the book-shelf of every lover of birds. Send a postal order value sevenpence to the Manager, "Cage Birds Annual," 154, Fleet Street, London, E.C., and get a copy by return, post free.

Cage Birds Annual

—For 1908—

The Standard Guide to the Fancy, IS

A MARVELLOUS SIXPENNYWORTH

—absolutely the best ever put before the Fancy.

READ THE FOLLOWING:

I think CAGE BIRDS ANNUAL is simply splendid.—A. Etherington (Chippenham).

I thank you very much for the ANNUAL, which I consider an excellent book.—J. Webb, (Nottingham).

I think CAGE BIRDS ANNUAL this year is a real treat—just what we want in fact.—T. Keegan (Bristol).

I am highly delighted with CAGE BIRDS ANNUAL. If I had to pay a shilling for it I should still be satisfied with it.—Thos. S. Bell (New Washington).

I am much obliged to you for the ANNUAL, which I think is a credit to you, and is fully worth double the money to those in the Fancy.—H. ORFORD (Manchester).

The CAGE BIRDS ANNUAL this year is a splendid piece of work, and every lover of birds should have one, for I am sure it is a great help to success.—W. Lawton (Glossop).

No fancier should be without a copy of CAGE BIRDS ANNUAL, as the articles and illustrations are simply grand; also the list of cage bird troubles and their treatment by experts is of greater value to fanciers, large or small, than the small price of the book.—G. F. ADAMSON (Kilmarnock).

Kindly accept my best thanks for the copy of CAGE BIRDS ANNUAL just to hand. The ANNUAL is brighter and better than ever. It is a wonderful sixpennyworth, a credit to the publishers, and a book that no fancier should be without.—John S. Napier, Secretary of the Arbroath Scotch Fancy C.B.S.

Many thanks for the ANNUAL. Being a constant reader for five years, I think it is the most interesting book I have received. No breeder's room is complete without it. I am more than pleased with the number of orders I have had during the past week through my advertisement in it. Wishing the book every future success.—E. J. Clark (Stockwell).

CAGE BIRDS ANNUAL to hand. I must say it is a marvellous sixpennyworth, "chock full" of sound, practical and valuable information for all branches of the hobby, besides the hundred and one little items a bird lover wants to know. I think it should find a place in every cage bird fancier's bookshelf. I wish your valuable paper, CAGE BIRDS, every success.—F. Kivell (Bideford).

A charming new cover, many beautiful illustrations of winning birds printed on art paper, a lovely coloured plate for frontispiece, a complete revision of all the popular features, and the addition of strikingly useful new features, mark this 1908 issue.

The articles, too, have never been excelled, and both Canary, Hybrid, British and Foreign bird keepers have been specially catered for. The needs of the beginner have likewise been given the fullest consideration.

Bird-lovers should hurry up and secure their copies at once. Get one Post Free by return by sending a

Postal Order value SEVENPENCE

To The Manager,
"CAGE BIRDS,"
154, Fleet Street, London, E.C.

The Scottish British Bird and Mule Club appears to have got through a good and interesting year's work with great success, as, after catering liberally for its members at the shows patronized, a balance of £2 18s. 3d. remains in hand. We note that the energetic secretary, Mr. R. Farmer, expresses a desire to retire from office, after three years' labour on behalf of the club.

The Northern Crest Club seems to have had a most successful season. Its balance sheet to hand, duly audited, from the hon. secretary, Mr. T. Robson, shows £5 16s. 4d. cash on the right side (a gratifying increase on the previous year), with two cups, value £5 5s. each, as additional assets. This result, and the good work done by the club, reflect credit on all concerned in its management.

From the balance sheet of the Hertford Fanciers' Association we gather that despite the fact of the gate being £8 down as compared with last year, the recent show has come out with a balance in hand of 4s. 2d. Our Hertford friends are a plucky and courageous lot, and are most admirably led by Mr. "Pat" Harrower and Mr. Fred Looker, whose efforts receive loyal support from a splendid committee. The good management of the show so commends itself to the leading lights of the neighbourhood that the subscriptions and specials received from patrons and vice-presidents total over £28.

The proper building, fitting, and management of aviaries, bird-rooms and cages, are matters every bird lover is deeply interested in, and matters on which an up-to-date book, dealing thoroughly with these subjects, was badly needed. CAGE BIRDS latest hand-book, entitled "Aviaries, Bird-rooms, and Cages; their construction and furnishing," should thus fill a long felt want. It has been written by that well-known fancier, Mr. H. Norman (CAGE BIRDS artist-in-chief), who has illustrated it with a wealth of helpful drawings. There are also ten lovely full-page photographic plates. The whole is beautifully bound in cloth, gilt, and the price is 2s. 3d. post free. Send a postal order to our manager at once for this grand production, and get a copy hot from the press by return of post. It is a work that must be on every bird lover's bookshelf.

The committee of the Hartlepools C.B.S., writes Mr. E. Woodhead, the secretary, are desirous of thanking most sincerely all those who in any way contributed to the success of their Prize drawing. It is most gratifying to us (and it must also give a considerable amount of satisfaction to helpers) to be able to state that all our liabilities have been discharged, including a loan of £5 from one of our members, who advanced this sum in order that initial expenses and prize money could be paid. This spirit, I, as secretary, am most pleased to say, permeates the whole of the society's proceedings, as evidenced by the fact that when a prize drawing was suggested the whole of the prizes were immediately contributed by the members then present. Our thanks are also due to the Press, who have brought our object before our fellow fanciers. The piloting of a society's affairs in troublous times is a most anxious one, and were the inner workings made apparent to the exhibitor (who has little or no knowledge of such matters) I feel sure that he would at times exercise a little more forbearance. I am not writing as a result entirely of my own experience, but also from reading of cases that have been made public which for all concerned had far better have been settled in camera.

He should have said "Ducks."

The Rev. W. McPheters, of Tekonsha, Michigan, has had to resign, says a daily contemporary, because he referred to the young women of the congregation as "a flock of cackling Parrots."

What is a Grizzle Crest?

At the annual meeting of the Scottish Crest Club a discussion took place as to what constitutes a grizzle crest, and the verdict was that a bird with a crest composed of a mixture of light and green feathers did not constitute a "grizzle crest." Further, a resolution was passed that all birds with any dark green feathers in the crest must compete in the class for Dark Crests.

A Twenty-year-old Canary.

The history of a Canary that must have been at the very least well up in his 21st year, is sent to a weekly contemporary by Colonel Mitford, of Old Town, Woodburn:—"One morning, in London, the little fellow flew through an open window into my children's nursery, without our ever being able to trace his origin. He appeared to be fully grown, and we kept him for over 20 years afterwards. He sang up to the last evening before his death. I remember at the time asking a bird dealer as to the limit of the age of Canaries, and he said he had never known one over 17 years, nor one that sung as mine had."

CLAUDE ST. JOHN'S
CANARY BREEDING
PRICE —FOR BEGINNERS.— SIXPENCE.
116 Pages. Many helpful illustrations
A thoroughly practical up-to-date Guide to the cult of Canary Breeding.
A Bulky and Valuable Volume.
Copies, post free, 7d. Cloth, post free 1/-
"Cage Birds," 154, Fleet St., London

Yorkshire Union Ballot Papers.

Kindly announce that the ballot papers in connection with the election of officers and revision of rules for 1908 have been posted. Any members not receiving one should apply to me at once.—FRED HAMMOND, hon. secretary, Yorkshire Union of O.S.

Green Canary Association.

A mistake was made in the points previously published in connection with the "Novice Yorkshire Green Section" in the season's specials, writes Mr. S. Hadwin, the secretary. The corrected figures are:—Cup, Deacon, 76; Vernon, 51; Tempest, 31. Cash Specials: Deacon, 159; Carswell, 117; Vernon, 82; Tempest, 55; Moss, 12.

Rule 17 and Specialist Clubs.

At the C.B.U. annual meeting last week, the secretary of the Norwich Plainhead Club, Mr. Raynes, stated that Rule 17 had operated adversely to the interests of his Specialist Society, and he asked the secretary of the Cinnamon Club, Mr. R. J. Pretty, whether he had experienced any ill-effects upon the membership roll from the same cause. The reply of the latter, however, was in the negative. This is another instance of the diversity of opinion concerning the effect of the "much-discussed."

HANDS ACROSS THE SEA,

The Victorian Canary Society (Australia) and the L. & P.O.S.

Many of the readers of CAGE BIRDS will recollect the visit to this country of Mr. F. White, of Australia, who came over to England purposely to see the 1907 Great National Show, and who contributed his impressions of this fixture and the Fancy generally to the columns of this journal. As an outcome of his visit, the cage-bird lovers of the "Old Country" and those of "down under" have been brought in closer touch, as the following extract from the Australian "Poultry and Kennel World," dated Jan. 3, 1908, bears witness :—

"After the judging of Canaries at the Victorian Canary Society's Y.S.S. was over on 28th November, a very interesting and unique ceremony took place. Mr. A. B. Mason referred to Mr. F. White's recent visit to the Old Country, and informed the members of a very graceful and generous act performed by him—viz., the presentation of four trophies of 10s. 6d. each to be competed for at the Crystal Palace Show, under the auspices of the London and Provincial Ornithological Society, handing them over in the name of the Victorian Canary Society. The speaker said he considered they owed Mr. White a deep debt of gratitude for this second act of generosity. Mr. W. Elliott seconded the remarks. Mr. White (who was received with hearty and sincere applause) admitted it was one of the proudest moments of his life; it had always been his aim in life to try and do everything a little better than "the other fellow." When in England he saw and envied the beautiful gold medals given for competition by the L. and P. O. Society, and now he had the great honour and pleasure (and here his voice vibrated with emotion) in informing the Victorian Canary Society that he held in his hand two of the coveted gold medals, sent to them for competition by Mr. Ramsden (secretary of the English Society). It was something to be proud of, and he felt it as a great honour to have been considered worthy to have been the medium of thus joining the Victorian Canary Society and the London and Provincial Ornithological Society (the leading society in England) in a bond of fellowship; he had held out the hand of friendship and fraternity on behalf of his Society, and the grip had been returned, and now cemented in this splendid manner. (Loud applause.) Mr. A. B. Mason moved that a hearty vote of thanks be tendered to the London and P. O. Society, through the kind agency of Mr. Ramsden, for so kindly sending them the two gold medals to be competed for. Messrs. Elliott, Coleman, Verey, etc., supported the motion, which was carried with great enthusiasm.

THE . . POULTRY . . WORLD
The up-to-date, efficient poultry journal. Every number grandly illustrated and full of practical articles by experts. Invaluable for the beginner and the amateur.

CLUB NOTICES.

One notice of any forthcoming Society meeting inserted free. It should reach us by Tuesday morning's post. Specially printed Club Notice Postcard may be had free on application to our Manager. Secretaries should always use them.

Attercliffe and Dist. C.B.S.—March 12, Horse and Jockey Hotel, 8. Table show of matched pairs and arrangements for concert.—W. Richinson.

Accrington and Dist. C.B.S.—March 12, headquarters, 8. Washing exhibition will be given by Mr. W. Dormer (Rishton). Cage bird fanciers cordially invited.—D. Harwood.

Bradford and County B.B. and M.C.—March 7, Market Tavern. Annual distribution of prizes; amalgamated concert and smoker with Y.C.C., C.M.C.C., and Y.U.—W. R. Myers.

British Roller C.C.—March 10, King's Arms Tavern, 128, Bishopsgate Street Without, S.E., 8. Important business.—J. W. Norris.

Bury and Dist. C.B.S.—March 10, Textile Hall, Bury, 7.30. Show for "pair birds." Judge, Rev. R. P. Hudson. Also other very important business.—F. E. Holden.

Bedlington Station and Dist. C.B.C.—March 14, Railway Hotel, 6. Election of officers and other important business.—J. Jobling.

Clitheroe and Dist. C.B.S.—March 7, Bennett's Tea Rooms, Moore Lane, 6.30. Lecture by T. Dent, on "Pairing and Breeding." Fanciers invited.—R. Lambert.

City of Wakefield O.S.—March 7, Crown and Anchor Hotel, 7. Members' show, Friday, Mar. 6, at 6 p.m. Judge, Mr. W. A. Cowgill (Gillington).—Parker and Atkinson.

City and Suburban A.C.B.—Mar. 9, Church Institute, 60, Paddington Street, Marylebone, W., 8.15. Lecture by Mr. J. Robson, "Breeding and Exhibiting." Visitors especially welcome.—V. Wynn.

Dysart C.B.S.—Mar. 7, Normand Hall, 7.30. Selection of judges, enrolment of new members.—J. Logan.

Dudley and Dist. C.B.S.—Mar. 11, 8.30. Rules, members' cards, and secretary's paper on "Cage Making, Decorating, Staining, Varnishing, and French Polishing and Recipes."—J. J. Mullett.

Darlington C. and B.B.F.A.—Mar. 11, George Hotel, 8. Business, date for open show, etc.—R. S. Black.

Eccleshill C.B.A.—Mar. 7, Fountain Inn, 8. Election of secretary and other important business.—W. Ashworth.

East Bowling and Dist. B.F.A.—Mar. 14, Barley Mow, 7. Business important.—J. E. Hudson.

Eastfield Side C.B.C. Sutton-in-Ashfield.—Mar. 7, new members specially invited.—J. Carlin.

Glasgow and West of Scotland N.M., B., and F.B.C.—Mar. 10, 112, Ingram Street, Glasgow, 8. Lecture on "Mules and Hybrids," by Mr. J. L. Burnett; show of British birds, classes, Linnet, Siskin, Twite, Redpoll, Bullfinch hen, A.O.V. Brit. hen.—R. A. Brown.

Grimsby and Dist. O.S.—Mar. 10, new headquarters, Hall of Science, Freeman Street, Grimsby, 7.30. General business and table show for British birds and Hybrid pairs.—Moore and Crowston.

Greenwich and Deptford C.B.S.—Mar. 12. Two Brewers, Church Street, Greenwich. Special business, 8; Committee, 7.30.

Great Harwood and Dist. C.B.S.—Mar. 9, headquarters, Town Gate, 7.30. Mr. D. Bentley, the well-known British bird judge, will give a lecture. Fanciers heartily invited.—G. Waddington.

Halifax O.S.—Mar. 7, Griffin Hotel, 8. Business important.—J. F. Thackray.

Hyde and Dist. C.B.S.—Mar. 9, St. George's School, 8. Business, table show, Brit., Mule or Hybrid. Judge, W. Booth. Paper by W. Shaw on "Norwich Plainhead."—T. Allsop.

Hartlepools C.B.S.—Mar. 11, Y.M.C.A. Rooms, Whitby Street, 8. Annual general meeting; very important business.—E. Woodhead.

Hamilton Cadzow Oak O.S.—Mar. 7, Royal Hotel, 7.30. Business of much importance.—R. Gadsden.

Inverness O.A.—Mar. 11, Crown Mission Hall, 8.15. Appointment of judges and other important business.—A. Urquhart.

Jarrow and Hebburn and Dist. C.B.F.S.—Mar. 11, Lockhart's Cafe, Ormond Street, Jarrow, 7.30. All intending members are asked to attend. South Shields members please note date.—J. T. Carrick.

Long Eaton and Dist. C.B.S.—Mar. 14, Co-operative Room, 6.30. Monthly meeting; important business. Fanciers residing within five miles invited to join.—E. Barker.

Leeds Roller C.C.—Mar. 7, Lockhart's, 55, Briggate, (corner of Commercial Street), 7.30. Important business. Hearty invitation to all Roller fanciers.—C. Towes.

Leicester C.B.S.—Mar. 11, headquarters, Hare and Pheasant Hotel, High Street, 8.15. Table shows, Goldfinch and Bullfinch, Bramblefinch, Greenfinch and Chaffinch. Any variety part-seed eating British bird. Judge, Mr. Judd.—J. A. Tyler.

Leigh and Dist. C.B.S.—Mar. 10, Railway Hotel, 7.30. To fix date and judge for Annual First Feather Show.—R. H. Davies.

Loanhead and Dist. C.B.S.—Mar. 14, Volunteer Hall, Loanhead, 7. Enrolment of members. Booking hens, consideration of medals, etc. Fanciers inside 10 miles radius invited.—W. B. Smart.

Leith O.S.—Mar. 14, Liberal Club, Hope Street, 7.30. Classifications, etc.—G. Brown.

Leeds C.B.S.—Mar 7, Lockhart's Cafe, 7.30. Table show of Yorks, Nor. and Brit. Four open classes and six novice. Judges, Messrs. King and Chew. Election of judges for open show. Fanciers invited.—Wilkins and Ireland.

Llanelly and Dist. C.B.S.—Mar. 7, Bird-in-Hand, 7.30.—J. Simon.

Metropolitan C.B.A.—Mar. 12, Crown Hotel, Lavender Hill, S.W., 8.15. Important business.—A. J. Head.

Middlesbrough and Tees Side C.B.S.—Mar. 14, Crown Hotel, 7.30. General meeting, election of officers.—A. Wake.

Manningham C.B.A.—Mar. 7, Mowbray Arms, 7.15. Lantern lecture on "British Birds." A hearty invitation to all fanciers and friends.—F. Western.

Musselburgh O.S.—Mar. 14, McDonald's Rooms. Committee meeting, drafting rules, etc., 7 p.m.—D. Kay.

Nottingham P.O.S.—Mar. 14, Shoulder of Mutton, 8. Special meeting, business urgent.—H. Davis.

North Manchester C.B.S.—Mar. 10, Christ Church Schools, 8. Table show for pairs, Yorks and Nor. Members please make entries. Entry fee 3d. per pair.—J. Davey.

Oldham and Dist. C.B.S.—Mar. 10, Textile Dining Rooms, 8. Important business.—F. Steeple.

Pendleton and Salford O.S.—Mar. 9, Chapel Street, Congregational Hall, 8. Table show for York., and Nor. Silver medal for most points. Mr. Sam Cool will judge. Entry 6d., on the 6d. sliding scale.—W. Jackson.

Rochdale O.C.—Mar. 9, Club-rooms, Brook Street, 8. Special meeting; important to members.—J. Butterworth.

Stockport B.F.A.—Mar. 10, Boar's Head Hotel, 8. Special business, C.B.U. and syllabus for current year.—W. Stafford.

Stoke Newington F.A.—Mar. 10, headquarters, 8. Payment of prize money won at match pair show.—G. Dowden.

St. Helen's O.S.—Mar. 9, George Inn, Water Street. Election of officers and other important business.—T. Vose.

Sale Open O.S.—March 9, Sale Hotel, 7.45. Table Show, Brit. Judge and lecturer Geo. Massey (Stockport).—G. F. Hardcastle.

South London Col. and F.A.—Mar. 12, Royal George, Lewisham High Road, S.E., 8.30. Auditors' report and discussion as to club's affiliation.—G. A. Jefferys.

South West London C.B.S.—Plough Hotel, 8.30. Special meeting. Acceptance of balance sheet, and to settle protest as to eligibility of a certain exhibitor showing in the novice and amateur section.—Lilley.

Swansea and Dist. C.B.A.—Mar. 12, Market Coffee Tavern, 7.30. Election of judges for open show and other important business.—A. Hitchings.

Scottish B.B. and M.C. Mar. 7, 142, High Street, Edinburgh, 4. Annual general meeting; presentation of medals, elections, etc.—R. Farmer.

Walkeley and Sheffield March 14, White Horse Inn, Creswick Street, Walkley. Table show; pairs matched for breeding, Canaries, Mule or Hyb. Judge, Mr. W. Oxley (Sheffield). Open 4 to 8. Fanciers invited.—C. W. Marshall.

Windhill, Shipley, and Dist. O.S.—Mar. 14, instead of Mar. 7, 8. Business important.—E. Broadley.

Wandsworth and Dist. F.S.—Mar. 12, headquarters, Ye Old Swan, High Street. Annual general meeting and presentation of balance-sheet.—W. Summers.

Wolverhampton and Dist. C.B.S.—Mar. 10, Prince Albert Hotel, 8. Balance-sheet, members' show, and other important business.—F. Howes.

Wibsey C.B.S.—Mar. 7, Horse and Groom Inn, 7. Mr. F. Allen will give his lecture on the "Yorkshire Canary." Fanciers and friends cordially invited.—E. W. Johnson.

Wigan and Dist. C.B.S.—Mar. 7, Adelphi Inn, 8.—W. Ridge.

Wombwell, Darfield and Dis. C.B.S.—Mar. 7, Royal Oak Hotel, Church Street, 6.30. Lecture on "Canary Breeding and Green Blood," by Mr. H. Taylor (Sheffield).—J. Bill.

York C.B.S.—Mar. 9, All Saints' Schoolroom, 8. Monthly meeting. Debate on breeding and rearing of cage birds, and other business.—A. Wand.

SHOW DATES FIXED.

To secure insertion in this column a guarantee that the show will be advertised in "C.B." to the extent of at least 25/- must be sent to our manager.

* Under the Rules of the C.B. Union.

Oct. 2 and 3.—**Burnley and Dis. C.B.S.**
Oct. 7 and 8.—**Peterboro' C.B.A.**
Oct. 8 and 9.—**Watford & Dis. C.B.S.**
Oct. 9 and 10.—**Great Harwood & Dis. C.B.S.**

PRIZE MONEY PAID.

Dudley.

Use our Picture Postcards

QUESTIONS & ANSWERS

DOUBTS AND DIFFICULTIES SOLVED BY SPECIALISTS.

(1)—All questions must be clearly written in ink (or typewritten) on one side only of paper, and must conclude with either the correct name of querist, or a pseudonym, or initials.

(2)—The proper name and address in full of querist must always be written on a separate sheet of paper and enclosed with the query. In no case must the address appear on the query.

(3)—Queries intended for different specialists must not be written on the same sheet of paper.

*(4)—**Queries must not include** orders for books, instructions re advertisements, or any other matter for publication.*

(5)—The department to which the queries refer must be stated in bold letters on the left-hand corner of the query.

*(6)—If an answer in the same week's issue is desired, queries must be posted to reach us by **Monday's first post** at latest. Queries will be dealt with in the order in which they are received, and only as space permits. The earlier queries are received the better attention they are likely to have.*

(7)—Queries relating to illnesses of birds, except enquiries as to cause of death (for which see Post Mortems) will be answered by return of post on receipt of a postal order for sixpence and an addressed stamped envelope. Queries of an ordinary nature will be answered by post, if desired, on receipt of a postal order for one shilling and a stamped addressed envelope.

(8)—All who require letters of complaint written to advertisers must state grounds for doing so clearly and fully, and enclose a fee of sixpence to pay postage expenses, &c., otherwise their letters will not receive attention.

(9)—All queries must be addressed the **Editor**, **"Cage Birds,"** 154, *Fleet Street, London, E.C. Only queries so sent will be answered. Postcards are not admissible.*

Queries will be answered under the following conditions:—

NOTE.—Readers are requested to carefully study past numbers and current issue before submitting questions. By doing so they may save trouble and unnecessary repetition.

THE following gentlemen represent CAGE BIRDS staff of **ADVISORY EXPERTS.** Queries must in no case be addressed to any of them individually, but to the Editor.

Canaries.—**Claude St. John.** British Birds, Mules and Hybrids—**G. E. Weston.** Foreign Birds—**Wesley T. Page,** F.Z.S., M.B.N.H.S., &c., Parks and Lake Avieulture—**Frank Finn,** B.A., F.Z.S. M.B.O.U., &c. Wild Bird Life—**H. Norman.**

NOTE.—If an answer is required concerning the proper mating, etc. of Norwich, Yorkshires, Crests, Cinnamons, Greens, Borders, Lizards, Scotch or any other variety of the Canary family, we shall, should the querist desire us to do so, be pleased to submit his question for answer to some leading specialist of the day on the variety concerned.

CANARY QUERIES.

Answered by CLAUDE ST. JOHN.

Feeding up Birds.

"Novice."—I have an idea this subject was dealt with on the Novices' page three or four weeks ago. Look up a few back numbers. You should commence at once to give the cocks a teaspoonful of egg food twice a week, and a small leaf of dandelion every second day. Twice a week will be often enough to give mixed seed. In a fortnight hence, if the cocks do not appear to be coming forward fast enough, give a leaf of dandelion daily. The hens should be given a pinch of inga twice a week, a teaspoonful of egg food once a week, and a spray of watercress every second day. In a fortnight, if you wish to hasten them on, you may begin giving them a leaf of dandelion also, the same as the cock.

Pulling out Feathers.

First Year.—My first thought was that your bird was troubled with insects, and this suspicion, on a second perusal of your letter, seems confirmed by the fact that the hen left off the habit for a time after you washed her. As you are able to do the washing, I would advise you to give this bird another wash, and add a teaspoonful of spirits of camphor to the first and second water, and then, whilst the bird is drying, give its cage and the place where it hangs, a thorough clean. Wash out the cage with a fairly strong solution of Izal, or some similar disinfectant; or paint it all over inside and out with the mite destroyer mentioned in reply to "Camphor" on February 22nd, and afterwards redistemper and varnish. Your feeding seems all right, but you should begin to give a spray of watercress instead of apple now. You might also give her a little Epsom salts, and five or six drops of lemon juice in the water for a day or two, and afterwards fifteen drops of chemical food twice a week for a fortnight.

Two Old Friends.

Constant Reader.—(1) It is interesting to learn that the former supposition as regards overfeeding is probably correct. Continue to feed and treat as already advised—limiting the quantity of seed given, but allowing green food and soft fruits ad. lib.—with this exception, that instead of giving sulphate of soda, give as much Epsom salts as will cover a sixpence, and ten drops of whisky in water one day, ten drops of syrup of buckthorn the next day, and pure water on the third day. Repeat this again and again for two or three weeks, or until the bird is sufficiently reduced in substance, and every seventh day give six drops of aromatic sulphuric acid. I would not advise you to mate the bird until it has got rid of all this superfluous fat. (2) It was undoubtedly the change to your room which caused the Cinnamon to start moulting. You cannot do much better than you say you have begun to do. Continue the chemical food every second day, and on intervening days give a crumb of sponge cake with three or four drops of sherry on it. Do not give egg food in addition. This should stop the feathers dropping quite soon enough to breed with it. Do not, however, mate the bird until a week or two after the moulting has ceased. Certainly you should not attempt to "sweat" the bird, as you term it.

Three Questions.

"Constant Reader."—(1) The sample of Canary seed is decidedly small, with a small proportion of fair sized grains, and as it is also uneven in colour, I should say it was mixed. Still, it is very sweet and good, and the only point on which one might wish for improvement is in size. The rape is a very nice sample. (2) It is impossible to say what the Roller cock died of, which was quite well and singing in the morning, and was found dead in cage at night. If any more similar deaths have occurred since, I should suspect septic fever, and strongly advise you to have a post mortem on one of the birds to ascertain the fact. By the way, the bird should not have been paired up yet. (3) You would probably get better results in breeding songsters by mating a Roller cock with a Yorkshire hen than vice versa. But whichever way you mate, the actual result will be influenced to some extent by the nature of the tuition the young birds get. To obtain the best results, they should not be allowed to hear anything but good Roller cocks singing.

Cocks or Hens?

Puzzled, Stourbridge.—The birds are in all probability both hens, and you have doubtless been feeding them too generously for the position in which they are kept to cause them to set up a common nest and lay. Even if they had been a true pair, you should not have kept them together in the same cage. The end of the present moult would have been quite early enough to put them together, and then only in case the cock had been in full song. If you wish to test the value of these eggs allow the birds to go on sitting on them until the fifteenth day, then if they still remain eggs, throw them out, take away all nesting material, and a fortnight later procure a genuine cock bird, in song, to mate with either one or both of them.

Not Singing.

M. Picton, Rhondda Valley.—The fact that the bird is not a young one is probably the explanation of its not yet singing. Many birds as they leave their youth behind them gradually defer their vocal efforts until finally they do not recommence singing until spring is no longer a "delusion and a snare." However, you will do no harm in trying the effect of giving twenty drops of chemical food and twenty drops of whisky in its drinking water every second day for a fortnight or so.

Over-feeding.

W.B.—I think this is all your bird suffers from, as your feeding is too generous for a caged Canary. Treat as follows for two or three weeks. For staple diet give plain Canary seed only; once a week give a small piece of bread, dipped in milk and pressed nearly dry, and once a week give just a small pinch of the mixed seed you mention. Give green food, or soft, juicy fruits—such as grape or orange—ad. lib., and every second day add five drops of syrup of buckthorn to its drinking water. At the end and in the middle of each week, give a dose of twenty drops of whisky and ten of glycerine in the water in addition to the above.

Ebb and Flow.

I.R.—Sorry to hear the sib-bred bird went ill again after discontinuing the treatment which did him so much good. You were right to begin the same treatment again. Go on with it until a week or two after the bird seems to be quite well, except that you may drop it off for a few days, in order to give the bird a rest, it you should have to continue treatment very long. Say you give treatment continuously for a fortnight, then stop it for three days, begin again and go on for a week; then stop for another three days, and continue in this way for at least a fortnight after the bird seems to be quite recovered. Glad to hear your friend's bird is also much better.

Won't Pair.

R.P.—He's a sensible bird R.P., is this Norwich-Yorks cock who refuses to pair up. Perhaps if you try him at the end of this month, which will be a much more reasonable time than the present, he may be more disposed to fall in with your way of thinking. Instead of trying to mate the bird now, begin to feed him up as advised to "Novice" in this issue, and you will succeed far better in your efforts at mating in three or four weeks hence. Perhaps he was not in the best of condition last year when he failed to fill eggs; or, maybe, he required a little trimming, as was described on the "Notebook" page a fortnight ago.

Mating with Two Hens.

Novice No. 2.—In mating one cock with two hens in a double-breeding cage, you should put in the solid partition, and allow the cock to run with one hen only until she has commenced to sit, and then remove him, and run him with the other hen. When the second hen has begun to sit, it would be best to remove the cock, and cage him by himself until the first hen is again ready to mate. In breeding Mules in the same way, you would find it more convenient to reserve a double breeder for each hen, as in this case it is advisable to shut off the Finch from the hen each night when she is about to lay, until the egg has been removed in the morning. Otherwise the egg may meet with an accident.

Feeding Roller in Song.

St. Andrew.—Assuming the Roller to be in good health to start with, the proper feeding, which you ask for as another question, is the key to keeping a Roller in good singing condition. Given a healthy bird, properly fed and treated, and a male, it must sing—it could scarcely help itself. As these birds are practically always kept in small cages, and mostly in comfortable living rooms, the simpler they are fed the better. As a staple diet a mixture of two parts Canary and one part summer rape should be given. All other oily and fattening seeds are best avoided, except on very special occasions, when a few grains of hemp might be given as a treat. A small piece of bread sopped in milk once in one week, and a small teaspoonful of egg food once in the following week, and a spray of either watercress, chickweed or groundsel daily, is all that need be added to complete a useful and wholesome dietary. Plenty of grit should be kept in cage, a comfortable, but not overheated, temperature should be maintained, chills and draughts strictly avoided, and a daily bath offered in mild weather. A tepid bath should be given twice a week when weather is cold. If the bird shows any sign of hoarseness or difficulty in getting through its song, at once give it twenty drops of whisky and ten of glycerine in its water for two days, before the voice is seriously affected. With this treatment a Roller should keep at its best for singing all through the year.

A Case of Asthma.

W.T.B.—This is what troubles your bird, and it has doubtless been exposed to a draught, or had a severe chill in some way. Keep it fairly warm, and strictly avoid draughts, also great variation in temperature. In the drinking water give 20 drops of whisky, 10 of glycerine, and six of oxymel of squills every day for the first three days, and afterwards every second day until better. Give the bath only during bright weather, and not at all until there is some improvement. Give a spray of watercress daily instead of apple.

Cold and Moulting.

"Avis."—Removing the bird from a warm kitchen to a cold room has caused the trouble. Keep her now where you have moved her to, but do not keep her too warm; so long as the heat is regular that is all you want. See that she is not troubled with insects at night. You can discover this when she seems very restless after retiring to roost, and being covered over an hour or two by taking off the cover and examining perches, cage, and the inner surface of the cover carefully. For the cold and moulting give a small piece of sponge cake slightly moistened with sherry every third day for a fortnight if necessary, and on each of the two intervening days give twenty drops of chemical food in the water.

Brevities.

Mating and Situation (Electric).—You must keep the wire division between the birds until you notice the cocks calling the hens to the wires and feeding them. 2. Between the window and the dresser, on the same wall as the window is in, would do for your cage to hang.

Still Husky (Phyllis Yaldwin).—It is, I should say, undoubtedly a hen, and the husky voice is the natural one. Stop the bread and milk, also the medicine, and give plenty of greed food, and once or twice a week for awhile give it as much Epsom Salts in the drinking water as will cover a sixpence.

Sawdust or Sand (Ut prosine).—It is much better to use sand for the bottom of cages during the breeding season. That sold in penny bags, if clean, and containing a fair proportion of gritty particles, is quite suitable. Some samples are very fine and dusty; avoid these. 2. The best sawdust, when using the material, is a coarse cut pine sawdust. Its odour helps to keep a room nice and sweet.

A Low Call (Smith).—Feed and treat the hen as advised to "W.B." for overfeeding in this issue, and instead of the mixed seed mentioned in that reply give her a small pinch of inga twice a week. 2. Give the hen whose droppings are very wet a pinch of hemp seed daily until better.

Wheezy and Husky (A.M.). — See reply to "W.T.B.," in this issue, and treat the birds as there advertised. Also give a small piece of sponge cake as advised to "Avis," twice a week, instead of egg food, for a fortnight. As soon as the colds are better, you may discontinue this, and give 15 drops of Chemical Food every second day for a week. You may be rather overfeeding the birds. See replies on this subject also.

BRITISH BIRDS, MULES AND HYBRIDS.

Answered by G. E. WESTON.

Canary Partner for Bullie Hen.

A. W. Anderton.—Generally speaking, I am against the employment of crest-bred Canaries for mule breeding. But I make exceptions in favour of certain birds. I have used myself, for instance (and probably shall use again) short-feathered yellow Crest-bred hens. But I have seen some wretchedly loose feathered mules bred from Crest-bred hens—generally big, heavy-feathered buffs. It is all very well to get size of frame, but even that is useless when combined with slack plumage. If you got a large yellow Crest-bred cock, not over weighted with feather on head and at thighs, you might venture on mating him with one of your Siberian Bullfinch hens. A big-framed yellow Lancashire, or, better still, a big variegated yellow Norwich cock, would make a grand mate for the hen. The second hen I should most certainly pair to a jonque Cinnamon cock, the largest you can find. You will find it best to go on the "one cock, one hen" system, and leave the pair together through the season, "for better or for worse." I hope to put up a big Cinnamon with one of my own Siberian hens this spring.

Chaffinch-Canary Mules.

Lady Novice.—This is a question with which I have often been called upon to deal. 1. Any hen Canary would do, really, the main point being to get the cock Chaffinch attached to her. With your very tame bird this is not likely to be difficult, providing you do not thrust her upon him too suddenly. Let him inspect and get to know her well, before running them together. If you have to buy a hen, then a heavily marked yellow of Norwich type, would be as good as any other. 2. To say whether the "probability of getting youngsters is very remote," is rather too much for me. It is said young Chaffinch-Canary Mules have been hatched more than once (a Chaffinch-Greenfinch has even been recorded), but no accepted example of the cross has been seen on the show bench, so far as my own memory goes. Don't be discouraged, however; the greater the honour if you succeed. 3, An "ordinary" breeding cage is rarely large enough. One 36 by 20 by 14 inches is the smallest you should try. 4, It would depend entirely upon how the cock behaved, but you would be on the safe side in removing him while the hen was sitting and rearing the brood (if any), in the same way as with the cock Goldfinch. 5, The young Mules would most certainly be of value. A male example of the cross, which showed the parentage well, would be of very considerable value. Go ahead and produce it.

Getting Cock Greenfinch into Condition.

Reader of "C.B."—The cock Greenfinch is hardly likely to come into breeding condition until we have experienced a spell of sunny, spring-like weather. A house-moulted one kept in a warm room and fed on much stimulating seed might, of course, do so. The following is the stock mixture you should use: Canary and teazle three parts each, white sunflower and safflower one part each, summer rape, charlock and linseed half-part each, by measure. Also use the following, (1) hemp two parts, niger and maw one part each, (2) a good wild seed mixture, to which has been added a dash of thistle and dandelion. Give a small teaspoonful of these on alternate days. A very important point is that you should look out for the young dandelion leaves, and gather a daily feed; also for seeding chickweed (obtainable practically all the year round in suitable sheltered spots), shepherd's purse and groundsel. These spring "salads" are invaluable aids in bringing all the Finches into proper breeding trim—especially the flowering and seeding dandelion heads. The earlier you get the latter, the better your chances.

Breeding Britishers in Cages.

A Bird Lover.—I can quite believe you and your brother are novices in the art of bird breeding, otherwise you would hardly set out to breed British birds in a cage 17 by 16 by 9½ inches. It is very difficult indeed to breed British birds in cages of difficult indeed to breed British birds in cages of difficult indeed to breed British birds in a tiny cage (none too any kind; doubly difficult in a tiny cage (none too big for a single bird), like yours. No British birds are "good breeders" in cages, though several species (Goldfinches, Greenfinches, Linnets, Redpolls, Siskins, and even Chaffinches) have been so bred. Your cage should be at least 36 by 20 by 16 inches, and in it you might try a steady couple of either of the five first-named species. You would need to give them the usual seeds advised to their kind (note other replies) and a liberal daily supply of all the wild seeding plants recommended, as in season; also a few soaked ants' eggs, or a little of a first-class insectivorous mixture if the birds will eat it. I may say that hen British birds will often lay eggs in a cage, and frequently build, but they do not often sit out the period of incubation, and, even when they do this, they rarely bring their young to maturity. Why not get a suitable cage, and a mating couple? From a steady Linnet and a young hen Canary you would be almost certain to breed something, and you can fly at higher game when you have had a little experience.

Several Matters.

Nimrod.—The mixture you send a sample of is "good enough," so far as that goes, and quite suitable for use. But you must find it wasteful, surely, as British birds don't care about millet at all, and Goldfinches very, very seldom touch a grain of rape. I am constantly recommending stock mixtures for Linnets and Goldies; note other replies in this and last week's issues. If your Goldfinch is of an "unkind" disposition, he may not get properly steady until after the moult. Hang him breast high, in a box-pattern stock cage, in a room where people are constantly on the move. Both birds ought to come into song as soon as they settle down to "domesticated" existence. Some birds will sing within a few days of capture; others take a long period. Everything depends on the disposition of the individual bird. Why you are dosing the birds alternately with taraxacum and saffron goodness only knows; healthy birds don't require swilling out with drugs every day.

Mule Breeding.

T.N.—You will most likely succeed with the Linnet-Canary couple in the 20-in. breeder. But this is not long enough; in my opinion. I am a stickler for roomy breeding cages, and know from experience they are far and away the best. It is the craze for cheapness that has brought the absurdly small "breeders" we read about; a cage which is only cheap because of its very small size, is in reality very dear indeed to any fancier, and the sooner the young fancier realises this, the better it will be for him. My minimum length for a single muling cage is 24 inches, and 30 inches is a much better size. The yellow Norwich hen, "twice highly commended," should be a grand mate for the twice house-moulted Linnet; you could not get a better kind. You must feed the couple on the lines laid down in the reply to "Newcastle" last week. When the Linuet is in stout song, and his beak has turned a distinct deep slate-blue colour, you will know he is quite fit for breeding purposes. The hen, when ready, will be noticed bouncing vigorously from perch to perch, flapping her wings, and frequently calling in a shrill voice. Give her a little wool, nesting moss, or even a little teazed-out string, and she will carry it about in her beak, and be looking all over the cage for something to pop it in so as to commence to nest. When you see these signs, you can start your hen off with confidence. You need not trouble to put the cock Linnet with the hen until she lets you know she is ready; but let him hang close by, within sight of her. Should he "sing at her," with wings down and heaving throat and chest, you can shake hands with yourself, and almost venture to ignore the old proverb about counting your chickens before they are hatched.

A Light Mule Problem.

Light Mule.—The breeding of light Mules is always something of a problem. The theory of mating cock Canary to hen Finch is by no means a new one. I tried it for several seasons many years ago, but am bound to admit that the results, so far as light feathers were concerned, were exceedingly disappointing. I gave it up, in fact. If, as you say, "the cock throws the light colour," what is the use of fanciers toiling to establish strains of sib-bred hens? It is an absolute and uncontrovertible fact that many grand light Mules, including clears, are bred by pure chance; no one could say why the hens produced them. To get back to your question, however, it is a fact (as perhaps you know) that a very light Siskin Mule (a great rarity) was bred last season by the mating of a cock Canary to a hen Siskin. And, curiously enough, two more were bred from a Border Fancy hen, I believe, by pure chance. I think you would be quite correct in using a sib-bred cock Canary, if you have a genuine sib-bred one. The hen Britishers likely to pay you best to experiment with, would be Greenfinch, Siskin, Linnet, Twite, or Redpoll—I think I should take them in order given. In any case, the eggs should be put under Canary foster-mothers.

Stock Mixture for Linnets.

J.T.S.—Your stock mixture is certainly not one I should myself use for Linnets (or any other British seedeaters). It contains far too great a percentage of canary seed, for which few British birds have any great liking; therefore it would only be wasted, following: t'anary six parts, teazle four parts, summer rape, charlock and linseed two parts each. In the summer, however, reduce the linseed to one part; and during the moult add two parts of hemp. At other times hemp should only be occasionally given. Thistle seed can be given now and again as a treat; likewise maw, niger, lettuce, gold of pleasure, wild seed mixture, etc. "Ketlock" is only another name for charlock, and this is advertised largely in our columns.

Linnets, Greenfinches, etc.

New Reader.—It is always very difficult to describe show birds briefly so that a novice may grasp the points required. You would be well advised to visit a good show (are there no societies holding Finch shows near you, or members British bird shows?). You would then have no difficulty in getting a good idea into your "mind's eye" of the points of the exhibition Linnet and Greenfinch. Size and shape are very important, and these points one cannot adequately convey in writing. Both birds need to be as large as possible, consistent with colour and quality. The Linuet should be a rich, warm, nutty-brown colour generally, show plenty of white in the outer wing and tail feathers, be well pencilled (streaked with dark lines) on the breast and flanks, and in a lesser degree on back and head, and be as sound in colour as possible all over (that is, show no white break down centre of breast or at throat). The Greenfinch should be pure, rich grass green in colour generally (if with a suspicion of yellow in it so much the better), and carry a wealth of rich gold in the outer wing and tail feathers. Its coat should shine like glass ("shimmer with bloom," as the reporters put it). Of course, a buff Greenfinch cannot carry the richness of colour found in a jonque; and this applies to the Linnet. If you took out the Chaffinches and Bramblefinches you might breed in your small aviary by turning in a few Bullie hens. There should be no other hens in it.

A Variety.

Itys.—1, Tender, cooked beetroot (mashed) is good to occasionally mix with the food of softbills. But I have found shy feeders look askance at it, no doubt on account of the colour. 2, I do not know whether it is possible to rear silkworms. They certainly would not be injurious; on the contrary, they are well liked. Occasionally they may be bought from advertisers in our columns. 3, The black mark usually disappears from the beak of all Goldfinches once full breeding condition is attained. It is quite wrong, however, to think a Goldfinch will not fertilise eggs so long as any black is to be seen. 4, You are quite right—the distinction of buff and yellow runs through all the Finch family. Jonquies, other things being equal, will always beat buffs on the show-bench. They carry feather of silkier quality, in addition to the better colour.

Brevities.

Sexing Goldfinch Mules (T. Morris).—The only way for any novice (as you say you are) to sex Goldfinch Mules is to hear them sing. Only experience with them can help you tell the cock from hen by their outward appearance; and even "experienced" hands find the sexing not easy at times. The cock is nearly always brighter in colour all over than the hen, has a more expansive and richer-coloured blaze (the colour round the "face"), has a longer, flatter head (viewed sideways), and is much sprightlier in action, and has a more ringing call-note.

Mule "Sucking His Feathers" (H.M.).—Am afraid I overlooked your query. The only explanation that occurs to me is that red-mite are present in the cage. Get the ANNUAL and read the information there on parasites. Spray him daily with water made bitter by allowing a few quassia chips to soak therein, keeping him out of draughts until dry. But the cage must be thoroughly cleansed.

Starlings Dying (H.D.).—You should get young Starlings, either just after they leave the nest, or, better still, just before they do so, finishing their rearing by hand-feeding. Many old birds "sulk" when caught, and die, or prove very difficult to get on food and steady. The latter should be given their liberty; they are not worth bothering with.

Identity of Birds, etc. (H.E.P.).—The bird you have is certainly not a Chaffinch—the yellow tinged beak proves that, while the lower back (or rump) of the latter is greenish, not white. It is a Bramble-finch, I feel absolutely certain. The only hybrid I know of with this bird is that with the Chaffinch as the other partner. If you are content to experiment between it and the Greenfinch, by all means do so. Feed both exactly as advised "Reader of C.B." this week.

Canary "Mad to Nest" (E.B.).—When a hen Canary gets so far as to pluck out her own feathers to build the nest with, it is worse than useless to try and keep her back from nesting. Let your bird go ahead. The eggs may be infertile, but let her sit out her time, and then the Linnet should be in trim ready for the second hatch. For method of feeding, see reply to "Newcastle" last week.

Cage for Linnet (Young Novice).—The best pattern for the stock cage of a Linnet (or any other Finch) is that now universally known as the Finch stock cage. Any up-to-date cage-maker will supply it. An illustration appeared in the ANNUAL for 1906. It is about 16 by 10 by 8 inches, wired in front only, with doors in front and at one end, seed-troughs running from front to back, two perches on a level with top of seed trough, water-hole in front, wired ½-inch.

Roller Hen (Silliw).—Yes, you can breed good singing Mules from a Roller hen and either cock Goldfinch or Linnet. I have often had a nest from the Roller hens I have been using as "foster-mothers."

Goldfinch-Canary Mule (Un Jeune Homme).—1: A Mule three years old is quite une jeune oiseau, and ought to be only at the beginning of its best as a show bird. Age (barring absolute decrepitude) tells but little against a good show Mule. 2: Colour-feeding should start about the middle of July; earlier if any sign of feathers being cast. 3: Consult advertising columns for suitable colour-food; against the rules to recommend any special brand. For method, you should read a good Canary manual (House's or Claude St. John's).

Linnet Mule Breeding (A.B.C.).—The cage you mention is fairly suitable, though an inch or so of extra length would be an advantage. The bedroom ought to be quite suitable to keep it in. For treatment, see reply to "Newcastle" last week (no doubt you noted this). Leave the cock Linnet with the hen by all means, if he behaves himself, right through the season.

Thrush always Moulting (W. W. G.). — I should think you must be keeping the bird in a draughty, unsuitable place; probably in an unsuitable cage, open both at sides as well as front. Your feeding is not good, either; see reply to 'S. B. E." last week. Keep the bird in an equable, warm atmosphere, and mix 7 or 8 drops of Parrish's Chemical Food (from the chemist), amongst its food every day for three weeks. Thrushes are very hardy when properly housed, kept and fed.

Greenfinch-Chaffinch Hybrid (W. Jeffrey).—I note your remarks with pleasure. Now you mention it, I remember the note appearing concerning the hatching of Greenfinch-Chaffinch Hybrid. I sincerely hope you may breed another, and rear it, too. I never "discourage" anyone from trying any cross (within reason, of course). Go ahead and experiment is always my advice.

Wild Seed Samples (J.G.M.).—As I thought, when I first looked at your specimens, No. 1 turns out to be radish seed, and No. 3, cress. No. 2 puzzled me, but the expert friend I submitted the trio to, tells me it appears to be either onion or leek seed. Nos. 1 and 2 I have never knowingly given to birds of mine, but No. 3 I have occasionally used in small quantity, though I attach no particular importance to it. A fancier friend recently told me he had heard of it as good for moulting Goldfinches.

FOREIGN BIRDS.

Answered by WESLEY T. PAGE, F.Z.S., M.B.N.H.S.

Canaries and African Birds.

E.H.A.—I frankly confess that I do not know what a Cape Sascy is. Can you give any other name for it, as this is possibly some vernacular name for quite a common bird which I have failed to note? I may say that almost any of the African Serins would make a suitable cross for a Canary, and their progeny should prove very sweet singers, and possess about the same value as other crosses of this kind (*i.e.*, Canary crosses generally). Let the hen be the Canary, and use a double breeding cage for each pair. All the African Serins are charming cage or aviary birds, though rather quarrelsome if two species be kept together in a confined space.

A Needed Change of Diet.

E.W.—The diet you are giving the bird is simply awful; the marvel is that it still lives. Stop all the messes you have been giving, and diet strictly as follows: You had better give a little boiled maize at first, but as soon as it is eating heartily of its other food, gradually discontinue the maize (note, the maize only keeps fresh one day). Get one quart each of canary and oats, and one pint each of hemp, sunflower, wheat and dari, well mix and always keep a supply in the cage. Give, in addition, ripe fruit, plain biscuit (dry), nuts (shelled walnuts are best); keep a piece of clean cuttlefish in the cage, and permit it to satisfy its thirst three times a day, with water that has been well coloured with Parrish's Chemical Food. For one day only soak one teaspoonful of Dinneford's Magnesia into a piece of biscuit, or bread, and see that the bird eats it; after an interval of three days repeat the dose. Do not give any tea, coffee, or milk slops, or any kind of animal food whatever.

Breeding Cordon Bleus.

W.H.K.—Keep them as they are till end of March, then put them into a double breeding cage, remove all the fittings, and at either end fix a nest box, screening same with twiggy branches (heather sprays answer excellently); put in each box half a Canary nest bag, and keep some hay or dried grass in one corner of cage. This is all you can do, and you must leave the rest to luck. It is really of no use trying to breed with more than one pair in a cage. Get a pound each of best ants' eggs and dried flies, and mix them together; these will keep indefinitely. To an equal bulk of these add crumbled sponge cake and slightly moisten same. The Canary, millet, spray millet, greenly, grass in flower, with the soft food named above will be ample. Note, you need not alter your diet till end of March, when you put them up for breeding. Keep them out of draught, and the temperature of any ordinary living-room will be ample. They should breed, if at all, during the summer, or early autumn.

Cockatoo with Cold?

Blackman.—You have either the Greater or Lesser Sulphur-crested Cockatoo. Soak one teaspoonful of Dinneford's Magnesia into a piece of plain biscuit, stale crust of household bread, or anything similar that will absorb it, and that the bird will eat; repeat this three times with an interval of two days between each occasion. Get from your chemist the following mixture: Oxymel of squills, ipecacuanha wine and glycerine in equal parts. For use take one teaspoonful of the mixture to two tablespoonsful of water, and let it have only this to drink till the cold yields, giving it, of course, a daily fresh supply. The seed mixture should consist of equal parts of oats, canary, wheat, dari, maize, hemp and sunflower seeds; to vary the diet give ripe fruit, plain biscuit, nuts, a little boiled potato (dry), green-food, and cuttlefish. Do not give tea, coffee or milk slops or any kind of animal food. Most individuals speak a few words; yours should do so if taught. See other replies in this issue.

Breeding Indian Rock Parrakeets.

J.B.—An outdoor aviary would be the best to attempt to breed them: it should consist of a shelter shed and flight. Of course, for such birds all woodwork should be covered with wire-netting, or they will eat their way out. For a minimum size, say 6 ft. flight and a 3 ft. shed. Or they would probably breed if you got a strong wood box, about 5 ft. by 1½, or 2 ft. by 2 ft. high. Put a nest box with concave bottom at one end; they require no nesting material. The front only should be covered with wire-netting, and the roof make water-tight. Seed mixture: Canary and oats, two parts each, and one part each wheat, dari, hemp, and sunflower seeds; this will be their staple diet. Supply the same extras as advised to "Blackman" in this issue. The hen bird should have one or two doses of Dinneford's Magnesia—say, one teaspoonful in the drinking water (two tablespoonsful) every other day for a week. If this does not give relief repeat query with full details.

Breeding Budgerigars in Cage.

Glasgow.—Yes, you should succeed in breeding Budgerigars in your cage; hang up a husk at either end and put in several perches of natural wood with the bark on—say, about ¾ and ⅝ inch diameters. They require no nesting material. Of course, they breed with greater freedom in an aviary, but they will breed in the cage, though they may be a little longer in settling down to do so. It will be necessary for you to remove the young as soon as they can feed for themselves. It is no use with Finches or other birds attempting to breed with more than one pair in a cage. Your cage would accommodate about half a dozen, or perhaps nine, if kept very clean, that is of birds kept simply as a collection of pets. Breeding Foreigners, whether in cage or aviary, though probable, is never a certainty; one may succeed, and under almost similar condition another of the same species will not attempt to breed. Such as Zebra Finches, Cutthroats, Silverbills, White Java Sparrow and Bengalese will, however, generally attempt to reproduce their kind.

King Amazons.

S.H.—I must confess to not knowing what a King Amazon is. I should imagine it is a fancy dealer's name, which I have omitted to note; unless it is the King Parrakeet, an Australian species. The Blue-fronted Amazon is the best talker, but several of the other species very seldom utter a word, though they should all be capable of speech if pains are only taken with them. *Re* the dark green birds, these I take to be Yellow-fronted or Double-fronted Amazons, and though they talk a little, they do not equal the Blue-fronted. Cockatoos are very variable as to talking ability. Some only speak a word or two, while others are quite talented. The Sulphur-crests I have found to be as good as any. A good Grey is the best talker. I do not know of any coloured plate of various species of Amazons. "Greene's Parrots in Captivity" depicts several species, but the work is out of print, and only procurable by advertising, or from a second-hand bookseller. If the above does not meet your need, please repeat query.

Grey Parrot not Talking.

E. Tracy.—I fear I cannot help you much, only counsel patience, and also perseverance with teaching it, both by constant repetition of a word or two, and keeping it where there is plenty of conversation. The first thing for it to do is to overcome its nervousness; be as quiet and still as possible when in its vicinity and attending to its wants. At the same time, the bird had better be kept in a room where some are continually about more or less. Children indulging in noisy play may easily badly scare the bird. Talk to it quietly, find out some article of its diet of which it is fond, and continually offer it some of such in your fingers, and by such means overcome for it its nervousness and fear. Of course, I can only advise you in the general; you must modify same to suit your individual birds, but you must tame it and overcome its fear before much progress can be made.

Crimson Tanager.

Jumbo.—I do not know of a Tanager which is known by the trivial name of Crimson Tanager, and judge from your description you have a male Maroon Tanager, which is much rarer than the Scarlet, its value being quite double. By the way, I am under the impression that the name Crimson was suggested for the Maroon when it first came over. Its scientific name is *Rhamphocelus jacapa*, and is a native of South America. Its name Maroon about signifies the difference of colouration between the two species, both of which are hardy when they have been a few months in this country, and may be kept out of doors all the year round.

Birds for C.P. Aviary.

A.E.S.—In a mixture such as you suggest I should certainly procure males, not but what these will call out for hens during the time the pairing fever in on them, but in the precincts of a C.P. aviary cage there is no scope for breeding with several pairs, and one pair breeding, as the Zebra Finches would be almost sure to attempt to do, would certainly cause jealousy and trouble. With Waxbills the case is different; you could have pairs of these as they seldom attempt to breed, even under the most favourable conditions in captivity. I think a dozen would be ample for your cage, and even then it must be kept strictly clean. If you are keeping the cage in an ordinary living-room they can be procured any time, but if in a cold room then you had better wait for warmer weather. You must be careful not to keep the cage in such a position that a draught can blow through it.

Amazon Parrot with Indigestion.

E.W.—There is not much the matter with your bird at present, but if the nuts do not appear to agree with the bird, I should certainly limit the supply, though I should have no hesitation in giving a bird two or three at a time, and at several times during the day. But I don't give them, as a rule, daily, or the advantage of them varying the diet is done away with. Is it the nuts that are responsible for the trouble? You don't say how you are feeding. If you supply me with this information, possibly I can give you more definite help. In the meantime, put one teaspoonful of Dinneford's Magnesia in its drinking water (two tablespoonsful) every other day for a week. Do not give tea, coffee, or milk slops, or any kind of animal food.

Some Budgerigar Queries.

A.W.—(1) Remove the partitions and put in two pairs of Budgerigars. Hang up four husks each, one as far apart from the other as possible, but all near the top of cage. You will have to remove the young as they are able to fend for themselves. (2) I have known them to breed in one much smaller, but they frequently take a long time to settle down to nesting in such confined quarters. (3) No, and they are, of course, more profitable, as their progeny command a better price. (4) Yes, they are quite ready to mix up and interbreed; at least it often happens that if a pair each of Greens and Yellows are put in an aviary or cage they will more often than not cross mate. The progeny of Green and Yellow, or Yellow and Green cross, invariably come 95 per cent. of pure Greens. Unless you have space for three pairs—which should be two pairs Yellows and one Green—you had better confine yourself to either Yellows or Greens.

Birds for Drawing-room Cages.

L.T. 495.—(1) 12 at most, and cage must be cleaned daily. If you wish to breed you must confine yourself to a single pair—say, Zebra Finches. (2) 24, providing your selection consists equally of small Waxbills and Finches, subject to same conditions as in No. 1, though in this latter case you could try single pairs in each division. (3) Not if proper provision is made for the carrying off of fumes; of course, if the whole atmosphere of the room is permitted to become vitiated with gas fumes, then the result could not fail to be other than harmful, but providing proper ventilation is secured there should be no harmful effects. (4) Yes, but it would be better to let both pairs fly together, taking the precaution to keep them apart for some weeks to secure proper pairing of the respective pairs. See other replies in this issue as to the risks of cross-mating.

Feeding Baby Parrot.

M.S.—I don't like such a diet as egg and milk for a Parrot under any conditions, and I am not surprised at it looking mopey. Boil some maize, then pound it up, and mix with it some ground plain biscuit, and feed the bird with this, if it will not eat of its own accord; at the same time, keep some of the seed mixture advised in this column continually in the cage, and, when it is freely eating same, discontinue the soft food. If it will eat a little ripe fruit, so much the better. Give it a little water to drink several times a day, well coloured with Parrish's Chemical Food. You must see that its bowels are kept freely moving, not loose, and if there should be any signs of constipation a little water that has been made just saline with Epsom salts will give relief. Hope there will be no ill effects from the unwholesome diet you have been giving.

Brevities.

G.M.—I cannot help you, as you give me no idea as to how the birds are kept, whether in cage or aviary, or what nesting accommodation. If you will supply details of the environment of your birds I shall have pleasure in endeavouring to help you out of your difficulty.

T. Pope.—It is the Red Rosella Parrakeet. In a small show, when in finest condition, it should stand a good chance of recognition, but I must frankly confess that where entries proved plentiful, beautiful as it is, its chances of catching the judge's eye are not great. It is so well known, and has been imported freely for so many years, that more uncommon species, if in condition, would take the precedence.

Min.—Yes, the diet is right, and so long as it keeps plump it will be all the better for dry food. Of course, as it is so young, if you find it losing flesh, give it a little boiled maize, which only keeps fresh one day, and the food vessel must be kept clean. Try it with ripe fruit, and plain dry biscuit. Note other replies as to diet in this issue.

Baby Amazon.—Glad to note treatment has been so successful with your bird. I most certainly ascribe the fit to undue excitement. You took the best measures possible; if there should be any recurrence please send particulars at once. You would find a Tui Parrakeet meet the case, but Parrots are jealous creatures, and your Amazon will probably strongly object to your fondling another in its presence.

Budgerigars in Cage (Vernon Lee).—Yes, but two pairs would be more likely to succeed, as three pairs would fully occupy your space and leave no accommodation for the young. See several other replies in this issue for further treatment.

Budgerigar Ill (Novice).—Exposure never harmed these hardy creatures yet; they are better out of doors than in, providing they have a roof to shelter under at night, and husks for sleeping accommodation. As with humans occasionally one goes wrong, and it almost appears as if yours had contracted pneumonia, but it may be only a chill. Get a mixture of equal parts of ipecacuanha wine, oxymel of squills and glycerine, dilute a small quantity with an equal bulk of water, and give it a little three times a day direct to the beak till the cold yields.

Class for Foreign Hybrids (Ruby).—Since replying to you last week, I have been able to look this matter up, and find that a class for Foreign bird Hybrids was provided in the schedule of the Crystal Palace Show, but presumably was cancelled by reason of insufficient entries.

POST MORTEMS.

Mr. J. North, 435, Oxford Road, Reading, will examine cage birds for a fee of 1s. 6d. each bird; for a reply direct, 2s. 6d.; analysis, 21s. Subjects for post-mortem examination must be sent packed in a box direct to J. North, with fee. Any sent to the office of this paper will be thrown away, and if a fee is enclosed the loss will be the sender's.

Roller Canary (Bird-Lover).—Excessive enlargement, inflammation and haemorrhage of liver. This bird seems never to have developed properly; its plumage is exactly like that of a nestling, and I should think it had never come into song. The disease may be hereditary, or acquired; my impression favours the former. It may also be infectious, so let all cage floors, perches, etc., be washed with Boric acid solution of the strength one teaspoonful to one pint of hot water.

Goldfinch and Canary (Mrs. Stephens).—Both birds died of inflammation of liver and lungs, possibly they "took a chill" on their recent journey. It is always prudent to give some soft food after a journey, particularly during very cold weather.

GENERAL.

Answered by THE EDITOR.

Postage (A. H. Meadowcroft).—A penny stamp is necessary.

An Offer (W. Young).—You write: "I will give 5s. cash down," but do not explain what it is that you are ready to part with your crown for.

Reading C.B.S. (G. A. Charles).—Your club notice, posted Thursday, reached us too late for insertion last week (after we had gone to press, in fact). See note at head of the Club Notice column.

An Advertisement (Old Jack).—We know nothing to the detriment of the advertiser you refer to. If you like to conform with rule 8 we will write him on your behalf.

Railway Company and Birds (Ike).—Railway companies are notoriously "long-winded" in paying out claims made against them. Make a second application, and if payment does not result in due course, write again, and tell them you will take the matter into the County Court, through which (failing peaceful settlement) your remedy lies.

Wholesale Firms (Roller).—It is contrary to our rules to recommend any particular firm, or firms. You will find wholesale firms advertising in our columns, and we advise you to write them. Cages (wooden) you would, we think, need to get made in your own town, as the carriage would be a serious item, seeing that you want them to sell again. For wire cages (and all items, in fact) consult the "Directory to the Bird Trade" in CAGE BIRDS ANNUAL.

Y.U. and C.B.U. (Non Animus).—As Mr. Hammond himself deals fully with the point you raise, we have not thought it necessary to print your enquiry.

Hawfinches at the Palace (Sunflower).—Your "poetry" is "all right," just as you say the Hawfinch was, but unfortunately we have such a pressure on space at the moment that we are afraid we cannot find room to print it.

The C.B.U. Annual Meeting (D. A. Ogilvie).—Owing to severe pressure on space, we have regretfully been compelled to hold over your letter until next week.

A Letter (T. Bowden).—If we printed such a letter as the one you send us, we should have an action for libel brought against us at once, a fact of which you seem unaware. Why did you not recover the value of the dead bird from the railway company? This you were quite entitled to do.

A Plate (A. Potter).—We cannot promise the plate you mention in the issue specified, but we have the subject under consideration for the near future. We have already issued one coloured plate of this species.

Cuckoo Eggs (John Craig).—We have to thank you for an interesting contribution, which we shall hope to print in the near future.

Foreign Hybrids (F. J. Day).—Thanks for kindness in writing us. We understand that Mr. Weston has since looked the matter up, and refers to it this week.

An Aged Canary.

Mr. F. G. Ord, writing to a daily paper, from East Kirkley Thorne, Ponteland, tells of the death of a neighbour's Canary after the bird had been in possession of its owner for 15 years and 3 months. Mr. Ord adds:—"The bird was in full song when my friend got it; so without doubt it must have been 16 years old, or more."

A Note on the Grebe.

The beautiful little Grebe appears to have quite settled down as a London and suburban bird, for he can now be found in most of the parks where there is water and suitable accommodation for it. It was never thought at one time that this shy species would ever make itself at home, as it is very short on the wing, and it was feared it would find a difficulty in negotiating the dangers of London. It is on record, however, that in 1870 there were a large number which visited the Round Pond at Kensington, but they only stayed for a time. The first pair remained to breed in St. James's Park some time afterwards, and it is just possible the birds in other spots are descendants of these pioneers. They are most interesting birds to watch, their mode of getting a living being so different to that of commoner birds. In addition to this, the raft-like nest of rushes and water weeds is a sight worth seeing to anyone interested in bird life who is fortunate enough to get a peep at it.

CLUB REPORTS.

PENDLETON AND SALFORD O.S.

Meeting held Feb. 24th, at Chapel-street Congregational Hall, Salford, when there was a good attendance. The proposed new rules were laid before the members, and met with their approval. It was proposed to hold a table show of Yorkshires and Norwich, to be followed by a judging competition at our next meeting on March 9th, when Mr. Sam Cook will judge. The society are giving a silver medal for most points in the show. Fanciers and friends are invited.—W. JACKSON, Hon. Sec.

KILMARNOCK C.B.F.C.

A judging competition was held on February 26th, the idea being to show novices and any other members how easy it was to differ from a judge's decision at a show. A four-class competition (two Norwich and two Border classes) was arranged. Norwich classes were judged by Mr. William Muir, and the Border classes by Mr. James Jones. The members were to try and come to the same decision. Although most of the members present availed themselves of the opportunity of being judges for the time being, not one of them came to the same decision. A few got the firsts birds all right, but could not follow the judge's decision. After all had satisfied themselves at judging their favourite birds, Messrs. Muir and Jones made a few remarks on their awards. After a good many questions had been asked and answered, a very good evening's entertainment closed with a vote of thanks to the members who provided the birds for competition, and also to Messrs. Muir and Jones for their judging and remarks. Next meeting will be a lecture by Mr. James Hutchieson on colour-feeding, on 11th March. Another judging competition will be held on March 25th for British birds of four classes. Judge, Mr. James Johnstone.—R. MCCAW, Secretary.

NORTHERN CREST CLUB.

The sixth annual general meeting was held at Newcastle, on Feb. 26th, when the following were present: Messrs. Currah, Riseborough, Swan, Farrar, Hands, Armstrong, Stanger, Brown, Hutchinson, Almond, Curry, Dobson, Lister, T. Taylor, Graham, and Robson. The balance sheet was passed. The hon. sec. read report for the year, and regretted he was unable to retain office as sec. for 1908. The following members were elected: Messrs. W. Curry and T. Heslop (Newcastle), and W. F. Hardy (Littleborough). Election of officers for 1908: President, W. J. Taylor, Esq.; Vice-Presidents, re-elected with the additions of Messrs. R. W. Dixon, Durham and T. Robson (Newcastle); Chairman, Mr. J. Currah; committee, re-elected with the addition of Messrs. Hands, Crawhall, T. Taylor, and R. Armstrong; auditors, Messrs. Brown and Crawhall; hon. sec. and treas., Mr. J. G. Hutchinson, 45, Hotspur-street, Heaton, Newcastle-on-Tyne, to whom all subscriptions should be sent; last day for same, March 31st. The minute relating to shows being held alternately at Sunderland and Gateshead was rescinded. Blaydon and Gateshead were each proposed for the annual show, Blaydon receiving five votes and Gateshead seven votes. Show will therefore be in conjunction with Gateshead, where the two silver cups, gold and silver medals, and money prizes will be awarded the same as last year. Mr. J. Farrar (Sunderland) brought forward a proposal for patronage of other shows as follows: That from now all medals be withdrawn outside the club show, and instead a points special be given at the same shows, viz., Newcastle, South Shields, Sunderland, Gateshead, Wallsend, Blaydon, and Jarrow, all societies receiving patronage to judge to seven birds, points to count also at annual show for young birds only, bred and owned by the exhibitor, 1st 40/-, 2nd 20/-, 3rd 20/-, 4th 10/-. Points to count, 7, 6, 5, 4, 3, 2, and 1. This was carried unanimously. —T. ROBSON, late hon. sec., 41, Shield-street, Newcastle-on-Tyne.

SCOTTISH CREST CLUB.

The annual general meeting was held in Nelson's Temperance Hotel, Ingram Street, Glasgow, on February 29. The minutes of previous general and all committee meetings during 1907 were read and passed as correct, on the motion of Mr. J. Young, seconded by Mr. G. McPhail. The balance-sheet was gone over, and the auditors reported that the books and vouchers were correct and left a balance in hand of £1 16s. 6d., a slight decrease on last year's balance, owing to the guaranteed classes at Kilmarnock not being filled. Mr. R. Adamson moved, and it was seconded by Mr. Wm. Griffiths, that the balance-sheet be accepted, which was carried unanimously. The distribution of medals then took place. The winners of gold medals were Messrs. John Noble, best young Crest, and John McLay, best young Crestbred; silver, best old Crest, Mr. Wm. Cairns; best old Crestbred, Mr. Jas. Reid. The offer to present a cup, sterling silver, valued £15 15s., by Mr. C. Roberts (Blackpool) to S.C.C. was next put to the meeting. On a vote being taken there were only three against its acceptance, and the secretary was instructed to thank the donor for his generous offer, and also for his compliments to S.C.C. A note from Mr. J. McNaughton (Larbert) asking the members to clearly define what constitutes a Grizzle Crest was read. A long discussion took place, and the finding was a bird with clear feathers mixed with green feathers did not constitute a Grizzle. Mr. Campbell moved, and it was seconded by Mr. G. McPhail, that a bird with any dark green feathers in its crest be exhibited in class for dark Crest. The names of the following five new members were proposed and accepted:—Messrs. T. B. Gray, Grayburn Couper, Angus; D. Clarke, Keppin Street, Airdrie; Wm. Cunningham, Coatdyke, Coatbridge; J. Cram, Dean Lane, Kilmarnock; and G. Henderson, Chester Street, Shettleston. Mr. G. McPhail moved that the cup competition should have at least four classes for Crests and Crestbreds. The first committee meeting will be called for April 25.—ALLAN CHALMERS, Hon. Sec.

HOUSE'S
CANARY MANUAL
Price ONE SHILLING. Post Free 1/2.
Superbly illustrated by the Champion Canary Artist Mr. H. NORMAN. EVERY BIRD DEPICTED IS A VERITABLE MODEL, and shows the breeder what to aim for. Some idea of the popularity of this Practical Manual may be gathered from the fact that under the title of "The British Canary," it has passed its Third Edition, entering upon a Fourth Edition of 5,000 copies under the new title of "HOUSE'S CANARY MANUAL." MR. HOUSE has thoroughly revised and brought this work up-to-date and incorporated a chapter on the "Roller or Singing Canary."
F. CARL, 154, Fleet St., London, EC.

THE YOUNG NATURALIST.

Prizes of 1s. and two of 6d. each will be given each week for the best three anecdotes about birds written on postcards. Competitors must be children under sixteen years of age, and must state from where stories are taken.

Two stars indicate the Winning Contribution; one star the runners up.

*In Time for the Legs.

Just near our house we have some friends who have a Magpie. One night the bird shouted out. "Fanny, come here quick." My friend who owned the Magpie ran downstairs quickly before he had time to dress, and saw a pair of legs just scuttle off the window. In the morning he found all the silver laid on the hearthrug. So the Magpie saved a robbery.—G. H. Mills (age 13), Denstone College, Denstone, N. Staffs.

*The Greedy Jackdaw.

A Jackdaw was observed to fly off with a piece of bread to the roof of a house, where he began to eat it. Presently two Sparrows, which had followed, perched close beside him. Whilst pecking the bread to pieces a few crumbs slid down the roof of the house, when a poor hungry Sparrow ventured to try to secure them. The Jackdaw immediately dashed at him, leaving the larger piece. Another Sparrow, who was watching his opportunity, pounced down on the bread, and flew away with it before the Jackdaw had recovered from his surprise at his boldness. So it was that greediness paid the penalty it well deserved.—Taken from "Chatterbox" by Alice Victoria King (age 10 years), 89, York-street, Cambridge.

**A Very Clever Canary.

Some birds are very clever indeed, although they cannot speak they can indicate by their actions. For instance, my Norwich Hen Canary is very sensible; when April comes round it flies about the cage with a feather in its beak, telling us the breeding season is at hand. The other day I had a piece of muslin tied around the cage as a temporary preventive against its throwing out seed-husks. Its water had been spilled and was very low, and after making several useless attempts to reach it, it dipped the end of the tape which held the muslin, into the water, soaked it through, drew it up with its beak and claws, and licked the end. It repeated this performance until its wants were satisfied.—W. J. Hosgood, (age 15), 14, Balgray Terrace, Springburn, Glasgow.

SINGING CONTESTS.

LEEDS.

Contest on February 29th; three prizes for the best of 20 birds. 1st prize, T. Johnson; 2nd, C. Biss; 3rd, T. Stead. Judges, Messrs. Crane and Fisher. Also a contest on March 1st, when 20 birds faced judges. 1st and 3rd prizes, T. Stead; 2nd prize, T. Summers; 4th, C. Biss. Judges, T. Hineson and C. Cooper.—T. SUMMERS, Hon. Sec.

Usual weekly contest took place at Skinners Arms, Buslingthorpe-lane, when 25 birds sang. 1st, J. Simmons (Woodhouse); 2nd, J. Ridgewell (Sheepcar); 3rd, J. Granger (Meanwood). Judges, J. Clark and G. Towers.

SKINNINGROVE.

Usual week-end contest held on February 29, when the winners were:—1, Fox; 2, Leng; 3, Jackson. On February 22 the winners were:—1, Fox; 2, Burnett; 3, Whelford. On February 15:—1, Hodge; 2, Burnett; 3, Jackson. Judge, Mr. F. Deadon; timekeeper, Mr. J. C. Havelock.—M. DOBSON, Sec.

YORK.

Weekly contest held at Bricklayers' Arms, Palmer Lane, Hungate, on February 29. Twenty-four birds faced judge. Result:—1, 2, Key; 3, Foster; 4, Chaplin; 5, Whitehead; 6, Evans. Judge, J. Paver; timekeeper, J. Limbert.—WM. EMPSON.

Linnet contest held at Crown Inn, North Street, when 24 birds sang for six good prizes. Result:—1, J. Firth; 2, 6, Bean; 3, Oxberry; 4, Grainger; 5, G. Horwell. Judge, Mr. Perry; timekeeper, Mr. J. Smith.

CROOK.

A Linnet singing contest was held at Mr. J. Anderson's Royal Oak, Crook, on February 29. Forty-five birds sang. Winners:—1, 3, Brady; 2, Holmes. Mr. Geo. Reed (Brandon) judged, and gave every satisfaction. Timekeeper, Wm. Rutherford; bookkeeper, Wm. Fairless.—WM. RUTHERFORD.

WARRINGTON.

Contest held at the club-house, the Alexandra Inn, Scotland Road, on February 29. The singing was excellent:—1, J. Lamtou; 2, W. Leah; 3, J. Bullock. Judges, Messrs. J. Ball and S. Leigh; timekeeper, Mr. H. Stanway. The usual fortnightly contest will be held at the Alexandra Inn on March 14. Birds hung at two o'clock.—J. MATHER, Hon. Sec.

BLACKBURN.

The second open singing contest of the season was held at Thorn Inn, on Feb. 29. There was a very good attendance and 19 birds competed for six prizes: 1st, "Owd Moy," 9 mins, 40 secs. (ten minutes hanging); 2nd, Jackson; 3rd, Halliday; 4th, S. Fletcher; 5th and 6th divided between Jackson and R. Sheffield. The first club and cup singing contest will take place on March 14th, at Good Samaritan Inn, Grimshaw Park. Anyone wishing to compete must become a member immediately.—JOHN SHEFFIELD, Sec.

ELSECAR.

Week-end contest held at Gate Inn, Hoyland, on February 22nd, when 12 birds competed. The prize-winners were: W. Lofthouse, 1st, 3 min. 51 sec.; A. Maples, 2nd, 3 min. 19 sec.; and S. Vaines, 3rd, 3 min. 15 sec. Each bird five minutes hang. Timekeeper, Mr. A. Watkin; Marker, Mr. J. Denton. Another contest February 29th at Turf Tavern, Hoyland, when 15 birds competed. The winning bird did 4½ minutes out of five minutes. The prize-winners were:—W. Nadine, 1st, 4½ min.; S. Vaines, 2nd, 3 min. 47 sec.; E. Charles, 3rd, 3 min. 18 sec. Timekeeper, Mr. A. Watkin; marker, Mr. J. Denton.—E. CHARLES Sec.

UNDER THE WHITE ROSE.

FOLLOWING up last week's survey of the Yorkshire Union Rules, we come to No. 37: "A novice is one who has not won a first prize in open competition, or a Yorkshire Union Novice Medal," and it is proposed to add "This rule has no bearing on non-union or members' shows." The addition makes practically no difference whatever to the old rule, as shows not held under Y.U. rules would not be governed by this rule, but by the rules of their own society or union, and as regards members shows, it is for the societies holding them to make the definition as to what shall constitute a novice at such shows.

NEXT comes rule 41, which reads, "Novice Classes limit £4 4s., including cage." Here two amendments are put forward: Firstly, "That the price limit in Novice Classes be £5 5s.," and secondly, "That the price limit in Novice Classes be abolished." The reason is not far to seek. Under the present rule if a Novice should be fortunate enough as to have a "clipper," he is not long before he sees a claimed ticket up on the cage, and his dream of future wins and a Novice Medal "vanish like mist before the morning sun." But on the other hand we have the original idea of a limited price, and this was if possiblo to avoid the system of borrowing which was said to prevail at one time in the Novice Classes. The Novice must vote for which they think the lesser of two evils—run the risk of having their best birds claimed, or perhaps be showing against professionals under the cloak of a novice!

THEN we come to the proposed new Rules, of which there are five, two of which are upon the same subject. No. 1: "That the Council of the Union provide a minimum classification for all their shows." The probable object of this is to avoid the jumbling up of several classes into one. A very good idea, but much depends upon the number of classes this minimum is fixed at. If too large, some of the weaker societies will look askance, as forcing them to run greater risks than they would care to undertake. Nos. 2 and 3 both deal with the object of curtailing the number of shows. The former reads, "That in order to curtail the number of shows, the societies be bracketed in couples (in the order they stand for next season), and arrange which of the two shall hold a show. Those societies holding a show one year to give way the next. No. 3 reads, "That in order to curtail the number of winter shows the societies in the Union hold six First Feather Shows and 14 Winter Shows, or in same ratio (according to number of shows to be run) the first two winter shows one year to have the last two First Feather Shows the following year, and those holding the two first First Feather Shows one year, are to have the two last dates of winter shows the following year. The societies holding the last six dates at present shall hold First Feather shows next year. Competitions if possiblo to be arranged to run through all shows."

THE main point against the first suggestion is that the old established societies would not like to forego their show even for one season, much less than every alternate season, as they consider to do so would mean a great loss of prestige to their society. But on the other hand, new and prosperous societies also wish to hold shows, and should not be held back if it is at all possible to allow them to run shows. The principal fault of the other suggestion is the known antipathy of many exhibitors to showing young birds in their nest feather, thereby running, as they say, great risk of losing them. Otherwise the idea is good; the only other contentious point being the competitions, and perhaps it would be best simply to form some small competition for these shows only. The subject is a knotty one, and requires grave and deliberate consideration from all fanciers.

NO. 4 is also in a certain sense upon the same subject, viz: "That the Novice competitions be divided into two periods—covering the first and second half of the shows respectively, and the medals divided accordingly, half to each period." The hard work entailed (both upon the birds and exhibitor) in a run of eighteen shows is decidedly too much, and this rule will have to some extent be studied in conjunction with the two previous, as should either of the latter come into force, this one will not be required. No. 5: "That all exhibitors provide their own water tins, a uniform standard to be adopted." This is instead of being supplied to each show by the Union, the want of cleanliness being the objection to the tins as at present in use, and it will be a decided improvement, if (?) the uniform standard is strictly enforced.

FANCIERS must not forget that to-day (Saturday, March 7th) the great Amalgamated Smoking Concert and Prize Distribution takes place at the Market Tavern, Godwin Street, Bradford, and the grand array of talent will place the event on a plane far above anything that has ever taken place in Yorkshire. It will be a treat that should not be missed. Mr. D. Sunderland, Chairman of the Y.C.C., will take the chair at 6 o'clock, in which arduous duties he will be assisted by the respective Presidents of the various Societies interested, viz., Yorkshire Union, Mr. H. W. Battye; C.M.Y.C.C., Mr J Greaves, and Mr. W. A. Cowgill for the B. and C.B.B. and M.C., truly an array of officials worthy of this auspicious occasion. I hear, however, that the ladies are a little disappointed they are not specially invited to join this merry party. And maybe some of the gentlemen who arrive home in the early morn will be sorry this is so; those fortunate ones who have a little prize to carry home will come off best. Lucky men.

DURING the past week quite a number of the societies in Yorkshire have had either members' shows, lectures, or washing exhibitions, all of which are interesting and instructive to fanciers. Great Horton G.I.O.S. had a nice little show, at which the junior partner of Messrs. Sutcliffe and Son officiated as judge, this being the second time he has taken members' shows. These members' shows, beside being training grounds for future exhibitors, should also be the same in regard to judges, and societies will do well to select a good fancier with a view to "qualifying" him for an open show.

YORKSHIRE Union members were a little surprised to read in the report of the Cage Bird Union annual meeting that its secretary, Mr. Lythgoe, had been in communication with Mr. Hammond, the secretary of the Yorkshire Union, in reference to coming to some agreement as to showing at each other's shows, instead of, as at present, C.B.U. members not being eligible to exhibit except at C.B.U. shows. The cause of the surprise was in the fact that at the Y.U. meetings no such "business" had ever been brought forward, and many enquiries have been made of Mr. Hammond in respect to the statements. The true facts are that Mr. Lythgoe only wrote Mr. Hammond "privately" for his opinion upon the matter. The subject has often been discussed amongst the fanciers in the Yorkshire Union, and it is strongly felt in all quarters that amicable terms should be come to in regard to both exhibitors and disqualifications, etc. As far back as October 5th of last year I made the statement that such terms should be brought forward. I am still of the same opinion, and I think that if a meeting could be arranged between representatives of the two bodies that it would not take long to fix up the matter to the general satisfaction of the Fancy at large.

THE simplest way, and perhaps the best would be: "That all shows held under either the C.B.U. or Y.U. be open to all members of either Union;" and: "That all disqualifications (of either judges or exhibitors) are acknowledged by both Unions." These two simple yet effective rules are really all that are required for the smooth working of the two bodies. At present the cause of discord appears to be that the C.B.U. must have their rules above those of the Y.U., even at those shows held under the competitions, etc., of the Yorkshire Union. Surely the rules of the Y.U. are enough for any fair-minded fancier. In regard to the license of the C.B.U., why should the Yorkshire Union Societies have to pay 5s. to get the entries of members of the C.B.U., when on the other hand the societies of the C.B.U. can get the entries of the Y.U. without any fee whatever? And if amicable terms are not come to, the Y.U. should also put a license of 5s. on all shows who want the Y.U. members' entries. What's fair to one is fair to another. Mr. Curtis seems to be the only man on the C.B.U. who could really find it in his heart to come out, straight from the shoulder, and tell people who they were afraid of. In my opinion, if there were a few more broadminded fanciers on the C.B.U. it would not be long ere the two Unions would be working harmoniously together.

"STRAIGHT 'UN."

REVIEW OF SCHEDULES.

Brotton.—March 21st, Oddfellows' Hall.—Judge, Mr. A. Thomas. 13 classes: Yorks. 4, Nor. 4, Mules 1, Sell. 1, Brit. 3. Prizes, 8s., 4s., 2s., and specials. Fee, 1s. Entries close March 16th to WM. MAIN, 13, Railway-terrace, Brotton.

Ferndale.—April 21st, Assembly Hall, Ferndale.—Judge, Mr. Alf. Green. 3 open classes: Can. A.V. Brit., and For., one each. Prizes, 7s. 6d., 5s., 2s. 6d. Fee, 1s. Entries close April 15th to MORRIS and GREEN, 82, Duffryn-street, Ferndale.

YORKSHIRE
CANARIES.
HOW TO BREED, MANAGE AND EXHIBIT.
By H. W. BATTYE (President of the Yorkshire Union) Illustrated by Messrs. H. Norman and A. J. Simpson.
Price 1/- nett. Post Free 1/1½.
This book is absolutely the very best that has been put on the market. It deals fully with the Yorkshire and its sub-varieties, and should, without doubt be in the hands of every breeder of the bird of Grace and Beauty. It contains instruction upon Pairing, Breeding, Moulting, Exhibiting and how to treat this popular variety in both health and disease.
Popular Book. Popular Price.
1/- nett, by post 1/1½.
"CAGE BIRDS," 154, Fleet St., London, E.C.

THE SHOWS.

HASTINGS UNITED C.B.S.

The Society held their annual show of pairs matched for breeding at their headquarters, the Royal Oak Hotel, on February 26. Mr. J. Stevens judged.

NOR.: 1, A. E. Godden; 2, 4, Ellis; 3, Pennells. YORKS.: 1, Coombs; 2, 3, Morris. SELL.: 1, Bellamy; 2, Coombs. HYBRID PAIRS: 1, 3, Cragg; 2, Barham. Mr. T. G. Coombs won the special for best pair in show, Mr. A. E. Godden for second best pair, Mr. J. H. Bellamy for third best pair, and Mr. R. Cragg for fourth best pair. After the show the prizes were presented by Mr. J. Booty.

A. E. GODDEN, Hon. Sec.

SUNDERLAND C.B.A.

The fortnightly meeting and table show was held on Feb. 29th. There was a good attendance of members and a splendid show of matched pairs. Mr. J. T. Clarke (Sunderland) officiated as judge, and gave every satisfaction all-round. While the judging was going on we continued our meeting. It was agreed to take the Workman's Hall as usual for our annual show, the date fixed being Nov. 20th and 21st. The judging being finished, the awards were as follow:—

NOVICE CAN. OR BRIT. PAIRS: 1, c, Riseborough; 2, hc, Bell; 3, Smith; vhc, Cracknell. PAIRS FOR HYBRID AND MULE BREEDING: 1, Dr. O'Neal, Goldfinch and Greenfinch; 2, hc, Riseborough, Goldfinch and Canary, Greenfinch and Bullfinch; 3, Smith, Goldfinch and Canary; vhc, c, Waters, Linnet and Goldfinch and Goldfinch and Greenfinch. PAIRS CANARIES: 1, c, Riseborough; 2, vhc, Farrer; 3, Taylor; hc, Dr. O'Neal. Two specials were given by Mr. J. Keenlyside for Canary, Hybrid and Mule pairs, and a special was given by Mr. J. Farrer, chairman, for best pair in novice class. Prizes were won by Mr. F. Riseborough, novice class, Dr. O'Neal, and Mr. J. Farrer respectively. Another table show will be held at next meeting, March 14th. Mr. J. M. Walker will give special for best Yorks. Canary for novices. Will our novice members do their best and make this table show a bigger success than the previous ones. Mr. T. Jackson (Monkwearmouth), was proposed for membership by Mr. J. M. Walker and was elected. New members are invited.—John Copeland (Assistant Secretary), 23, Ross-street, Monkwearmouth, Sunderland.

FELINFOEL (Llanelly).

The first annual show of this Society was held on February 29, at the Council School, a very good place. There were some fine specimens on view, especially as it was a nine miles' radius show. The schedule opened with the popular Norwich Plainhead, and some grand birds were staged by Messrs. W. P. Jones and D. R. Jones. Yorkshires turned up well, the winning Buff cock of Mr. T. Williams being a beauty, which we heard had taken special for best at the recent Morriston Show. British and Mules turned out grand, the Goldfinch and A.V. Mule classes containing 18 entries each. The arrangements of the show were in the hands of that enthusiastic Norwich fancier, Mr. W. P. Jones (secretary) and Mr. W. Bowen (chairman), and a very hard-working committee. Mr. S. J. Nicholas (Swansea) judged, and gave satisfaction.

NOR. COCK (9): 1, 2, W. P. Jones, 1st yellow very typical and a blaze of colour, 2nd clubby and big, good head; 3, hc, Evans, yellow, good type; 4, D. R. Jones; vhc, Rees; c, Jenkins. HENS (2): 1, W. P. Jones, Buff, very good bird all round; 2, D. R. Jones, Buff, non-colour fed, one of the best for type. YORKS. COCK (11): 1, 3, and runner-up for special best bird in show, Williams, clinker Buff, finely moulded, straight as a rush, takes good position when handled; 2, Jenkins, yellow; 4, vhc, Bennett; hc, Simon; c, Saunders. HENS (6): 1, Jenkins, good Yorkie, very stylish; 2, Saunders, another good one; 3, Morris, nice bird; 4, Jones; vhc, John; hc, Bennett, good hen, but had knocked tail about like a fan. A.V. CAN. (10): 1, 2, Simon, Crest and Crestored, two excellent birds, the Crest having the crest nearly over beak; 3, hc, Thomas, Border Fancy leading; vhc, Williams; c, Griffiths. GOLDFINCH (18): Very good class, and contained the best Goldies of the district: 1, Lewis, easy win, regular stormer, beautiful blaze and colour all round; 2, c, Evans, good blaze; 3, 4, Jones and Evans, former biggest in class, but has faulty wing carriage; vhc, Harry; hc, Thomas. MULES (18): 1, 3, Thomas, yellow Goldie and Buff respectively, 1st stormer for colour and of good size; 2, Jenkins, Linnet Mule, grand size; 4, Bowen; vhc, Jones and Evans; hc, Derrick; c, Thomas. LINNET (12): 1, Morris, a good bird, but some thought should give place to 2nd; vhc, Lewis, regular Nor. type, with an abundance of breast markings, should moult out a good bird with care; 3, Bowen and Jones, another good Linnet, very steady; 4, Reynolds; hc, Saunders. CAN. (confined to Felinfoel): 1, Saunders; 2, Derrick; 3, Walters; 4, Davies. BRIT. (10): 1, Wehrle, Thrush, steady bird, very tame, also nicely marked; 2, hc, Jones and Evans, two field-moulted Bullies, 2nd very large bird, with grand breast colour; 3, Jenkins, Titlark, nicely marked, and very steady; vhc, Thomas; c, Lewis. MEMBERS' CLASS (16): 1, Morris, yellow Yorks.; 2, Jones, Goldfinch; 3, Jones, Yorks.; 4, Morris; vhc, Rees; hc, Clement; c Jones.

PORTH AND DIS. C.B.F.S.

The Society held their first annual show of pairs for Canary and Hybrid breeding on February 22 at their headquarters, Danix Temperance Bar, Hannah Street, Porth (confined to members only). Yorkshires, Norwich, Lizards, and Muling pairs did not turn up as expected, but the pairs on view were undoubtedly very choice ones. The poor entry was not very encouraging to the new secretary, Mr. R. G. Challenger, but he has been trained very well by his brother (Mr. J. Challenger, late secretary), and everything was well in hand. The judge was Mr. T. Melhuish (Cardiff), who gave every satisfaction. Three 2s. 6d. specials were given for the three best pairs by Davies Bros. (vice-presidents of the Society), and were won by Messrs. J. Challenger, A. H. C. Legg, and E. Llewellyn.

YORKS.: 1, spl, 2, Challenger, 1, yellow cock, buff hen. Cock of good length, stands like a Guardsman, nice neat head, good wing carriage, fine pipe tail, feather of good quality; hen, buff of splendid length nice, neat head and wing carriage, good pipe tail in good condition; 2nd, another splendid pair; buff, var. cock, clear yellow hen, cock of good length and style, standing well up from perch, nice head, wings and tail; hen of splendid quality feather, good stand, nice head, wings, and tail, good stylish one; 3, 4, Thomas; 3, another nice pair, yellow cock and buff hen; cock good length, neat head, wings and tail, nice stand; hen, good one for stand and feather, fine wings; 4, good pair, yellow cock buff var. hen, former nice quality feather and good stand; hen grand length and nice feather. NOR.: 1, spl., A. Legg, clear buff cock, yellow cinnamon marked hen; cock of good substance, well filled in head, good wing and tail carriage, nice level colour; hen a real gem; beautiful head, magnificent wing carriage, and very short wings and tail, very judiciously matched; 2, R. Williams, buff cock, yellow hen; cock of good substance, full chest, nice head, good wing and tail carriage, fine level colour, good all round bird; hen yellow (a non-fed), fine size, nice wings and tail, good condition; 3, Llewellyn, buff cock, yellow hen; cock a good one, hen nice shaped head, splendid type. MULE, ETC., BREEDERS: 1, Llewellyn, large Siberian Goldfinch and yellow Norwich hen; cock splendid size, nice face, good bars and buttons, beautiful tanning; hen nice wings, splendid size; 2, R. Gilbert, British Goldfinch and yellow Nor. hen; cock of good size bars and buttons and fine tanning; hen good one, nice size, splendid colour; 3, Metcalfe, British Goldfinch, yellow Norwich hen; cock nice tanning, hen of good all-round qualities, sweet head, nice wing and tail carriage; best hen of the three. The curious thing about this class was that the three hens were sisters.—A MEMBER.

STOKE NEWINGTON F.A.

A matched pair show was held on February 18th. The entries came well up to the average and some good specimens were exhibited. Special silver spoons for best exhibits were won by Messrs. H. Pike and Tuckey. Mr. J. S. Clarke judged.

NOR. (NOVICE): 1, 2, spl, Tuckey; 3, Morris. NOR.: 1, 2, 3, Langridge. YORKS. NOVICE (8): 1, Turner; 2, Lacey; 3, vhc, hc, Wells; c, Lacey. YORKS. (5): 1, 2, 3, Sweetman; vhc, hc, Penton. MULING: 1, 2, 3, spl, Pike; vhc, Penton.

BIRKENHEAD C.F.A.

A pair show of Canaries was held in the Temperance Hall on February 18th. There was a fine display of birds, some well-known winners being staged. There was an entry of 66. Mr. J. Burns, of Birkenhead, judged, and gave general satisfaction.

CL. YORKS.: 1, spl, 3, vhc, c, Harding; 2, Gardner; hc, Richardson. GREEN YORKS.: 1, spl, 2, Moss; 3, vhc, Gardner; hc, c, Dyson. CL. NOR.: 1, spl, 3, Tweedle; 2, spl, vhc, Porter. MULING PAIR: 1, spl, Tweedle; 2, Potter; 3, Watson; vhc, Gardner.—J. RICHARDSON, Sec.

WARRINGTON AND DIST C.B.S.

A members' show was held on Feb. 22, and turned out a great success. Mr. Jas. Emmett, the capable sec., had everything nicely arranged, and deserves credit for his able management of affairs. Specials were won by the following: Mr. Knowles' 2/6 class: 1, W. P. Fetcher; 2, W. P. Fletcher; 3, A. Stout; Mr. Langley's medal, W. P. Fletcher; Mr. Leigh's medal for British, J. Hampson; Mr. Pierpoint's Canary seed, British, J. Hampson; Mr. Leigh's medal for most points in Norwich, J. Emmett; Mr. Walter's Norwich cock, J. Emmett.

YORKS YELL. CK. (11): 1, Dukes; 2, 3, 4, Fletcher; vhc, Langley; hc, c, Stout. BUFF (8): 1, 4, Fletcher; 2, hc, Dukes; 3, c, Stout; vhc, Langley. HEN (11): 1, 4, hc, Stout; 2, vhc, c, Dukes; 3, Fletcher. NOR. YELL CK. (3): 1, Houghton; 2, Emmett; 3, Billington. BUFF (6): 1, hc, Walters; 2, Houghton; 3, 4, Emmett; vhc, Huggett. HEN (5): 1, 4, Emmett; 2, Houghton; 3, Walter; vhc, Huggett. A.O.V. CAN. (2): 1, Emmett; 2, Hampson. MULE OR HYB. (1): 1, Houghton. LINNET, ETC. (3): 1, Houghton; 2, 3, Hampson. A.S. BRIT. SEEDEATERS (5): 1, 4, Hampson; 2, vhc, Houghton; 3, Billington. SELL. (12/6) (2): 1, Cowell; 2, Tyrer. 7/6 (1): 1, Cowell.

YORK C.B.S.

The first members' show was held on February 19 in the All Saints Church Rooms. Entries numbered 96 in twelve classes, which must be considered in every way satisfactory. The quality throughout was of great merit, and the members are to ne congratulated on the excellent turn out. Mr. A. Wand, secretary, and Mr. T. Wright, chairman, had everything in order, and were ably backed up by a most enthusiastic committee. The general arrangements were all that could be desired. Mr. A. Brown (Gateshead) judged.

NOR. YELL.: 1, Shorney; 2, Boyle; 3, Hunter; vhc, hc, Wright. BUFF: 1, Boyle; 2, 3, Wright; vhc, Whitehead; hc, Pickering; c, Alderson. HEN: 1, Sissens; 2, Wright; 3, hc, Shorney; vhc, Alderson; c, Pickering. YORKS. NOVICE: 1, 2, Richardson; 3, Alderson; vhc, Pickering; hc, Thompson; c, Garnett. YORKS. YELL.: 1, 3, Campling; 2, Simeson; vhc, Chittenden; hc, Bardy. BUFF: 1, Alderson; 2, vhc, Campling; 3, Chittenden; hc, Simeson; c, Bardy. HEN: 1, 2, Campling; 3, vhc, Simeson; hc, Bardy; c, Whitehead. YORKS. NOVICE: 1, Simeson; 2 and hc, Campling; 3 and vhc, Oxberry. A.O.V.: 1 and hc, Richardson; 2, Boyle; c, Wright; vhc, Hunter; c, Thompson. GOLDFINCH, ETC.: 1, Whitehead; 2, 3, Boyle; vhc, Simeson; hc, Shorney; c, Goodall. A.O.S. BRIT.: 1, 2, Hunter; 3, Shorney; vhc, Sissons; hc, Nicholson; c, Goodall. MULE or HYB.: 1, Shorney; 2, Sissons; 3, Boyle; vhc, Dale; hc, Wand. The special for best bird shown by a novice went to Mr. Sissons.

BRADFORD (East) O.S.

The society held its first show of the year on February 22nd, at Park Chapel Schools, for the gold medals and other valuable prizes that are to be competed for at five shows to be held during 1908. The same keen competition which manifested itself throughout the shows of last year, again re-asserted itself, and provided Mr. W. A. Cowgill, of Girlington, who officiated as judge, with a stiff afternoon's work in selecting the winners. The entries totalled 101 in twelve classes and the birds staged were of extra good quality, many of them having carried off prizes for their owners in the Yorkshire Union shows during the past show season. The four highest birds of each competitor count towards the specials, and the following were the winners of most points at Saturday's show: Champion section, Messrs. Farrar, Stables, White, Rushworth, Hill, Gelder. Novice section, Messrs. Laycock, Priestley, Wilkinson Bros., Crowther, Northrop, Lowes and Whitehead.

CHAMPION SECTION: CL. YELL. YORKS. (6): 1, 2, Farrar; 3, White; 4, Gelder; vhc, Hill; hc, Rushworth. BUFF (8): 1, White; 2, Hill; 3, Gelder; 4, hc, Rushworth; vhc, Stables; c, Briggs. TICKED, ETC. YELL. (8): 1, c, Stables; 2, 3, Rushworth; 4, White; vhc, Gelder; hc, Briggs. BUFF (6): 1, Stables; 2, hc, Farrar; 3, 4, Gelder; vhc, Rushworth. YELL. HEN (9): 1, 2, Farrar; 3, Hill; 4, vhc, Stables; hc, White; c, Briggs. BUFF (7): 1, 2, Farrar; 3, 4, White; vhc, Rushworth; hc, Hill; c, Stables. NOVICE SECTION: CL. YELL. YORKS. (10): 1, 3, Wilkinson Bros.; 2, hc, Priestley; 4, Crowther; vhc, Greenwood; c, Peacock. BUFF (7): 1, vhc, Laycock; 2, Crowther; 3, Northrop; 4, Peacock; hc, Walker; c, Stobart. TICK, ETC. YELL. (5): 1, Lowes and Whitehead; 2, Dinsdale; 3, Greenwood; 4, vhc, Wilkinson Bros. BUFF (3): 1, Northrop; 2, Lightowler; 3, Dinsdale. YELL. HEN (16): 1, 2, Laycock; 3, Crowther; 4, Stobart; vhc, Peacock; hc, Northrop; c, Barker. BUFF (16): 1, Priestley; 2, 3, Laycock; 4, Northrop; vhc, c, Lowes and Whitehead; hc, Stobart. SELL. YORKS. (12/6) AND HEN (10/6): Cancelled.—H. HILL, Sec.

Rudge-Whitworth
Britain's Best Bicycle

Write to-day for this Book.

By Appointment

No matter what your mount, the 1908 Rudge-Whitworth Art Catalogue will be valuable to you. Its 64 pages describe the latest advances in cycle construction, and illustrate all the exclusive features that make Rudge-Whitworths the best bicycles built.

Write to-day, that you may know more about Rudge-Whitworths, and the reason of their superiority;

The new 64-page Art Catalogue describes 75 models of 1908 Rudge-Whitworths, from £3 15 6 or 7/- monthly. Packing and carriage free. Ten Years Guarantee. Post free from

RUDGE-WHITWORTH, LTD. (Dept. 354) **COVENTRY.**

LONDON; 230 Tottenham Court Road W.C. 23 Holborn Viaduct, E.C. 160 Regent Street, W.

CROOK ORIGINAL C.B.R. AND P.S.

Third annual Table Show was held on Feb. 22, in the club room of the Crown Hotel. The total number of entries was about the same as last year, with a slight increase in the number of birds. The effort was in every way successful, some capital specimens being shown in the different sections. The Society gives every promise of another successful season, already having enrolled and nominated about 20 new members, including three from Darlington. Fanciers are invited to join. Mr. J. Gill, Wolsingham, judged the Cage Bird section.

NOR. (7): 1, spl., 3, Siddle and Dawson; 2, hc, F. Brown; 4, Richardson; vhc, W. Brown. YORKS (14): 1, spl., vhc, c, Siddle and Dawson; 2, 4, F. Brown; 3, hc, Richardson. CREST (3): spl., 2, 3, Siddle and Dawson. MULES (6): 1, spl., vhc, Siddle and Dawson; 2, 4, W. Brown; 3, Richardson. NOVICE PAIRS (4): 1, spl., Rudkin; 2, Hardcastle. SINGLE (8): 1, spl., Richardson; 2, c, Siddle and Dawson; 3, F. Brown; 4, J. Wailes; vhc, W. Brown; hc, Wilkinson. SELL. (6): 1, spl., 3, F. Brown; 2, 4, hc, Siddle and Dawson; vhc, Wilkinson.

WATFORD.

In the Friendly Societies' Hall, on February 22nd, was held the annual pair show of the Watford and District Cage Bird Association. In numbers the entries were slightly in advance of last year, whilst the quality was splendid; in fact, a better all-round pair show we have never seen. This high excellence was attained by the superb display in the Mule and Hybrid section. Norwich were fairly good, as were the Crests, but the Yorkshires were the strongest of the Canary section so far as quality was concerned. The pick of the show was Mr. Quantrell's Goldfinch cock and Bullfinch hen, two charming birds for colour and quality. The veteran Goodall put down a very strong team, and his Linnet-Canary pair attracted much attention, as did his Greenfinch-Canary pair. The birds were very nicely staged, and all the arrangements carried out under the charge of the indefatigable secretary, Mr. Quantrell. Much progress is evidently being made by our friends at Watford, and they are to be heartily congratulated on the high quality of the stock in their possession. Mr. C. A. House judged.

NOR. CHAMPION (2): 1, 2, spl, Goodall, two very typical pairs of grand colour and feather. AMATEUR (6): 1, 2, spl, Shirley, nice short bodies, neat wings and tails, rare feather; 3, c, Scott; vhc, Freeman; hc, Hedgeman. NOVICE (9): 1, spl, Fillyard, very cobby, tight-feathered pair, capital colour; 2, Scar, capital colour and quality, yellow variegated cock and buff hen, the latter a shade long; 3, Wright, nice shape and colour, hardly so tight in feather; vhc, Brandon; hc, Fern; c, Dawes. CRESTS, AMATEUR (4): 1, vhc, spl, best pair shown by lady members, Mrs. Hall, nice clear body, dark crest, and a yellow pair Plainhead; 2, 3, Scott, capital shape and feather, both variegated. NOVICE (2): 1, Brandon; 2, Frost. YORKS., AMATEUR (4): 1, vhc, Field, very nice, stylish, well-matched pair; 2, Shirley, nice quality, hardly so good in head points; 3, Swain. NOVICE (9): 1, spl, two spls, vhc, Buckingham, takes specials for best in four novice classes and 3rd best, buff cock and yellow cinnamon-marked hen, one of the best pairs in the show, and should breed something good; 2nd were very nice in feather and style, but not so slim; 3, Scar, compact-feathered, stylish, buff cock and yellow hen; hc, Field; c, Swain. A.O.V., AMATEUR: 1, 2, Pretty, both very decent cinnamons. GOLDFINCH AND CANARY (7): 1, spl, Pretty, large Siberian Finch of grand colour, and a fine big yellow Lancashire hen of splendid colour and quality, looks a likely hen for muling; 2, 3, Goodall, magnificent British Finch, and a rare quality Norwich hen; this was a tight race, and in size alone were they beaten, for a quality pair they were just immense; 3rd, smaller Goldie and a smart Yorkshire hen; vhc, Buckingham; hc, Tucker; c, Quantrell. LINNET-CAN. (5): 1, spl, Goodall, very handsome well-marked large Linnet of grand feather and grand Yorkshire hen; 2, Quantrell, very rich-coloured Linnet, and another good Yorkshire hen; 3, Brandon, neat shapely Linnet, and a buff Norwich hen of rare feather; vhc, Withers Bros.; hc, Shirley. GREENFINCH-CAN. (5): 1, spl, Goodall, large rare-coloured, tight-feathered Finch, and a beautiful Norwich hen; 2, Withers Bros., big buff Norwich hen of capital shape, and a large tight-feathered Finch of a darker hue; 3, Pretty; vhc, Quantrell; hc, Tucker. A.O.V. FINCH-CAN.: 1, spl, Buckingham, very smart Bullfinch and Norwich hen; 2, Goodall, bonny little Redpoll and a Yorkshire hen. A.V. FINCH AND BULLFINCH HEN (8): 1, spl, and spl best pair in Mule section; hc, Quantrell, very handsome, rich-coloured Goldfinch and Bullfinch, both in superb condition and colour; 2, Tucker, very deep-coloured, grand-feathered Greenfinch and a fine big Bullie hen; 3, Withers Bros., a topping Mealy Redpoll, and a shapely, good-coloured, well-marked Bullie; vhc, Goodall; c, Sear. A.O.V. BRITISH (5): 1, spl, Fern, very smart Goldfinch and Greenfinch, capital colour, shape, size, and feather, a most useful pair; 2, vhc, Quantrell, another good pair, mated same way as winners, and a clinking Siskin with a moderate Goldfinch; 3, hc, Withers Bros., really tip-top Chaffinch, with a Bramblefinch, a well-shown pair. FOREIGN (6): 1, spl, Cooper, well-known pair of Blue Bonnets; 2, Withers Bros., handsome pair of Pekins; 3, Frost, very sweet pair of Waxbills; vhc, Mrs. Quantrell; hc, Goodall. SELL. PAIRS, 30/- (4): 1, 3, Goodall; 2, Fillyard; vhc, Watts. SELL., 20/- (14): 1, spl, Withers Bros.; 2, Watts; 3, Shirley; vhc, Sear; hc, Darvill; c, Goodall.

BEGINNERS; You MUST read the ANNUAL.

A SPECIAL OFFER.

To Users of Fluid Beef and Meat Extracts.

We invite the readers of "CAGE BIRDS" to test for themselves the advantages of the new preparation for making Beef Tea, Gravies, Soups, etc., called Fluid Ju-Vis. Fluid Ju-Vis is Beef strengthened and vastly improved in flavour by the addition of Vegetable Extract. Fluid Ju-Vis is solely a Beef and Vegetable product and contains no adulterant whatever. In Fluid Ju-Vis you get about double the usual quantity for the same money and we are satisfied that you will decide that it is at least equal in quality and flavour, to any Extract you have used. To make Gravies, Soups, Beef Teas at half the usual cost and like them better appeals to every one.

A 2-oz. bottle of Ju-Vis can be bought of Grocers for 6½d., or send 6½d. stamps for a bottle to G. Foster Clark and Co., Maidstone.

CORRESPONDENCE.

RULE 17 ONCE AGAIN.

SIR,—At the annual meeting of the C.B.U. it was considered that if this rule was done away with it would be the downfall of the Union. If that is so, by all means do away with the rule. A Union that cannot exist without coercion surely cannot be necessary. The very presence of the rule shows the weakness of the Union: in fact, it proves that the Union is unnecessary, because if societies will not join the Union unless they are compelled (and Rule 17 does compel societies to join or else hold members' shows only), they evidently are not in favour of the Union. If the Union is coming to an end if Rule 17 is done away with, then the majority of Societies are not in favour of the Union, and it ought never to have existed.

ROBERT HALL.

THE PINTAIL NONPARIEL IN CAPTIVITY.

SIR,—I quite agree with what Mr. Geo. O. Wood said in the last issue of CAGE BIRDS, that Pintail Nonpariels are the most beautiful of all the smaller foreign birds, and delightful in every way as pets. I have had mine over two years and a half, and he has never had an hour's illness. He is always happy, and incessantly uttering his soft little trill. He is, I believe, really fond of me. He moults thoroughly twice a year, in May and October, and gets through the process very quickly, for a few days looking exactly like a half-fledged bird, having no feathers visible, only dark quills all over him. This, I suppose, is the same with all Pintails. But what strikes me as peculiar is this. Directly he had finished his moult last May some of his cage companions pulled out his two long tail feathers. In a few weeks they grew again, but instead of being, as before, dark crimson with dark edges, they came almost white, just flushed with a rosy tint. Of course, I expected that in the October moult they would resume their natural colour. But not so: they again came a pale, pinky white. I should be glad to know if anyone else has had a similar experience. I think they are ideal cage birds if kept in a very large cage or small aviary. My bird is so extremely active, and so light and rapid in flight, that I think he would be neither healthy nor happy in a cage less than about four feet long.

"RADIUM."

THE HYBRID CLASSES AT DUDLEY SHOW.

SIR,—As your correspondent, Mr. T. Johnson, asks for the opinion of other exhibitors in Class 17 at Dudley Show, I certainly think that the Greenie-Bullie should have been wrong-classed; also No. 5, entered as Bullie-Goldie, and No. 6, entered as Siskin-Linnet. Both classes are worded exactly the same, except that one is "light" and the other "dark." Now, I do not think anyone can call either of the above-mentioned Hybrids "light." Perhaps the secretary or some member of the committee can enlighten us as to what the classes were intended to contain, as I think this is a matter that should be cleared up, or light Mules at Dudley will be conspicuous by their absence another year.

J. A. LEES.

SIR.—Mr. Johnson asks in your last issue my opinion of the Dudley Schedule: Class 17, Light Canary Mule or Hybrid. Class 18, Dark Canary Mule or Hybrid. My contention is that according to the reading of these two classes Hybrids could be entered in either, and the judge who wrong-classed a Hybrid in Class 17 would certainly be out of order. Mr. Leigh evidently read Class 17 as correct for his Greenfinch-Bullfinch. I might inform Mr. Johnson that when sending my entries to the secretary of the above show, I asked him to please insert class number on my entry-form, to avoid my entering in the wrong class. A Mule is not a Hybrid, nor a Hybrid a Mule. Where the Canary is one of the parents, it is a Mule; but between two birds of a different genera, say, Goldfinch one side and Bullfinch the other, it is a Hybrid. CHAS. J. WARD.

THE FUTURE OF THE BELGIAN CANARY.

SIR,—Noticing Mr. James Robertson's letter in your last issue on the above subject, one must confess he has opened a question that wants immediate attention, and that needs to be settled once and for all; that is, the question of a decided dividing line between the type of the Belgian and the Scotch Fancy Canaries. While Belgian fanciers are not getting the type of bird they think right to the fore, the Scotch Fancy fanciers have equally as much room for complaint. I am told of a certain judge who was fulfilling his duties at a large open show in 1906. On coming to the Scotch Fancy classes he expressed some strong remarks about the variety, and when he had done his best with these classes, if he had reversed the order of the whole of the awards, that is, had put the first and the first last, he would have been more the mark. We also have to show under judges appointed by committees with little consideration as to their knowledge of our section. Somewhat similar this is to a case of a good Scotch Fancy judge who placed the tickets at a small affair over the Border. After he had finished his Scotch Fancy classes he was about to leave, when the secretary told him he had not finished his duties; he had to judge the foreign class, and strongly protested against it, declaring he knew nothing about common ones. But being his duty he was expected to do it. The first bird in the foreign class was an old grey, a good talker, who exclaimed, on the judge approaching, "Good morning, No. 1." After looking over the class the old grey stuck to his speech, "Good morning, No. 1," to which the judge exclaimed, "You win No. 1." Afterwards some strong remarks were heard re this award, but the judge "liked the parrots." Strict to his views, he said, "It was for talking I judged, and No. 1 was the only bird who has said a word, and therefore won easily." I don't suggest that Belgian or Scotch Fancies talk, but I do feel that at some shows judges undertake the duties with little knowledge of these varieties, and this is where we as a specialist club, have been neglecting our duties of educating the judges, by not being able to clearly place our views as to type before them. This applies more to the Scotch Fancy Club, as at present they are like a ship without a rudder, having no standard at all. Personally, I have suggested to Mr. Cobb a joint meeting of the Scotch Fancy and Belgian Clubs might be held with advantage to both varieties, to discuss this question, as I personally believe this to be the best means to settle this question. Once a clear understanding is arrived at each club could work for its object. I am sure our members wherever possible would be pleased to attend such a meeting any Thursday evening, say in Leeds, as central for all, and at the same time I would be pleased to put the views of such meeting before members not able to attend. This is a right good opportunity, as the model and standard question is now under consideration. Now, Mr. Robertson, we don't want to be, as you suggest, lost in the wood, or like the lost Babes in the Wood, and I think this would be a means to an end.

J. HARRISON, Hon. Sec. S.F.C.C.

A STANDARD SHOW-CAGE FOR BRITISH HARDBILLS.

SIR,—I have read with interest the letter under the above heading, and I might say that I agree with all your correspondent says; but most particularly with the sentence that reads: "A great number of Fanciers make their own show-cages." I think he has hit the nail right on the top there. Can't he see—can't anyone see with half an eye—that that is where the boot hurts? I had a notion from the first that it was a trick of the trade. They (the trade) want to alter the pattern so as to have a monopoly, knowing that Fanciers can't make them with a bow top themselves. But I hope the National British Bird and Mule Club will stick to the original pattern, although I admit they ought to be uniform. They could be made all one pattern, but in different sizes: For instance, one size would do for Goldies, Linnets, Twites, Redpolls, and such; a bit larger for Greenies, Bullies, etc.: larger still for Brambles, Yellowhammers, etc.; and the largest for Hawfinches and Crossbills. But I hope the National British Bird and Mule Club will go further, and make the cages for Mules uniform at the same time.

ANOTHER BRITISH BIRD FANCIER.

SIR,—Seeing a notice in last week's CAGE BIRDS that the National British Bird and Mule Club will have under consideration at their next meeting a standard show-cage for exhibition Hardbills, and that cage makers are invited to send a specimen cage in the style of the bow front, and being a member of the club, I hope members and exhibitors will let me make a suggestion on the subject. The wire top, I think, is one of the worst; every exhibitor who visits most of the shows knows that nearly all of them stage the cages one on top the other, and that the seed, with dust and water, will drop on the exhibit below, and perhaps spoil it for good. For instance, when my birds came back from Plymouth, Bristol, etc., the cages on top were thick with dust and spotted with water, so that if we had the bow front the bird would get all this. Also, a good few of our exhibitors in Cornwall are working-men, and make their own cages, which is a credit to them. So I think if we keep to our box pattern it would be better for all Fanciers. For myself, I should like to see a standard club cage with the loose front, neat, fancy, round perches, screwed from the back, with the inside and wires enamelled a nice shade of green and the outside black. Then the fancier could get one and make them to match. However, I hope members will express their views, through your valuable paper, CAGE BIRDS, which we look forward to every Friday.

F. COLLINS.

HAWFINCHES AT THE PALACE SHOW.

SIR,—Permit me to inform Mr. Gilmour that the gentlemen engaged as judges at the Palace Show are gentlemen whose principles and actions are above suspicion, and if his concluding paragraph is meant to imply that Mr. Hills did not judge the Hawfinch class honestly, I can assure him that he has made a most serious mistake, and owes Mr. Hills a full and ample apology. J. W. RAMSDEN.

We quite agree with Mr. Ramsden that if "dishonest judging" may be inferred, —or is intended to be inferred—from Mr. Gilmour' letter, then an apology is due to Mr. J. F. Hills. We say at once that had we thought any such construction might be placed upon Mr. Gilmour's letter, or any sentence therein, it would have found no place in our columns, for none respect Mr. Hills more than ourselves, or have greater confidence in his complete honesty of purpose.—EDITOR.

SIR,—I am sorry to see a Scottish exhibitor at the Palace, in the person of Mr. Gilmour, of Sinclairtown, writing such a letter as appears in CAGE BIRDS of February 29th. Mr. Gilmour asks for information regarding the show type of a Hawfinch, and then suggests that he knows all that is worth learning about one. He says: "Officials select judges to do their duty and have no control over the awards they give." A pity it would be, too, if they had. "Past reputation." What has this to do with the case? No good judge pays any attention to past reputation, but makes the awards as he thinks fit. Mr. Gilmour says he examined Mr. Axe's bird "fair and square," at the Scottish National Show, and did not consider him a crack. But then, no one has suggested, save Mr. Gilmour himself, that he is a judge whose opinion can be relied upon. He also complains that the National winning Hawfinch was left cardless at the Palace after having topped the list of all hardbill classes at Scottish shows this season. I suppose he forgets already about Bathgate show, where the bird was commended, I think, and another Hawfinch second and special for the best one in the class; or he may say that this was a variety, and not a hardbill class. Then, again, Mr. Gilmour says: "Mr. Axe wanted to purchase the winner at the National show." But I am quite sure many a fancier has more money than sense, and I have known fanciers of long standing, and who were conspicuously successful as exhibitors, who have rued their bargain after making a purchase. The reflection cast upon the judges by Mr. Gilmour is scarcely worthy of notice, unless it be to say that someone who was not "in the know" at the Palace may have been so at the Scottish shows. I would suggest that Mr. Gilmour takes his beating like a sportsman, and when he gets a "knockdown" let him come up again smiling and ready to try to do better in future.

SCOTTISH HAWFINCH.

SIR,—Your reporter in his notes on the class draws attention to the fact that the Scottish National winner failed to get even a ticket, but does not suggest it should have been in the money at the Palace. I hope he will now give his opinion on the bird, and also state whether he considers the winner in the class to be as Mr. Gilmour says—"poor colour, no shape, no size"? Mr. Gilmour, I am afraid, is suffering from same defect as his Hawfinch, "going light in the head," or he would not make such an unjust attack upon two gentlemen, both well known and respected in the Fancy, whose actions are above suspicion (except, perhaps, to a disappointed exhibitor like Mr. Gilmour).

A. K.

SIR,—I was very pleased to read Mr. Gilmour's letter re the above. When I received my catalogue from the Scottish National, I was rather surprised to see my Hawfinch standing second. I said to myself, I should like to see the winner, because I knew the bird that could beat mine would be worth seeing. A week or two after Mr. Gilmour's Hawfinch was depicted in CAGE BIRDS. When I saw the sketch, I was confident that if that were a true sketch of the winner (and Mr. Gilmour said it was), it could never beat my bird (unless it was down in condition), under a specialist British judge, one that could judge shape, condition, colour, and size; not a judge who, when he has two good birds before him, cannot decide which is the nearest to perfection. Mr. Gilmour says he examined my bird "fair and square," and at that time did not consider him a crack, by any means. Now, I should like to ask Mr. Gilmour what he considers a crack? He says my bird's colour was poor, and "no shape or size" to compare with his bird. I was at the Palace Show on the Monday, and had a good day among the British. I went through the Hawfinch class and examined each bird very minutely. I feel confident that after what Mr. Gilmour says about the Palace winner, he is no judge of shape, colour, or condition. I will take the word of many well known exhibitors (some who had Hawfinches in the same class) that the winner was far and away the best in the class. Never mind what the reporters said about him; I take no notice whatever of reports, unless I know the reporter is an authority on British. The first time I saw this Hawfinch was at Derby (shown by Mr. Hakes, of Burton-on-Trent). I compared it with the winner, and I came to the conclusion it was a far better bird than the winner, but it was thick and out of condition. In fact, several of us thought it was going to die. The next time I saw it was at Ilkeston. It stood second to my Chough (I wrote to Mr. Hakes to see if he would sell it). The next time I heard about it was at the Palace, 1907, when it stood first, beating the bird that beat it at Derby. One exhibitor was going to claim it, but his brother advised him not to, because he did not think it was acclimatised—and yet it was caught near Burton-on-Trent! So it went back to its owner. The next time I saw it was at the last Nottingham Show, taking first. I made up my mind at once that I should not let it go away from Nottingham. I claimed it, as everybody knows. I sent it out to ten shows under different judges, and it won eight firsts and specials, one second, at Derby, beaten by a yellow Bunting (under Mr. Robson), and second at the Scottish National, where it was claimed for £10 10s. by a Mr. ——, of Doncaster. But it soon came out in Mr. Axe's name. It has not been beaten by a Hawfinch during the show season 1907-1908, except by Mr. Gilmour's, so I think that is a good record. I wonder whether Mr. Gilmour's has gone through the season without being beaten by a Hawfinch? I will say this much, there was not a bird at the Palace in any of the classes that could beat it for shape or condition. It could not be better if an artist had modelled it in clay. It is perfect in shape. Now, I will throw out a challenge to Mr. Gilmour, to see if he can remember the points of the Palace winner, which he examined "fair and square." Will Mr. Gilmour tell me where his bird beat it, and I will tell him where the Palace winner beat his? I will back my ability to judge for shape, size, colour, and condition against Mr. Gilmour, and I will leave it to exhibitors (who know what an exhibition Hawfinch ought to be), those who saw it at the Palace and those who saw it at the Scottish National, to say who is the best judge. Before other exhibitors state their views, I trust if there is any discussion to follow it will be for the benefit of the Fancy, and that those who take part in it will sign their names in full; then we can take it for what it is worth. If Mr. Gilmour would like to test my ability further, I will be pleased to tell him the good points and the bad points of all the Hawfinches that were in the money, then he will see that when once I have seen a bird I do not forget it.

HERBERT J. CHICK.

PROPOSED PROVINCIAL ROLLER CANARY CLUB.

SIR,—A meeting will be held at the Swan Hotel, Fountain Street, Manchester, on Saturday, March 7, at 5.30 p.m., for the purpose of forming a Provincial Roller Canary Club. All persons interested in these birds are heartily invited to attend.

ARTHUR FOULDS.

THE YORKSHIRE CANARY CLUB OF IRELAND.

SIR,—The report of committee meeting furnished you by the secretary, and published in CAGE BIRDS, February 29th, is decidedly misleading to the absent committee members and the general body of members, who carefully watch your journal to see what takes place at the club meetings, as same is the only notification they can get. The secretary reports receipt of 20s. from Mr. Barclay, J.P., but carefully omits to mention that in the same letter Mr. Barclay requested to have his name withdrawn as vice-president, and remain on as an ordinary member. Mr. Barclay is a far-seeing man, and I make no further comment at this stage. With regard to my resolution to separate the challenge cup points from the colour and non-colour fed classes, instead of bulking them in the whole, this was to show where points were gained in such classes, where there was an ordinary amount of competition. The correct points are:—C. A. O'Reilly, 86; J. J. Cloke, 81; Sheridan and Fry, 23, for colour-fed classes. Messrs. Sheridan and Fry claim the cup by having nominated birds in the non-fed classes, and thus gained 86 points extra in classes where there was practically no competition. Members will see from this why there were so many non-colour-fed classes at the Irish shows for this season, some of the said classes having been guaranteed by the secretary personally, where the show secretaries could not see their way to grant non-colour-fed classes, and thus Messrs. Sheridan and Fry could keep up their points at these shows. Perhaps the cup next year will be gained for the third time in tail-fed classes.

RICHARD DEVITT, Chairman, Y.C.C. of I.

A LINNET SINGING CHALLENGE.

SIR,—Seeing that a Hull correspondent has sent a challenge through your most valuable paper, I must say that I sent my challenge to the fancier who represents himself the "Champion of all Champions," and I sent to Leeds alone, as they don't sing our way in Hull. They sing on the shelf; we sing in the window. If they will sing quality singing, I daresay they can get a match on to sing in the window, and sing the best bird of one hour's singing, not the best monthful, as that is no way of singing, as a bird could break with a good round spring singing, and then sing all bad singing for the remainder of the time.—T. Summers, hon. secretary, on behalf

C. BISS.

WHERE DOES THE COLOUR COME FROM?

SIR,—Re above, "Past Novice" asks where colour comes from? This question has been answered by about almost every well-known breeder of Canaries who breeds for colour. They all advocate green-marked birds. When "Past Novice" can tell me where the Cinnamon mark originated, I will tell him where the Green marks originated. Where do the best Greens come from? is a question which is in everyone's mouth—Liverpool, of course. There are a few good birds bred outside Liverpool, but ninety-five per cent. are bred in Liverpool. How they were bred I think I explained in my article on the Green Canary. It is very good advice "Past Novice" gives to the novice. I hope they will take the hints referred to. We in Liverpool have seen these Greens from the Cinnamon rooms. J. W. METCALFE.

AN ALLEGED MISLEADING ADVERTISEMENT.

SIR, I notice a George Cubley using my name, along with others, under heading of Norwich Canaries in your valuable paper. I wish to state that I have had no dealings with this man. I also wish to warn breeders not to buy birds from him expecting to get my strain, as his advertisement is most misleading. I also wish to warn the said George Cubley not to use my name in any future advertisements, or I shall take proceedings against him at once. JOHN TRENGOVE.

SIR,—My attention having been called to an advertisement in CAGE BIRDS by a "George Cubley," of Roman Villa, Long Sutton, stating that he had recently sold birds to several leading Fanciers, including Baker, permit me to say that never to my knowledge have I ever bought birds from or sold them to "George Cubley," so that the birds he sold to a Fancier by the name of "Baker" or those he advertises for sale have never been bought from or sold to me. As I consider this a most unfair way of making use of Fanciers' names, I shall not hesitate to make him prove any further statements he makes of selling birds from my noted strain.

Cowes, Isle of Wight. E. BAKER.

BORDER FANCY CANARY CLUB AND ITS JUDGES.

SIR,—Will you kindly accept a reply to Mr. Paterson's letter, which appeared in your paper on 29th February? I am sorry he is against the rule passed at Edinburgh on 1st January—that of restricting members to judge two shows. I think this quite fair. Just look at the honour we will have if we can win under 12 judges or so, instead of according to common practice, one judge. This keeps many a person from showing, as they know so and so's birds will be present. In my opinion it will help entries greatly should all the popular judges be engaged. Mr. Jamieson, secretary of the B.F.C.C., is always willing to advise. I don't think societies need be at much expense if they only write to him. We have nearly 300 members. Surely we will find plenty of good judges in that number. I trust this rule will be given a fair trial, as the more judges the greater the honour. WM. TURNBULL.

SIR,—Having noticed Mr. Patterson's letter on the above subject in your last week's issue, will you kindly allow me space in your valuable paper for a few words? I, like Mr. Patterson, was not at the general meeting of the club on 1st January, but on hearing that this rule had been passed, and that almost unanimously, I was, and am still, of opinion that it is a step in the right direction. I have not yet met a single member in Edinburgh interested in the above club that had a word to say against the passing of this new rule; in fact, quite the opposite. Mr. Patterson says he has heard from a few of his fellow judges that they will judge as many shows as they think fit, and either resign membership or let the club expel them. That does not say much for any man after becoming a member of a club, when he cannot fall in with the majority and abide by their decision. In my opinion, such a man is not working for the interests of the club, but for his own. I don't think any serious difficulty will be found in getting good men to judge, as there are dozens of men in the B.F.C.C. who only want to be taken out, and who know as much as some of the most popular judges as to what a Border Fancy should be, and I have no hesitation in saying that it will be to the advantage of the society seeking the club's patronage to engage them. It is nonsense to say that the Scottish National would get nothing but novices to place the awards. As far as I know, the Scottish National members have their judges elected in good time, and have a better chance of getting men to suit them than many of the smaller societies. As the rule has been passed at a time when most Fanciers were on holiday, and a larger number of them could not be got together, I think the secretary is quite right in not calling a special meeting to suit half, or even a dozen members.

JOHN WELSH.

ROLLER CANARIES AT THE PALACE SHOW.

SIR,—Reading Mr. Whittaker's letter reminded me very forcibly of an occurrence which came under my notice some time ago. Whilst listening to my birds, which were in full song, one of them suddenly brought out the "Gobble, gobble!" of the Turkey, and repeated it quite plainly many times. I never heard it again, although I kept the same bird for over two years after. If this tour, which had been bred out for several generations, should suddenly appear in the manner named, I would like to ask Mr. Whittaker and other Fanciers if it is not possible, in the excitement of the moment, Mr. W.'s birds brought out this Auf-zug and sharp whistle? and afterwards dropped them again. I can safely say that my birds, after being at the London Shows four and six days, came home very wild in their song, and are more faulty than when I sent them.

ANDREW PERCIVAL.

SIR,—In reply to Mr. Rettich's letter in last week's number, I must ask why it does not read same as letter sent to me by post from our secretary, as in that letter it states that Mr. Rettich has handed him £1 1s. for expenses, presuming that I send the bird and pay a similar amount. My reply was: "It don't suit me." Now Mr. R. will not accept a money challenge, or "stake his reputation on a Roller's vagaries." Well, I think every Roller Fancier knows that once a bird begins to do an aufzng and a sharp whistle, he will never cease. So what could be nicer than seeing me pay 21s., with the risk and expense of sending the bird, and then when he did not do it, you would, by the use of the "Roller's vagaries," still maintain your reputation, and stick to it that he did it at the Palace. Not me, Mr. Rettich, thank you. We don't do things like this with our money in Lancashire. But the bird shall be heard in public on Saturday next, as a meeting has been arranged at the Swan Hotel, Fountain Street, Manchester, for the purpose of forming a Provincial Roller Canary Club, at 5.30 p.m. The bird will be there, and after the meeting any person desirous of hearing him sing can do so with pleasure. Every Roller Fancier will be welcome. In reply to Mr. Norris, in the same issue, I don't see where the "pity me rushing into print" comes in. He must not think that no one knew I had written to your valuable paper until that became public on the following Friday; therefore they had a full week to accept my £20 challenge, as had it been taken up before that time it would have been accepted. Re my other challenge, I do mean business, and on Tuesday last I posted Mr. Norris a money-order for £5, but as yet it is not covered. I have no reason to alter what I have said, but the matches must be for no less than a side bet of £5, each to pay half the expenses, or the loser to pay the lot. W. WHITTAKER.

BELGIAN CANARIES AT THE PALACE SHOW.

SIR,—I should like to explain my reason for protesting against Captain Philps' Belgians at the late Palace Show. My main object was to prevent such an occurrence in the future, as it appears to me that under the present rules of the L. and P. O. S. and those of the Cage Bird Union, an exhibitor who chooses to take an advantage of others may do so without any penalty falling on him. I think that all show secretaries and the Cage Bird Union should either make a rule to prevent a bird being shown in more than one class at one show, or they should state we may enter one bird in as many classes as it is eligible for, and so prevent such competition (in my opinion, unfair competition) as took place in the Belgians' class at the late Palace Show. Personally, I am strongly in favour of one bird one class, as I consider it will greatly injure the Cage Bird Fancy to allow one bird to be entered in more than one class at one show, as it does not give the best in the class its rights.

G. S. BAKER.

Have you given the notice respecting CAGE BIRDS' ANNUAL for 1908 your attention?

THE YORKSHIRE UNION AND THE CAGE BIRD UNION.

The Question of a Working Arrangement.

SIR,—Assuming that the report of the Cage Bird Union Annual Meeting, held in Manchester on February 22nd, is correct, I feel that the time has arrived when I am compelled by circumstances to enter a strong protest against what cannot be considered otherwise than shabby and ungentlemanly treatment of myself at the hands of Mr. Lythgoe, at the same time casting undeserved reflection upon the Council of the Yorkshire Union. I sincerely trust that such treatment has been unwittingly dealt out, and was simply the result of temporary forgetfulness of the true facts of the case. I wish, with your permission, to place before the members of both Unions, and, in fact, Fanciers generally, my reasons for feeling somewhat annoyed at the recent turn of events. I will only refer to that portion of the report which directly concerns myself and the Union I have the honour to serve, and which deals with the subject matter of this letter, as shown in the heading. A delegate, Mr. Curtis, asked—"Why cannot you approach the Yorkshire Union and work together—give an exchange of privileges to each other—that our members be allowed to show at their Union shows, and their members be allowed to show at ours?" Mr. Lythgoe replied: "I have tried to come to an understanding with the Yorkshire Union, and have been in communication with the Secretary, Mr. Hammond, but they have wanted their rules to supersede ours, so no arrangement under these conditions could possibly be come to."

To this reply I beg to offer an emphatic and unqualified denial. In the first place, neither Mr. Lythgoe nor his committee have ever, to my knowledge, officially approached the Yorkshire Union Council or its secretary on any matter bearing on this subject, neither has the Yorkshire Union required that its rules should be observed at any other than its own Union shows. If Mr. Lythgoe has in mind a letter he addressed to me privately last September, and has based his reply to Mr. Curtis on the answer I sent him, I beg of him to call to memory the circumstances under which he wrote that letter, and also the injunction that I should treat it as "private and confidential." Until now I have considered myself in honour bound to do so, and consequently it has never been brought to the notice of the Yorkshire Union Council. The situation is now changed, and, after Mr. Lythgoe's statement, nothing satisfactory can be explained without the publication of this letter and my reply to the same. I therefore beg to submit them herewith:—

(COPY OF MR. LYTHGOE'S LETTER.)

THE CAGE BIRD UNION,
25, Stamford Street,
Old Trafford,
Manchester,
Sept. 22, 1907.

Private and Confidential.

Mr. Fred Hammond.

Dear Sir,

I was pleased to see your announcement the other week as to Yorkshire Union shows being allowed a free hand in applying for the C.B. Union's patronage.

I have been intending for some considerable time writing you to ask if some arrangement could not be come to between the two Unions to each recognise the other's suspensions, etc.

I shall be glad if you would let me have the names and addresses of the secretaries of all the Y.U. Clubs, with a view to asking them to obtain license for their shows.

There is no doubt that it is a hardship on many Societies around Yorkshire that their members are debarred from exhibiting at the Yorkshire Union shows because not licensed, and also must have some effect on these shows' entries, and I think for the sake of the 5s. license fee, which would be repaid with three or four entries, they would be favourable to obtaining licenses.

The only point of difference would arise from the fact that your rules must prevail over all others at these shows, but in my private opinion I think your Union, being the older one, and exists only through the Societies forming it, the C.B.U. might give way on this point, and also recognise any suspensions the Y. Union may make, you doing the same by us.

I should be glad to have your views on this at your early convenience, so that, if possible, some arrangement may be come to between the two Unions before the show season opens.

I am not authorised by my council to make any suggestions, and trust you will treat this as confidential, but I hope I may be able to put some suggestions to the council on hearing from you.

Yours faithfully,
(Signed) GEO. W. F. LYTHGOE.

(COPY OF REPLY.)

70, St. Margaret's Road,
Bradford, Sep. 23rd, 1907.

Dear Mr. Lythgoe,

Yours of the 22nd received this noon. So far as the Societies forming the Yorkshire Union are concerned their policy has ever been that of the "Open Door" as regards entries of exhibits at their winter shows. No one is debarred unless under suspension for some cause or other. Of course, they recognize the right of the C.B.U. to regulate their own affairs as seems to them best, and, whatever be their motive or object in prohibiting their members from exhibiting at unaffiliated or non-licensed shows, it is altogether outside the province of societies holding such shows to complain. Their right is to pay whatever fee you demand according to your rules if they desire the patronage of your members, and it was for the guidance of any such Yorkshire Union Society that the matter was brought forward at our last Council meeting. The resolution then passed, to which you refer, simply affirms the position the Yorkshire Union have invariably taken up. The societies forming the Union are at liberty to apply for any patronage they desire, providing same can be accepted without an infringement of the Rules of the Union. A comparison of these with those of the C.B.U. immediately reveals the fact that they seriously conflict with each other in the matter of which should be supreme in the case of a Yorkshire Union shows holding a C.B.U. Licence. I feel sure you will readily concede that the great humiliation and loss of self-respect which the Yorkshire Union Council would bring upon itself by allowing an affiliated society to place the Union rules in subjection to those of any other Union is more than any sane man would contemplate.

If (as in your private opinion you seem to think) the C.B.U. would give way on this point, and allow Yorkshire Union shows to be governed entirely and absolutely by the Yorkshire Union rules, the resolution of our last Council meeting gives me authority to state that the way is clear for any of our Societies to apply for the C.B.U. Licence. Given such an assurance from the C.B.U. I can see no reason why their licence to the Halifax Society should be cancelled, and would be pleased if you could re-assure your members on this point in this week's Press, seeing that entries for their show close on Tuesday of next week. But, I am afraid, it may be too late for you now to make the necessary arrangements in this case.

Regarding the two Unions recognizing each other's suspensions, I may say that, personally, I am in favour of such a step being taken, and am quite prepared to place the matter on the agenda for the next meeting of the Council should other matters so mature as to call for serious consideration.

With kind regards and assurances of my deep respect, I am,

Yours very faithfully,
FRED. HAMMOND.

P.S.—It is quite an oversight on my part that you have not been furnished with a copy of our Year Book. I fully intended sending you one. You will find each secretary's name and address therein.

Mr. G. W. F. Lythgoe,
Secretary, The Cage-Bird Union,
25, Stamford Street,
Old Trafford, Manchester.

A few of the points to which I wish to draw particular attention in Mr. Lythgoe's letter are as follows:—

(1) Its personal and private character, as evidenced by its heading and the last paragraph, thus effectively preventing me from replying in any other than a personal sense. How could I treat it privately and confidentially and at the same time divulge its contents to the Council of the Yorkshire Union?

(2) His request for information as to whether some arrangement could not be come to between the two Unions;

(3) That the only point of difference would arise from the fact that Yorkshire Union shows must be governed by Yorkshire Union rules, and

(4) That, in his private opinion, the Cage Bird Union might give way on this point.

To the last three points I would ask your readers to apply that portion of my reply which is printed in italics. What more can be desired or expected from me as a private individual in answer to a "private and confidential" communication? So far as I am concerned I have not altered my views one iota since September 23rd. I am just as anxious as Mr. Lythgoe seemed to be that the two Unions should work harmoniously together if possible. I infinitely prefer peace to discord—but it must be peace with honour. I am quite willing to-day, as then, to place before my Council any suggestions which the Cage Bird Union care to make officially, but I cannot stand aside and allow the blame for the present estrangement to be placed on the shoulders of those who have not deserved the punishment such a burden incurs. I quite frankly and honestly admit that since replying to Mr. Lythgoe I have daily been expecting a communication from the Cage Bird Union giving an outline of some suggested "working arrangement" between the two Unions. Seemingly, I have hoped in vain—at all events, up to the present; but my object in writing this letter is an attempt to show Mr. Curtis and gentlemen similarly minded that the Yorkshire Union and its secretary are not so blind and indifferent to the truest interests of the Fancy generally as Mr. Lythgoe's statement would imply.

FRED HAMMOND.
Hon. Secretary Yorkshire Union C.B.S.

PROPOSED NEW SOCIETY FOR MANSFIELD AND DISTRICT.

SIR,—We are about to start a new society in Mansfield, to be held at the Greyhound Hotel, contributions 3s. per year. Will any one wishing to join send in their names to me at 12, Herbert street, Mansfield, or to Matt. Shachlock, Greyhound Hotel, Mansfield. JOSEPH SMITH.

STANDARD LENGTH OF THE YORKSHIRE CANARY.

SIR,—In thanking Mr. Elsmore for the courteous and manly withdrawal contained in his letter of last week, I would like to say that Clause 2 was proposed, seconded, carried, and confirmed by Yorkshiremen at meetings held in Yorkshire. Further, that at the time when the standards were drawn up and adopted, birds were measured from the tip of the beak to the end of the tail.

C. A. HOUSE.

Several Letters unavoidably held over.

The Novices' Notebook.

This page will consist of topical hints, addressed chiefly to beginners, concerning every branch of the hobby of bird-keeping, and the notes will be contributed from time to time by various leading experts.

(*Continued from page* 231.)

To Complete the Roof.

The roof of this structure being of only half-inch wood, there is a great risk of its getting warped by heat and wet. If another layer of half-inch wood could be superimposed over this at a distance of about three-quarters of an inch or one inch, it would make a vast improvement, and not only form a protection to the real roof, but will indirectly make a great improvement in the room itself by keeping it cooler in the hottest part of summer, and the temperature more equable at all times. By this, of course, is meant that the superstructure should be supported by strips of lath nailed down to the roof at each end, with an extra similar support at a distance of about eighteen inches across the full width of the roof. Thus there will exist an air-space of the thickness of the supports used between the two roofs, and the existence of this space, providing an egress is left at the top, as there should be, will cause a current of cool air to be always circulating between the two layers of wood when a hot sun beats fiercely upon the top, and the atmosphere in the house itself escapes being overheated.

Where this is not considered expedient, the existing roof of wood should be well tarred, and then covered with a layer of roofing felt. Two or three coats of tar should next be given the upper surface of the felt. Each coat should be allowed to become dry before another is applied. This will ensure the roof being waterproof for some months at least, and if care is taken to repeat the tarring once or twice a year, and a gutter made and kept in good order along the eaves, it will form a most useful roof permanently, and the tarring will do some little to keep the roof cool during the sultry weather. The plan of tarring and felting the top surface will also prove most advantageous in cases where a double roof is constructed. It costs comparatively little, and its advantages are so great that it is very advisable to carry it out in all cases.

To make the Window Secure.

The window would be the next item to consider. As the window in the shed in question is very large in proportion to the total area of the frontage, it calls for particular treatment; but in all cases, whether large or small, it is a wise policy to deal with windows in the same way. That is, to nail securely over the window-space on the outside a piece of half-inch mesh wire-netting, and to hang a similar piece over the window-space inside. If the window has a sash to slide up and down, it would be well to allow the inside cover of netting to hang loosely, or, at any rate, to arrange it in such a way that it may be easily removed or turned aside to allow access to the window to open and close it in warm summer weather. But the outer covering should be permanently secured. It may be considered rather unnecessary to use two wire covers. Both have their especial use, however. The outer one not only keeps prowling cats and other predacious animals and birds at bay, but is a great protection against stones which may now and again be hurled at the window by mischievous boys, and the inner wire will often prevent a bird stunning itself by dashing violently against the window-pane when alarmed. The two wires also form a fairly secure safeguard against cats if the window should happen to get broken when no one is at hand to repair the mischief, and whilst the sashes are open for free ventilation.

A Safe Door.

When the birds are going to fly loose, as was suggested in the case submitted (being fully exposed out-doors), the necessity for making the door perfectly safe for the ingress and egress of the owner is of the greatest importance; otherwise, if this item is neglected or improperly carried out, some day the owner will be chagrined to find a bird—as likely as anything the best in the room—deftly pop out over his head as he is making an entrance for himself, and although the chances of its recapture are fairly rosy if one keeps cool and avoids making a mad rush for it and scaring it beyond all sight and sound of the remaining inmates of the bird-room, there is as a set-off a great risk of the bird contracting a severe chill, particularly if the day chosen for the expedition should be a cold or wet one.

A kind of porch before the existing door may be made by fixing up a piece of half-inch mesh netting, eighteen inches or two feet wide—the actual width must depend chiefly upon the space available, and perhaps, let us whisper it, the cubical stature of the owner. Having fixed this on to a light frame of wooden strips, proceed to make a similarly light door of wire and hang on to the front of this improvised porch, and you will then have two entrance doors to the room, with a wire enclosed space between them of the same depth as the width of the wire used to surround the actual door. Then, when entering the room, you have only to be careful to close the first wire door behind you before the inner door is opened, and—well, there you are.

In a large room this second door might be built inside the room, but in small places where all the space inside the room is required for the birds, it would be better to make some sacrifice externally in order to make it on the outside. A simpler and more primitive plan where this suggestion cannot for some reason be carried out, is to fix a curtain of coarse canvas all over the door on the outside, and a couple of feet or thereabouts larger than the door. This should be hung loosely enough to allow the owner to stand behind whilst opening the door, and as it cuts off the daylight whilst the door is opening, the birds will never make a dash in that direction, as they will be found when alarmed to invariably make a rush for some point where daylight is seen. It is, of course, necessary to make the curtain secure top and bottom to prevent its blowing about in every breeze. A little ingenuity will enable anyone to make such a cover with a couple of old sacks, and also to rig up a contrivance to make the curtain run on cords at the top and bottom, after the manner in which the housewife suspends her curtains.

The Internal Arrangements.

The converted shed will now be ready to furnish as a bird-room, and will prove as useful for all ordinary purposes as the most complicated and costly structure. For general breeding purposes with the birds flying loose I should be greatly tempted to fit it up inside with natural bushes secured to the walls in the same way as was described in the primitive bird-room at the beginning of these notes. But the plan of the other arrangements I should modify—or perhaps I had better say elaborate—in this way. The floor I should cover with a few barrow-loads of builders' sharp sand, spreading it a depth of at least an inch all over, or otherwise with a mixture of equal parts of sand and coarse-cut pine sawdust. The latter has the advantage of making the room always smell sweet and wholesome, and removes the musty birdy smell which is apt to pervade small enclosed spaces wherein a number of birds are kept month after month. And its absorbent nature is always a useful aid in keeping the floor dry where there exists the least tendency to dampness. Indeed, if the locality had the slightest tendency to dampness, I should make a point of always keeping a good proportion of sawdust mixed with the covering on the floor.

A very shallow box or wooden tray filled with old mortar pounded up finely should be kept in one corner throughout the spring and summer. It would, in fact, form a useful adjunct the whole year, but is of far more importance at the time named. For perches a supply of spars may be placed across the room in various positions above the level of the head, so that one can walk about without butting them down continuously. For the remainder, the twigs of the bushes round the walls, and a few suitable small branches trimmed into the shape of miniature trees, and stuck in pots or small boxes of soil, or even nailed on to small blocks of wood, to form a base for them to stand upon, may be placed at intervals about the floor.

Here it may be remarked that if these manufactured "trees" are stuck in soil for support, the soil may be utilised serviceably in another direction, by occasionally raking a few pinches of mixed bird-seed into the surface and keeping it slightly moist. It will grow rapidly in such a situation, but not quick enough to make any headway against the attacks of the birds, who will clear it off as fast as its first green shoots put in their appearance.

The Refectory.

In the centre of the room a small table may be improvised with three deal boards about one yard long, neatly joined together edgewise, and nailed on to a cross-piece at each end; and the board will then be somewhere about thirty-six inches long by thirty inches wide, supported upon trestles at a convenient height for placing food, etc., upon, say, about two feet six inches or thereabouts. This, when placed near the centre of the room will have the full advantage of the light from the the window.

On this table all the food should be placed, and in order to prevent quarrelling it will be advisable to keep at least two seed hoppers, soft food dishes, and water vessels. The first and last-named should be of the self-supplying type, to prevent both waste and the soiling of the food and water. The seed hoppers ought also to be sub-divided into separate compartments for the different kinds of seed used, as this will prevent the birds throwing out good seed and wasting it. Two self-supplying fountains should be provided, and three or four small shallow china pans for the moist food which will be in use during the breeding season—either the usual egg-food, or any substitute that may be preferred—and such other things as soaked rape seed, and crushed hemp, and a few flakes of cuttle-fish, will complete the furnishings of this bird-table.

(To be continued.)

BEGINNERS BUDGET.

Are you starting Canary breeding? If so you will never make a better investment in your life than by purchasing the following—

	Post Free.	
Canary Breeding for Beginners - By Claude St. John. *Illustrated.*	**7d.**	THE LOT POST FREE **2/-**
House's Canary Manual - - - *Illustrated.*	**1/2**	
The Stock Book. (Our Invaluable "Breeding Room Register.")	**7½d.**	

SEND THAT 2/- P.O. AT ONCE.

A Postal Order for 2/6 will bring you CAGE BIRDS 1908 ANNUAL in addition.

F. CARL, 154, Fleet St., London.

NOW IS THE SEASON. BUY THE STOCK BOOK.

The Latest Publication for the benefit of keepers of cage birds. Is framed on novel lines and contains many entirely new departures. Is absolutely indispensable to everyone interested in the hobby.

COMPILED BY G. E. WESTON.

MAKES BIRD BREEDING EASY.

This "BREEDING ROOM REGISTER & BIRD KEEPER'S ACCOUNT BOOK (copyright) offers in a handy form a means of keeping—

The complete pedigree and description of every bird in one's room.
A full record of the season's breeding experiences.
An account of every young bird reared, and how it was disposed of.
A register of one's doings at the shows (the most complete and useful yet devised).
A cash account for the year.
A profit and loss account of the season's proceedings, and a balance sheet showing how much one has invested in the hobby.

A series of Registers will thus furnish a concise record of the career of a fancier as a breeder and an exhibitor from year to year, or over any number of years.
Many useful Emergency and other Hints will also be found in its pages.

Price 6d. from any Newsagent, or 7d. (postal order), post free from THE MANAGER, "CAGE BIRDS," 154, Fleet Street, London, E.C.

THE GREATEST VALUE FOR MONEY EVER OFFERED. GET YOUR COPY AT ONCE.

ILLUSTRATED IDEAS

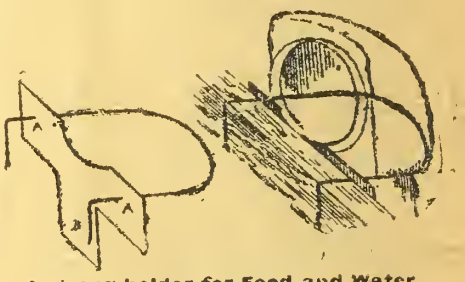
Under this heading we shall illustrate weekly some ideas useful to the bird-keeper. Readers are invited to send us particulars of any novel and practical appliance of use in our hobby, either in cage, bird-room or aviary, with a rough sketch of same where possible. Every "Illustrated Idea" used in this column will entitle the sender thereof to a postal order for two shillings and sixpence.

No. 185.

A FOOD VESSEL HOLDER.

Sent by W. J. Cowan, 9, Windsor Terrace Falmouth.

The illustration represents an arrangement for holding the cups containing food and water. The wire is bent around so as to take the cups or bottles which are about 2½ inches in diameter. Two holes are drilled in the metal at "A" and



A strong holder for Food and Water Vessels.

"A," the wire is put through and soldered, and the ends are then bent so as to hang to the side of the cage. The extension of the metal marked B keeps the wire loop perfectly horizontal. This arrangement can be used on metal cages as well as on wood and requires no fitting.

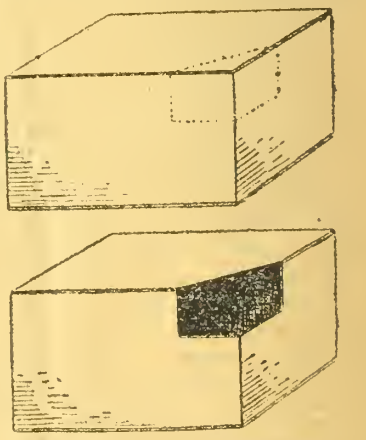
W. J. Cowan.

No. 186.

FOREIGN BIRD NEST-BOXES.

Sent by A. G. Baker, 9, Council Terrace, Rhyl.

Herewith is a sketch showing a simple method of making a nest-box for foreign birds. In the first place, take a small box



Useful Easily-made Nest-box.

and nail the lid on. Then make two saw-cuts, as shown by the dotted lines in Fig. I, thus cutting an opening as shown in Fig II. Improvements may be made as they suggest themselves to the breeder. For instance, holes may be bored for purposes of ventilation.

HARMLESS TO OTHER ANIMALS.

An Outside Aviary: How to Build and Stock it.

By VINCENT E. BUTLER.

First and foremost in this little article I shall try and explain how to build a foreign bird aviary such as can be put up by any Novice who can use a hammer and saw. Few other tools, I may say, were used in the construction of mine.

The Commencement of Operations.

The aviary I advise is a lean-to structure with a gable centre portion, roofed all over, and having a wire front and boarded ends. It should face south if possible. I am going to assume that we are engaged in building one against a wall; if no wall is available the same description will apply but in that event a boarded back must be constructed. The dimensions are, we will say, length 18 ft., width 5 ft., and height 5 ft. 6 inches in front and 7 ft. at back, the gable centre rising to about 9 or 10 ft.

First level the ground; then with 3 by 3 inch quartering make an oblong frame 18 ft. long by 5 ft. wide and place this flat on the ground against the wall in position. We have then the foundation. The next thing is to fix the upright posts, using 3 by 3 inch stuff throughout. These can be either nailed on to the ground frame or let into it. Four posts will be needed for the front, placed 6 ft. apart. Two will be sufficient at the back. The front posts will be 5 ft. 6 inches high, the back posts 7 ft. high.

Now take two 18 ft. lengths and nail on to the top—one on the back and one on the front and ends. On the top of these rails fix the centre gable, which we will suppose has a span of 6 ft. It may be any height that may be desired; but 4 ft. from the top rail is a convenient height, making 9½ft. from the ground. The door posts should be fixed at one end and 3 ft. apart.

I trust I have made myself clear up to this point. A glance at the sketch should make matters perfectly clear. Now dig out just inside about 1 ft. deep. We are then ready for the front. The wire used should be of ½ inch mesh, carefully strained from the top right down to the ground, part of which has been dug out. Thus the wire netting will be 1 ft. below the bottom rail. Now fill in with ashes or brick rubbish to within about 2 inches of the top of the bottom rail and finish off flush with cement.

Some Ornamental Touches.

We have thus a perfect, mice-proof floor. The roof should now be seen to and the boards used should lap over the front by about 8 inches in order to carry the rain well off the wire front. The wood for the roof of our aviary can be cheaply obtained, by buying from any wholesale dealer in picture frame mouldings two crates such as picture mouldings are sent in. These are usually sold at 3/6 each and two of them are quite sufficient for the whole roof. Cover the whole roof with good quality roofing felt, and give two coats of tar.

It will be noticed that thus far our aviary front presents rather a rough appearance, the frame work and uprights being composed of unplaned quartering. We therefore take a planed floor board, 18 ft. long and 6 inches wide and with a compass or even an ordinary dinner plate, mark out half or semi-circles along its entire length. With a key-hole saw cut out this ornamental facing board and nail along the top front rail, completely hiding the rough frame. Another 18 ft. length of floor board should be treated in the same way and nailed along the bottom rail. Shorter lengths treated similarly can be nailed up the posts.

Our front now presents quite a respectable appearance and the work of painting is made very easy.

The Gable Construction.

I should not omit to mention that the centre gable portion should be ornamented in just the same way. They present a nice appearance, and fulfil a doubly useful purpose in that they form a good flange, under which the spring rollers of some stout canvas blinds can be fastened. These blinds can be pulled down at night time and in bad weather, and in the day time can be run up out of sight.

Now make a triangular frame to fit nicely into the gable front. This can be made of 1 by 2 inch stuff. Nail on to this some stout canvas and give two coats of paint. Thus we have a nice shutter, which can be pushed up under the facing board of the gable and fastened with two buttons, as seen in the sketch. We have also a splendid roosting place free from cats, rain and the ravages of bad weather.

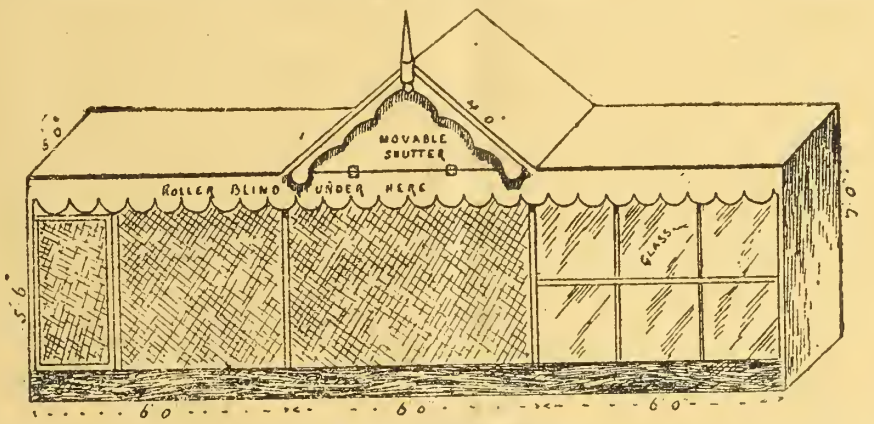
Of course if preferred this gable end can be permanently boarded up instead of being wired and shuttered. But I find that the birds are very fond of this portion of the aviary and spend a good portion of their time there.

The Windows, Door and Blinds.

Now procure from a builder or jobber an old window consisting of upper and lower sashes. These placed side by side under the facing boards and screwed up in position under the wire (as seen in Fig. 2) form the real roosting quarters, and most of the birds will be found to roost in this place, although many will prefer the gable. Thus this aviary will provide ample shelter during all kinds of weather.

The glass portion will need to be wire-netted outside as well inside, but the wire netting need not be so small, 1 inch mesh being plenty small enough.

The next thing is to hang the door. I find the best place is at the extreme end. It can then be 2 ft. wide without the slightest inconvenience. The aviary is thus composed of 6 feet of glass front and 12 ft. of open wire front, with a gable 6 ft. at the widest.



Mr. Butler's Outdoor Aviary.

Under the flanges formed by the facing boards on the open wire portion the roller blinds previously mentioned can be hung, and although these are not really necessary for an aviary so snug as the one I am trying to describe, one has a comfortable feeling in winter-time when the wind and sleet are blowing if he is able to pull these blinds down, and know that his pets are snug and safe. The inmates of the aviary are also free from cats and all outside annoyances.

Now paint all the wood work with two good coats of dark green, giving all the wire work two coats of Brunswick black. Our Foreign bird aviary is then complete. The total cost of the work is something under £3.

Stocking the Aviary.

This aviary is suitable for all the seed eating Finches that are usually kept out of doors and is plenty large enough for 60 birds of about the size of a Sparrow. The interior, including the roof, can be coloured with washable water paint—a nice light blue. This will show up the inmates well. The glazed portion should be plentifully fitted up with snug sleeping-boxes and some branches of natural trees.

The gable portion should also be well-fitted with twiggy branches for roosting purposes. The 12 ft. open wire front should be supplied with sufficient perches, but care should be taken not to over-do it in this direction, as it is calculated to hamper the free flight of the birds so essential to their health.

The birds I should advise the amateur at any rate to commence with, I have found exceedingly hardy. They give very little trouble, many of them will breed and show a margin of profit over the cost of their keep.

The following are a few of the species that will be found both hardy and useful, and withal very cheap: Blackheaded Nuns, Whiteheaded Nuns, Zebra Finches, Java Sparrows (both Grey and White), Weavers, Spice birds, Cockatiels, Budgerigars (both green and yellow), Zebra Doves, a pair of Common Quails, Bullfinches, Goldfinches, Siskins, Linnets, Redpolls, etc. These make a very interesting collection. It should be mentioned, however, that Budgerigars should be kept in a minority as they are likely, if too numerous, to be dangerous to the small Finches.

The Crested Canary in Australia.

Two interesting papers reprinted from the Australian "Poultry and Kennel News."

The Use of Yellow Blood.

Paper read before the Victorian Canary Society.

By W. ELLIOTT.

Is the use of the yellow blood essential for the production of high-class Crests?

The reason why I apply this question more particularly to Crests is because the breeders of this variety in Victoria so entirely discard the use of yellows in their breeding stock, and I often ask myself the question: Why? And is it not just as necessary to have an infusion of yellow blood in this variety as in every other? I am going to answer this question in the affirmative, and as I cannot speak from actual experience in this variety, I intend to make a few remarks on the general theory as to how it applies in the other varieties. As you are all aware, in every form and variety of Canaries we have the two colours—yellow and buff—two distinct forms of feathers, each having a different effect, and each counteracting and controlling the action of the other to such an extent that the use of both, to my mind, is indispensable in the production of a high-class specimen of any variety. The buff supplies length and density of feather, while the yellow contributes colour, silkiness of texture, brightness and quality.

The orthodox method of breeding high-class Canaries is to pair yellow to buff and buff to yellow, and so consistently is this principle carried out in such varieties as Norwich, Cinnamons, and Yorkshires, where colour and compact close feather is of so much importance, and so satisfactory and effective has been the result that any departure is very rarely necessary. But should the breeder find that his birds were becoming coarse and harsh in feather, he would pair up a pair or two of double yellows, and by pairing the progeny of these pairs, back to the buffs bred in the ordinary way, he would soon counteract the defect. On the other hand, if his stock were becoming thin and scant in feather, he would resort to double buffing, and the progeny from these paired judiciously would produce the desired effect.

To the breeder of Plainhead Norwich, Cinnamons, Lizards, Yorkshires, or any variety, bar Crests, the yellow bird is absolutely indispensable. It is his fountain of colour. He must have yellow. Just fancy going into a Norwich breeder's room and seeing nothing but buffs. What a washed-out, one-sided affair it would look! No one would tolerate it, and as he must have yellows, he must breed with yellows, because he cannot breed yellows from two buffs. On the other hand, double yellows will very often throw buffs, but it is absolutely necessary to have both yellow and buff in a well-ordered room. Breeding consistently from double yellows you would soon get a ragged, scant-feathered lot of birds. By constant double buffing you lose colour, and your birds will become coarse and harsh in feather, while by judiciously manipulating the two you will produce both yellows and buffs of much superior quality.

In Cinnamons, the general use of the yellow blood is just as necessary to keep up colour and quality; double buffing should be resorted to as little as possible, as the constant use of it will make your buffs in particular lose that beautiful nut-brown colour, and to take on that washed-out greenish, slatey colour, that none of us want to see in our Cinnamons. Even the Lizard breeder must have his yellow blood. He must have his gold to keep his colour up, and to throw his spangling well on the surface. Breeding with double silvers would soon land him in trouble, by causing the colour to become flat, and the spangling indistinct. He, like the rest, must have the two to turn out the one good one.

Now, gentlemen, by these remarks on the other leading varieties, I think I have shown you (in theory, at any rate), that the use of the yellow blood is absolutely necessary, not only to produce yellows, but equally so in the production of high-class buffs. Why not in Crests? Why do the Crest breeders of Victoria absolutely discard the use of it? What do they think they are gaining by so consistently double buffing, or do they ever give it a thought that they may possibly be losing a great deal by not taking a dip into the yellow fountain now and again?

As many of you are aware, we have been breeding the present type of crested Norwich for about fifteen years, and during the whole of that time, with only one or two exceptions, year after year, the whole of the birds have been bred double buffs.

Through a Bird-room Window.

By the Rev. C. D. FARRAR,

(Continued from page 194).

Diseases (continued).

"Going light" is often caused by unsuitable or non-nutritious food. If the bird is to be saved, the case must be taken in hand at once. In all the bird books you are told to go and catch a good fat spider, give it to the bird, and the cure is certain. How one spider, however fat, could cure a half-dead bird has always passed my comprehension. I take it that the "fat spider" was symbolic of a liberal supply of insect food. As I said in a former chapter, people should not keep soft-bills unless they can afford to buy proper food. All soft-bills, even Blackbirds and Larks, require live insect food daily to keep them in good form, though they may exist without it. You might exist on prison fare, but you would not enjoy it.

Nakedness is hardly a disease, but it can speedily induce disease and death. Many a soft-bill bird comes over here picked all to pieces. I have frequently had them consisting simply of a naked pink body, surmounted by a head more or less bald. right feathers and tail. Now, it needs no great experience to foretell that such a bird, brought from a tropical climate and landed here, say, in February (a very favourite month, by the bye), will not long survive the slings and arrows of outrageous fortune. Some dealers offer these birds as a "trifle rough," and at very tempting prices. It is all right for an experienced aviculturist to buy them, as he knows how to pull them round; but how about the novice?

One day I got a wire from a dealer: "Will you take 10 Zosterops, usual condition, cheap?" I knew the "usual condition" as a euphemism for stark naked. I wired back: "Gladly." They were the very raggedest regiment ever I had ever seen. They had not enough feathers among them to clothe a self-respecting Tomtit. A beginner would have put them into a big, roomy cage, and in the morning would have discovered ten little miserable corpses. Being a man of experience, I did otherwise. I got ten little wooden travelling-cages, and confined each Zosterop "each in his narrow cell apart," to parody Gray's Elegy. Why? you will ask me. Because these birds had plucked each other, and if I had left them together they would have remained naked and not ashamed to the end, like Adam and Eve. By the way, did you ever hear the comment of the old lady on hearing these words read in church? "And they were naked, the man and his wife, and were not ashamed." "Well, then," she snorted, "they ought to have been." This is a digression.

I put the Zosterops in a separate cage, and then I humbly asked leave of my domestic Cassandra to put them in her greenhouse. Leave was graciously given. I gave them plenty of water to bathe in, good soft food and plenty of mealworms, and in a month I had ten as beautiful Zosterops as ever gladdened human eyes.

Dirt is almost a disease. It certainly will kill the strongest bird. Most soft-bills come over in a deplorable condition, plastered with filth from head to tail. The simple remedy is a good tub. It is quite easy to wash a bird. Get a small pudding-basin, fill it with soft warm water, get your shaving-brush, make a good lather and well wash the bird all over; then rinse thoroughly, squeeze out all the water you can, and put the bird in a cage before, but not too near, the fire. In half an hour he will be preening himself, and the next day Richard will be himself again.

In doctoring birds, it will be well to remember the old story: A countryman met a neighbour and asked him how his sick father was. "He's dead," was the laconic answer. "But how do you know?" was the somewhat surprised reply. "You have not seen him for some hours." "Why," was the startling answer, "because doctor said he would be, and he should ken, for he knows what he gi'ed him." My reader can apply the moral.

With regard to the general uselessness of doctoring birds, I often think of an old farmer's wife I once knew who complained bitterly about her deceased husband. "'Ee," she said—"he cost me a matter o' ten pounds—port wine and beef tea all the while, which seemed nothing but a sinful waste, seeing that he couldn't get well." I told her that I had always heard that husbands were an expensive luxury, but I had never realised it to the full before.

In the above paragraphs I have given you some of my opinions on diseases and their remedies, but you needn't adopt them. You can, if you like, do like the old Irish Bishop who declared with emphasis that he never took an important step without consulting his Canons. "But do you always follow their counsels, my lord?" The Bishop, emphatically, "Never!"

Chap. 3: My Brother Aviculturists.

There is a passage in Selden's Table Talk which if I recollect it aright, may be paraphrased in some such form as this: "The lion, reeking of slaughter, met his neighbour the sheep, and after exchanging the time of day with her, asked her if his breath smelt of blood? She replied, 'yes,' whereupon he snapped off her head for a fool. Immediately afterwards he met the jackal, to whom he addressed the same question. The jackal answered, 'No,' and the lion tore him to pieces for a flatterer. Last of all he met the fox, and asked the question a third time. The fox replied that he had a cold in his head and could smell nothing much."—Wise men say little in dangerous times.

In the avicultural world many things are dangerous. For instance, it is an axiom among bird lovers that no one has any right to any opinion. This is the mental attitude of all professors. Ninety-nine out of every hundred doctors deny the right of any being to have ideas respecting maladies and treatment of maladies, even his own; or upon any question connected with their guild. As for the law, observe to a lawyer that most law is in direct antagonism to common sense, and he will reply, "It is the Law"—much as an old Greek might have said—Yonder shadow in the path is the God Pan—horns, hoofs and all, worship him. It is the same with Aviculturists. "I am Sir Oracle, and when I ope' my mouth let no dog bark." Of course I am the exception that proves the rule. I am always ready, eager to learn, and what I do not know would make a good library.

Incredulity is one of the worst faults of the aviculturist. He says at his leisure what David once said in his haste—all men are liars; at any rate all birdy men. I know some of my friends who won't believe that you are telling them the truth, unless you keep on telling them the same thing over and over again, just like some old ladies who find it difficult to believe that the train is going direct to the place appointed of Bradshaw, until they have been verbally assured upon the point by two guards, one porter and a newspaper boy. This incredulity is most pointedly displayed in the question of medals. Unless you can trace the bird from the moment it is hatched to the exact present, your chances are hopeless. Of course, you may take the position of Palmerston, who declined to pay the customary fees to the Dean and Chapter of Windsor on being made a Knight of the Garter; and on being told that unless he paid, his banner would not be erected in St. George's Chapel, replied that as he never went to church at Windsor, or anywhere else, the omission would not much affect him. This is, of course, a lofty and independent attitude, which we all admire, though, alas! I could never imitate it when a medal was in question. I wanted my banner hung up, so I had to meekly furnish the required information, but sometimes it was very contrary to flesh and blood for the manner in which it was asked. I should often have liked to say something, but I know the irritability of the average aviculturist in power, and that a reverential reticence is the safest course. When most angry, I have written just a nice and loving letter, quite in the spirit of the Cambridge professor who called William II. quite the nicest emperor he ever knew.

(To be continued.)

WILD BIRD LIFE.

The Buildings of the Rooks.

We have had a cold damp week, followed by falls of snow. The cold did not interfere much with the doings of the wild birds, but the snow has stopped the singing of the Thrushes and Blackbirds, and even the Syklark has been mute for the last two days. The white mantle of snow lays thickly across field and meadow, and these birds have once more to face all the old difficulties of procuring food under adverse conditions. Wild birds are big eaters, consequently they must work hard in such times as these, and have no time for song. The only place just now where any kind of noise is heard from the wild birds is in the vicinity of the Rookery. In the early Spring it would take something almost as serious as an earthquake to stay the Rook talk, even for a short period,—they have always so much to say. How hardy these big fellows are! Their homes are in the tall trees, exposed to all the elements; even a gentle breeze which we feel and enjoy as we walk beneath the trees is magnified to almost a gale in the branches above, we can see it as we watch the swaying of the tops. In a snow storm, or when the cast wind blows, the cold at such an elevation must be intense, for there is no shelter, and through it all, the hardy Rook builds and lays, and incubates its eggs. In consequence of its lofty position, few bird lovers have had the opportunity of carefully examining the home of the Rook. Its solidity is wonderful. An outer network of twigs, roughly cemented together with mud or clay, is followed by a lining or turf, and an inner lining of moss, wool, grass and straw. The nest is finished off smoothly, inside, and is quite impervious to the weather. Its only error in construction, looking at it from a human point of view, is its shallowness. A nest situated in the topmost branches of a tall tree exposed to all weather, and constantly swaying in the wind, and in rough weather rocking violently, should to our way of thinking be a deep cup-shaped structure. This shallowness of construction is more apparent in the first nests built by beginners, than it is in the homes which have been in use for several years. These have been added to yearly, and by these additions, the rim has from time to time been repaired, strengthened and raised

The Gray Lag Goose.

It is stated that the Gray-Lag Goose, which now breeds in the extreme north of Scotland, nested annually on the marshes in the eastern counties a century ago.

A Woodland Thief.

The Jay is supposed to be particularly fond of the eggs of the Wren, and yet the Wren's nest may often be found in the moss-grown stump of a tree, near to the home of the Jay. During the breeding season the Jay is especially destructive to the eggs of small birds, and it appears to me very doubtful if the small eggs of the Wren would come in for particular attention.

Richly Coloured Eggs.

It has been suggested that the richly coloured eggs of some birds are laid by the older individuals, and that the lightly coloured ones are the produce of young birds. There may be something in this theory, yet one is inclined to think that the highly coloured specimens are laid by birds constantly producing them, and that this ability to do so is transmitted from parent to children. As proof of such, it has been noticed in colonies of sea birds that the beauty of the eggs decreases where they have been systematically robbed of the best marked specimens.

Where the Golden Plovers Nest.

Anyone at all interested in bird life cannot pass through the market or by a big game dealer's place without taking note of the various birds there offered for sale. Following the game, come the waders, such as Curlews, Wimbrels, Teal, Wild Duck, Plovers, etc. Among these latter we see a few of the golden species. These are readily distinguished by the golden feathers mingled with the rest of the plumage. The throat and breast are black. This is a very interesting bird. Dixon says: "It is a resident bird, but its numbers are increased during winter, and our local birds wander from their upland haunts to the littoral districts at that season. It retires to its breeding grounds in March and April. These are situated on the upland moors and mountain plateaux, thousands of feet above sea-level in some localities, almost on it in others."

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. It kills all insects, harmless to everything else.

ALWAYS USE OUR

DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor for the *bona-fides* of either buyers or sellers. In all transactions the adoption of our Deposit System should be insisted upon.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient, plus the extra postage incurred, has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller, stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from *both* parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has *not* been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or, if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor. We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

PREPAID ADVERTISEMENTS

UNDISPLAYED.—Three Words a Penny up to eighteen words, MINIMUM Fourpence. One Halfpenny per Word for each word over eighteen.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and, after the first eighteen words, are charged at two words a penny, but no single advertisement, even if accompanied by others, will be charged at less than the minimum price, viz., Fourpence.

Headlines or Footlines 6d., 9d., 1/-, 1/6 according to size.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL.

The Proprietor reserves the right to refuse any advertisement, or to cancel any advertisement ordered for a series, at any time, without assigning any reason for so doing.

Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, London. Terms for Display Advertisements on application.

APPLIANCES.

PINE BOARDS, PINE CAGES, AVIARIES, ETC.

three-eighth inch by 11 inch, planed pine, best quality, 2d. foot, second 1½d., 9 inch best 1½d. foot, second 1¼d.; any lengths cut; best pine cages and aviaries to order; estimate free; approval cash, or deposit; trade supplied.—Ridge, Manufacturer, 194, Robertson-st., Battersea, London.

JOHN MACE.

Double breeding cages, 3/10 and 4/10; nest pans with wire brackets, 2/6 dozen; egg mills and seed mills, 1/6 each. Pay me a visit and you will find everything in the bird room appliances that you require.—John Mace, Bird Specialist, Doncaster-rd., Barnsley.

CHEAPEST CAGES IN THE COUNTRY,

15 in. long, 1/-; 36 by 15 by 9, double breeders, 3/6; 36 by 15 by 11, 4/6; all loose wire fronts; painted inside and out with antiseptic paint; warranted death to all vermin; other sizes equally as cheap.—Tom Moss, Papplewick-rd., Bucknall, Notts.

METAL FOUNTAINS, SELF-FEEDING WATER LIPS,

fit any bottle, 2/- dozen; sample 3d. free; japanned covered topped metal seed-boxes, sliding glass fronts 3 inches, 2/- dozen; 4 inches, 2/6; latest egg drawers, fits under doors, 2/3 dozen; largest size, 2/9; cages, fronts, anything (trade supplied).—Hayes, 170, Wensley-st., Blackburn.

JOHN GARLAND.

There is nothing more disheartening to a young beginner than a useless breeding cage. Take my advice, if you require a breeding cage write to an old-established firm; don't be led astray by these 3/6 mushroom firms, as they know nothing about a breeding cage; particulars stamp.—60, High-st., Bordesley, Birmingham.

PUNCH BAR

Cage fronts made by practical workmen, 12 by 12, 3d., 2/6 dozen; 14 by 12, 3½d., 3/- dozen; 16 by 12, 4d., 3/4 dozen; 18 by 12, 4½d., 3/9 dozen; 20 by 12, 5d., 4/2 dozen; 24 by 14, 6d., 5/- dozen; any sizes made, 3d. per foot, to order; punch bars, 8d. dozen, 3/9 half gross, 7/- gross.—Ashmore, 167, Heath-st., Birmingham.

JOHN A. REECE,

Established 32 years, awarded 28 medals and diplomas. The "Perfect" breeders, single and double, fully fitted, including four cross bar front, top nest-pan, doors, removable wood and wire slide sand trays, etc., beautifully finished. German breeding cages, all metal, latest and best designs, wire fronts; one quality, the best. Illustrated catalogue, postage penny. Will exchange Canarics for goods from list.—Jockey Wire Works, Colston-yard, Bristol.

IMPROVED PUNCH BAR FRONTS.

Sizes stocked:—12 by 12, 3d.; 14 by 12, 3½d.; 16 by 12, 4d.; 20 by 12, 5d.; 24 by 12, 6d., other sizes equally cheap; metal enamelled seed boxes, 4 in., 2½d., 6 in., 4d.; wood, 4 in., 2d., 6 in., 3½d.; bright punch bar and cage wire, etc., show cages, baths, nest pans, egg drawers, nest eggs, bird sprays, cages of every description made to order; all goods guaranteed to be as represented or money returned; lists free.—T. A. Fox, St. Helens.

THE "DURABLE" WIRE FRONTS.

Has it ever struck you that the cage fronts are the most conspicuous articles in the bird room. If so, you will understand why fanciers who take a pride in appearances, always purchase the "Durable" fronts. Nothing on the market to approach them for neatness, quality and strength. Prices:—12 in., 6d., 15 in. 7½d., 18 in. 9d., 21 in. 10½d., 24 in. 1/-, all 12 in. high. Fronts with four crossbars, 14 in. high, 15 in. 9d., 18 in. 10½d., 21 in. 1/-, any size quoted for.—J. Walmsley, 6, Brand-st., Nottingham.

570 CHALLENGE BREEDING CAGES

were sold by me last season, and not one deposit was returned; for proof, write to Editor of CAGE BIRDS. They are made from selected planed pine boards, black enamelled outside, blue inside, sliding partitions, sand trays, nest boxes, seed hoppers, and loose wire fronts; 18 inches, 2/-; 20 inches, 2/6; double, 33 inches, 4/-; 36 inches, 4/6; any size cage to order. Remember, these are made from pine boards, not soap boxes.—Henry Morris, Cape Hill, Birmingham.

FOR JOINER-MADE CAGES CHEAP.

Breeding cages, single, 18 inches long, 15 inches high, 1/9; 26 inches by 15 inches by 11 inches, 2/10; double, 36 inches by 15½ inches by 11 inches, 4/6; 3-compartment, 40 inches, by 15½ inches, by 11 inches, 5/6; any size made equally cheap; remember made by experienced joiners only, these cages have given satisfaction in the past, and are much improved this season; list of 51 sizes free.—Pass, Cage Maker, 48, Annesley-rd., Hucknall, Notts.

3s. 6d. DOUBLE BREEDERS. 3s. 6d.

36in. long, 18in. high, blue inside and black out Nest boxes, sand trays, sliding division, forming flight cage; only selected pine used, ⅞ thick, and every cage has loose punch bar fronts, not clumsy wooden ones; and bear in mind you are not buying fruit boxes nor soap boxes, but the best-made and cheapest cage in Birmingham. Read this:—"Feb. 24, 1908.—Sir,—Please send me two more double-breeders like the last two.—Yours, A. Dawson, 6, Lovatt Street, Stoke-on-Trent." Give me a trial.—G. White, 122, Great Hampton Row, Birmingham.

STRONGEST AND NEATEST CAGE FRONTS.

Punched bar fronts, any size to order, most sizes stocked 5d. foot; best tinned cage wire in 48 in. straight lengths, 4d. lb., 7 lbs. 2/-; punched bars, 40 in. long, 1/- dozen; the best white earthenware nest pans, 2d. each, 1/9 dozen; strong wire hangers, 1d. each, 8d. dozen; the latest strong metal seed mill, grind a pint of seed in two minutes, 1/6 each, three for 4/-; enamelled sprays, 3d. each; the latest nickel-silver sprayer, complete, with pipe and ball, 2/- each; bird room and aviary requisites of every description; simply state your requirements, and we will quote you the lowest trade prices; all work guaranteed; orders promptly attended to.

ARE YOUR BIRDS READY?

Have you got the correct Nesting Material?

DODGE'S

FICTITIOUS

COW HAIR

The New Sanitary Nesting Material for Cage Birds.

STERILISED AND ANTISEPTIC.

LISTEN !!! This is a copy of what one fancier says—

Dear Sir,

Nesting material received and beg to say I am exceedingly pleased with it. It is the best material I have ever seen. You can make what use you like re my remarks about your

FICTITIOUS COW HAIR.

In my opinion the sooner *all breeders* get to know about it, the better it will be for them. I am more pleased with it than when I first wrote you.

Yours faithfully, THOMAS WALKER,
March, 1906. East Retford.

And another fancier writes as follows—

I bred 44 youngsters and 3 mules from 4 hens, and used nothing else but your **Fictitious Cow Hair.**
March, 1906. J. LUNN, Yeadon.

For particulars of Mr. Lunn's report, see "CAGE BIRDS," April 14th, 1906 (page 554).

DODGE'S

FICTITIOUS

COW HAIR

Is the *only material* with which birds will build a natural nest. They build as soon as you give it to them, and being a non-conductor, the eggs are kept warm when the hen is off.

Try it and you will see A NEST.

2/6 per lb.

(Sufficient for about 90 Nests.)

442, CALEDONIAN ROAD, LONDON, N

"EGGERTINE"

It is the best, purest and greatest bone and muscle forming food ever known, as the analytical reports of most eminent authorities prove. It is a genuine egg food made with fresh laid English eggs, with white, of course, included (and NOT foreign preserved yolk of egg), with other valuable properties combined. Tins, post free 1s. 3d.; large size 2s. 6d. There is a saving in the larger size.

It is the best proved food to bring hens into laying condition, and give strength and nourishment.

RUDD'S AMATEUR'S GUIDE.

ANALYTICAL REPORTS.

The following is the result of a careful quantitative Chemical and Microscopical Examination made by that great authority, ARTHUR HILL HASSALL, M.D., Author of "Food, its Adulterations, and the Methods of their Detection":—

PARTS IN 100.	
Moisture	28.7
Fatty Matter	19.77
Sugar	10.23
Albuminoid Substances	11.77*
Starch, Cellulose, etc.	47.95
Mineral Matter	1.56†
	100.00
*Containing Phosphoric Acid	0.40
†Containing Nitrogen	1.86

These figures show that the Birds' Food contains a considerable proportion of Nitrogenous constituents, the most valuable elements of Food, together with large amouuts of the fatty and carbonaceous matters known to be so necessary to animal life. Mineral Phosphates are also present in considerable quantity.

The results of the Microscopical Examinations were equally satisfactory with those of the Chemical Analysis, and, in short, the Birds' Food must be pronounced a carefully made and nutritive preparation.

ARTHUR HILL HASSALL, M.D.

Again read another report from that eminent authority,

FRANCIS SUTTON, Esq., F.I.C., F.C.S., Public Analyst for the County of Norfolk, City of Norwich, and Borough of Great Yarmouth; Author of Handbook of Volumetric Analysis, etc., District Analyst under the Fertilizer and Feeding Stuffs Act.

Norfolk County Laboratory, London Street, Norwich.—I, the undersigned, certify that I have made a thorough Analysis of "EGGERTINE" Bird Food, received from Mr. W. Rudd, and have satisfied myself that it is in every respect adapted for the purpose intended. It contains in an easily digestible form all that is necessary for the development of Bone, Muscle, and Tissues required for healthy and vigorous life in birds.

(Signed) FRANCIS SUTTON.

READ OPINION.

Very good results with Eggertine.

6, Richmond Terrace, James Street, Drypool, Hull.—March 7th, 1908.—Please forward a 2/6 tin of Eggertine. I used it last year without using any thing else, and had very good results.—G. Park to W. Rudd.

W. RUDD, *THE* BIRD SPECIALIST, NORWICH.

HARRY ALLEN,
THE ORIGINAL LINNET KING.
Champion of all Champions. Patronised by all the leading exhibitors, Mule breeders, and contest-singers. I have the finest strain in the world, bar none.—Come and bear by birds sing in your own hand. Beware of spurious imitations; they will not give you satisfaction; mine never fail to please; big, fine cock Linnets, well pencilled, good nutty brown, very tame, 1/6, 2/- each; a few gems, cannot be heaten, 3/- each; big, broad-chested cocks, picked specially for muling, 2/6 each. Remember Sergeant Smith, of Leeds, bought three of the above kind and bred 68 mules. Cock Linnets, singing beautifully in singing cage, a packet of my special mixture and instructions how to feed, 3/6 lot; all being taught by my champion winner of over 100 first prizes; I have £15 offered for him. I should advise every Linnet fancier to try one; I defy any dealer to supply same for the money; house-moulted cock Linnets, singing hard, specially trained for coutests, and can win, 8/0, 10/6, 15/6 each, with contest cage; clubs supplied. Birds that will soon make a name for their owners; I was pleased to see some of my customers to the front in singing results last week. I have a few matched pairs that will give satisfaction and prove a success to every purchaser. Cock Go'dfinch and Canary, 8/6, cock Linnet and Canary 5/-; cock Greenfinch and Canary 3/6, cock Goldfinch (house-moulted) and hen Canary, bred mules last year, 12/6; house-moulted Linnet and hen Canary, bred mules last year, 10/6; real bargains; house moulted Bramblefinch, sure breeder, finger tame, only 5/-; for Yorkshire Canaries, see last week's advert; 4 packets of my special mixture, 1/-; book of secrets, 1/6 post free; please read what others say :—29, Thomson Avenue, Johnstone, near Paisley.—Sir,—Received Linnet and cage safe; am very well pleased with them; thanking you for same and quick despatch.—H. Beecroft to H. Allen. 43, Bonsall Terrace, Mill Hill, near Blackburn.—Sir,—Received Greenfinch and Canary safe; am well satisfied; I think they are good value for money; I shall certainly order from you again.—W. Wilcock to H. Allen. Steep Marsh, near Petersfield, Hants. Sir,—Many thanks for birds; they give me great satisfaction; I have dealt with several dealers, but not one so straightforward as you.—W. Butler to H. Allen. I have hundreds of testimonials. I sell more birds than any three dealers in England. If you doubt my word, call in the Leeds Bird Market on Saturday night, and see me sell them as fast as I can get them out. I have sold hundreds of dozens in Leeds alone, week after week, month after month; I have sold in Leeds Market now for 20 years. That is a proof I keep nothing but the best, or I could not have stayed so long. Please give me a trial order, and you will be delighted, as others have been. All my birds are on 7 days' approval; cash or deposit; state wants; correspondence a pleasure.—Harry Allen, Bird Specialist, City Aviaries, Beckett-st., Leeds.

DON'T DELAY!! MARVELLOUS BARGAINS

A Chance of a Lifetime!!

☞ It is a well known fact no person can give the quality we can. All our customers are more than surprised at the marvellous value we are sending. This is no idle boast; pay a visit to our aviaries and see for yourselves. If you cannot do so, state your requirements, or write for Catalogue, post free. Read a few

Genuine, Bona-fide, and Unsolicited Testimonials

from hundreds received recently from all parts of the United Kingdom. They are not what we say, but what our more than satisfied customers write.

Rothesay.—First class health and condition.
59, Montague Street, Rothesay.—I beg to advise you of the the arrival of the hen Canary to-day, in first-class health and condition, notwithstanding its long journey (18 hours), and the fact that we have the coldest weather of the year (frost and deep snow). I am very pleased with your selection; your packing is the best I have ever seen. Early next week you will hear from me again. — James McCrone to Mackley Bros.

Co. Durham.—Quite Satisfied.
Woodland, Butterknowle, R.S.O., Co. Durham. — Received the pair of Norwich yesterday. I am quite satisfied with them, and have written the Editor of "Cage Birds" to hand over the deposit. Thanking you for prompt attention, etc.—James Lea to Mackley Bros.

Grimsby —Highly pleased.
274, Wellington Street, Grimsby. — Birds arrived safely and in sound condition; am highly pleased with them. Thanks for your prompt attention.—B. H. Rimmington to Mackley Bros.

Ireland.—Very satisfactory.
91, Quay, Waterford. March 7th, 1908.—The hen arrived safely. She is very satisfactory.—A. Hipwell to Mackley Bros.

Cambridge.—Well satisfied.
81, Sedgwick Street, Romsey Town, Cambridge.—Received the birds safely, and am well satisfied with them.—J. Dean to Mackley Bros.

Epsom.—Shall send for another.
7, Maldstone Terrace, Wyeth Road, Epsom, Surrey.—Received the bird quite safe. I am very pleased with it. Shall send for another shortly.—J. Middleton to Mackley Bros.

Oxford.—Very pleased indeed.
23, Wellington Square, Oxford.—I received the Canary on Friday; I am very pleased indeed with it, and it sings very nicely; thanks for your kind attention.—Arthur Wood to Mackley Bros.

Guernsey.—Quite satisfied.
I received the pair of birds last Saturday, and I am quite satisfied.—P. Druet, 1, Park Lane, Guernsey, to Mackley Bros.

Croy, near Glasgow.—Very pleased indeed.
Railway Cottages, Croy, near Glasgow.—Received the bird yesterday, all safe, and in first-class health, after 17 hours' journey. He was singing this morning. I am very pleased indeed, and thank you for prompt attention; also for catalogue.—Geo. Cooper to Mackley Bros.

Manchester.—Quality and condition.
The Cliff, Manchester.—Thanks for birds received —their quality and condition leaves nothing to be desired.—W. Whardmould to Mackley Bros.

Durham.—Best of condition.
Flag Row, Sunniside, Tow Law, Durham.—Received the pair of birds safely, Friday, in the best of condition. I am very pleased with them; they are really two good birds.—J. W. Pears to Mackley Bros

Macclesfield.—Well pleased.
The birds arrived safe Saturday morning. I am well pleased with them.—J. Duffield to Mackley Bros.

Kirkwall.—Best ever seen.—Nothing like going to the right place.
The Ayre, Kirkwall. March 3rd, 1908.—Bird to hand last evening; none the worse for its long journey. She is the best crested bred hen I have ever seen. There is nothing like going to MACKLEY BROS. when you require a bird.—Andrew Muir to Mackley Bros.

Rayleigh, Essex.—Very strongly recommended.
Lokoja, Hullbridge Road, Rayleigh.—Your name has been recommended me by a friend in a very high flown fashion for the purchase of a Canary. Trusting you will send me a good one.—A. E. Curry to Mackley Bros.

(After order executed.

Bird arrived safe; highly pleased.—A. E. Curry to Mackley Bros.

St. Helens.—Very pleased.
26, Water Street, St. Helens.—The crested-bred yellow hen arrived safe. I am very pleased with it. Shall not forget to write to you again when wanting anything.—W. E. Glover to Mackley Bros.

Dudley.—Safe and Sound.
570, Springsmir, Queen's Cross, Dudley, Worc. — Received the birds safe and sound. I am very much pleased with them.—J. E. Turner to Mackley Bros.

Aberystwyth.—Gives every satisfaction.
18, South Terrace, Aberystwyth.—The songster I purchased from you last autumn is giving every satisfaction. Please send . . . . cheque enclosed. —R. A. Pope to Mackley Bros.

Pontypridd.—Very pleased.
4, Lanely Terrace, Newtown, Pontypridd.—I received the bird quite safe, and am very pleased with it.—J. Bolton to Mackley Bros.

Heanor.—Highly pleased.
147, Ray Street, Heanor.—Received the pair of birds and breeding cage safely. I am highly pleased with them. I have had several fanciers come to see them, and they all speak highly of them. A Mr. Prince is going to have a pair.—Frank Orme to Mackley Bros.

GOING ABROAD.

I have purchased the entire stock of a successful Norwich breeder, who is going to Canada, and offer, whilst they last yellow and buff cocks, at 10/6 each; hens, 6/6 each; also a few Crests and Crest-breds, at 20/- each; a rare opportunity.—W. Turner, 2, St. Giles-terrace, Norwicb.

SILK'S CHAMPION NORWICH.

More winners produced from this strain than any nther. Birds sold by me have won at most of the all-England shows in keenest competition, and a great number were bred from stock pairs supplied by me. Some of the champion exhibitors owe their success on the show bench to tbis wonderful strain; procurable only from me. I can supply the champions and give satisfaction, and I will place the novice and amateur on the same footing by giving him exactly the same high-class Norwich at moderate prices. My pairs at 40/6 have no equal, and cannot be bought elsewhere at double; in fact, every bird I send out is double value. Why be disappointed witb unreliable strains? Pairs properly matched by an expert and breeder. Special attention given to seo that tho cock and the hen have the necessary points to breed really high-class specimens. All orders have my personal attention, and fanciers can rely upon getting exactly what they require at moderate prices Giant stock pairs, 20/6 to 40/6; Yellow cocks and hens, 12/6 to 25/6; ditto Buff, 10/6 to 22/6; approval to any part of the British Isles. A few choice Crests, Crestbreds and Yorkshires. Cream of the fancy reasonable.—A. E. Silk, Whitstable.

GILBERT'S WINNING NORWICH.

See reports, Birmingham, Wellingborough, Northampton, Crystal Palace, etc., describing my birds, as of rare quality and the correct type throughout. I bave a few grand cocks to spare 7/6, 10/6, 15/-, 20/-, 30/-; pairs 10/6 to 50/-; apprnval.—37, Cravenst., Coventry.

W. RUDD, *THE Bird Specialist,*

NORWICH.

CHAMPION NORWICH.

Large Bullfinch type, good heads, fine, silky-feather, best blood in the fancy; 30 years breeder, many winner sold by me, and I sell birds to breed winners; reasonable; approval.—T. Billington, 166, Colwick-road, Nottingham.

PAYNE AND BENNETT.

Champion Norwich and Crests; one of the largest studs in the Eastern Counties; our latest success at Crystal Palace Show. Limit classes, five cash prizes, including silver medal; Plainheads from 8/6, 10/6 to 30/- per pair; songsters, 7/-; hens, Buff, 3/6, 4/6, 5/6; Yellows, 4/6, 5/6, 7/6; extra good Yellow hens, 10/- to 20/-; Crests, cocks or hens, plenty of feather, strong and reliable, 10/-, 15/-, 20/- upwards; Crestbreds, cocks or hens, with good bold skull, and well lashed, 7/6, 10/6, 20/-; matched pairs, 15/-, 20/-, to £5; approval or deposit; satisfaction guaranteed.—Payne and Bennett, 73, Knowsley-rd.

J. BERTIE,

cage bird judge, has one of the finest collections of Norwich in the Fancy, but at present has not much time to exhibit. But can supply sure winners and stock birds at very reasonable prices. Those short, stout, deep-chested ones, with tail and wings to match, good size, with grand head, and well filled in neck. The kind that do win under a judge that knows his business; stamp; approval with pleasure.—The Cottage, Steedman-avenue, Mapperley, Nottingham.

WHY PAY CASH?

Nowadays anything that is worth having can be obtained on the Deferred Payment System, and in inviting fanciers to deal with us we are merely falling into line with the great business firms of the kingdom. We can supply you with Norwich, Yorkshire, or Roller Canaries, breeding cages, and al bird room requisites, as cheap as you can obtain them for cash, and we send them off on first payment, and trust you to send us the balance a little each week, as you earn it. Read this: 26, Manse-street, Saltcoats, 5th March, 1908. Dear Sirs,—I received the Roller cock in perfect health and feather, and I am sure he can't he beat at the money. Anybody placing their order in your hands can receive nothing but prompt attention, and they will be well satisfied. Yours, J. Kelso. We can give you the same satisfaction if you will place your orders with us. Write at once, enclosing stamp for full particulars to

Telephone, 440. PRESTON, LANCS

Hummel Rollers.

Finest Rollers imported. To speak well of the Hummel is to gild refined gold. Testimonials from customers who say the Hummel is still singing as sweetly as when purchased four, five, six, and seven years ago. All Hummels have delightful, deep, delicate bow roll, hollow roll, hollow bow roll, du pipe, hollow bell roll, grand round bass roll vibrating hollow roll, and charming water bubble roll; one price only, 12s. 6d.; no fancy prices; Hummel hens, 3s. each; a beautiful pair of Hummels for 15s. St. Andreasberg Rollers, 5s. and 7s. 6d. each. Hummel Schoolmasters, 20s. each, better than can be obtained elsewhere at treble the price. Thousands of testimonials have been published by me in CAGE BIRDS from satisfied customers. I guarantee strictly honourable trading and satisfaction to all.—Varney, sole proprietor and importer of this remarkable Roller Canary. Twenty years advertiser.—Varney, Stratford, London.—St. Mary Abbey, Mill Hill, December 1st, 1901. Received the Hummel; it sings beautifully indeed. It sings sweetly, and oh, so softly, all day, and I cannot imagine any bird with a more lovely voice; he begins, even these dark mornings, at 7.30, under his serge cover, and sings till 6 o'clock. Although his song is so lovely, it is beautifully sweet, he has no shrill notes, and I am able to read through it. Miss F. Blockett. December 1st., Southfelt, Poynton, Cheshire Received the Hummel, and am more than delighted with such superior song. W. Glover, to Varney, the largest importer of Rollers in London. January 8th, 1908, Sunner-place, Billinghurst, Sussex. Please send 12 good Hummel Rollers. I have six of your Hummel Rollers; all perfect Rollers. J. Leyland. January 16th, Sunner-place, Billinghurst, Sussex. I enclose cheque for the 12 Hummel Rollers. Am very pleased with them.—Mr. J. Leyland. Oulton Lodge, Aylsham, Warwick, Sept. 20th, 1908.—Mr. Bapha wishes another Hummel Schoolmaster as supplied by Mr. Varney a few months ago. Feb. 24th.—Mr. Bapha has received the Hummel which is again quite satisfactory. Feb. 22, 1908. 20, Bailey Street, Barnsley. Hummel arrived safe. I am more than delighted with such superior song. 7, Brossington. Feb. 22, 1908. Snow Hill, Skellon, Staffordshire. The Rollers to hand all safe and satisfactory.—Geo. Gratton. Feb. 20, 1908., 20, Gladstone Street, Kilworth. Hummel to hand; what a beautiful song; so superior to all other Rollers imported in this district.—W. Pebury. Feb. 20, 1908.—5, Millfield Road, Blengome. I enclose 20/- for another Hummel. I am so delighted with the last one; it is one of the best birds ever heard in this district, and I have seen a few.—The Hon. A. Stevenson. Feb. 22, 1908.—Canaries to hand in pink of condition. I have had birds from all over the kingdom, but never received such value.—J. Smith. List free; sole importer and proprietor of these Rollers.—Varney, the Great Hummel Importer, Stratford, London. 23rd year of advertising.

CHAMPION ROLLERS.

Notice.—I have a splendid consignment of those extremely musical St. Andreasberg Rollers; these are splendid day and gaslight songsters; they are delightful, with their deep bass rolls, hollow rolls, sweet silvery trills, water bubble runs, piccolo trills, bell, sharp and gong notes, etc.; these are splendid quality, and are certain to please you; all on 6 days' approval, on receipt of P.O., or you can deposit the amount with the Editor, 8/6, 10/6, 12/6, 15/6, hens to match 3/-, 3/6, 4/-, inspection invited. — William Shaw and Son, 97, Essex-road, Islington, London, N.

£50 for YOU.

I offer you £50 if the following Testimonials are not Genuine and unsolicited I have many thousands open for your inspection all bearing original Post Marks. Note they are dated February 1908, not some old ones that have been preserved for years and the dates altered or crossed out for convenience. I have hundreds bearing February 1908 Post Marks.

Another winner.

Union Street, Gt. Abersychan, Mon. February 27th, 1908.—I require another Roller for a friend. He has some good birds, but would exchange any two for the one you sent me. I won first and special, value £3 3s., with many points to spare, for best songster, and have had numerous inquiries for price of bird, and have referred them to you for the same quality of Rollers as mine at reasonable prices.—J. Jones to Miss Storey.

High Row, Fair Hill, Haltwhistle. February 28th, 1908.—Received H.M.R. on Thursday, and must thank you for same. It is an extra good bird for the money, commencing to sing as soon as unpacked. There is no need to wait for approval.—H. Pearson to Miss Storey.

55, Old Road, Ashton-in-Mansfield. February 26th, 1908.—The Roller is a little champion. I would not like to part with him for twice the price I paid you for him.—Mrs. Johnson to Miss Storey.

I undoubtedly supply the best birds it is possible to obtain at the prices.

Genuine Trained St. Andreasburg Roller Cocks in full soug by day and artificial light, 8/6, 10/6, 12/6, 15/-, 20/- each. Pure Roller Hens 3/6, 4/-, 4/6 each.

Hartz Cocks.—The best loud free songsters where plefty of noise is required. Cocks in full loud free song by day and gas light 6/-, 6/6, 7/- each. Matched pairs for breeding songsters 8/6, 9/-, 9/6. Hens 3/- each.

Neat travelling cage 3d. each extra.

New Illustrated List of Birds and Cages, stamp for postage.

All Canaries carriage paid on 7 days' approval at my risk.

I HAVE sixty of my prize-winning birds for sale reasonable, including Yorkshire, Norwich, Crest and Crest-bred, Lizards, Goldfinch, winners at Battersea South-West London, Wimbledon and Crystal Palace; see schedules; also single and double breeders and show cages and cases; no rubbish.—Slade, 155, Broomwood-rd., Clapham Common.

H. LINDSAY'S champion Yorkshire. I have one of the finest stocks of Yorkshires in the country for disposal. All my own breed and bred from my winners; few grand pairs left from 12/-; splendid cocks from 7/-, grand length, type and quality; inspection invited; stamp; also some grand Norwich left cheap to clear.—202, King James-st., Walkley, Sheffield.

M. BARRACLOUGH.

Yorkshires, Canaries, Green and Cin. marks, also clear, pink-eyed, hens from 5/-; cocks from 8/-; approval.—4, Limc-st., Gt. Horton.

A. DEARDEN

has only a few pairs of Cinnamon-marked and clear pink-eyed Yorkshires left, from 10/6 pair; cocks from 6/- each; approval; P.O. or deposit.—Spring-st., Brighouse, Yorkshire.

LOOK HERE!

I have some grand quality in Yorkshire hens, long, slim, typical birds, any colour, sent on approval, 4/- each; also some grand matched pairs, 12/6 pair.—Joe Thomas, Amblerthorn, Halifax.

CRAWHALL'S YORKSHIRES.

I have decided to sell five pairs which I had selected for my own breeding, having too many, 25/- to 40/- pair; a few odd cocks, 10/- to 25/-.—St. George's-terrace, Newcastle-on-Tyne.

Yorkshires, all colours, including greens, cocks, 5/-, 6/-, 7/6, 8/6, 10/- upwards; hens, 4/-, 5/-, 7/6 upwards, cold-room bred; 7 days' approval.—

SAMUEL DEAN,
6, Ashmount, Gt. Horton, Bradford

J. WILCOCK.

I have now ready some grand exhibition birds, both Yorkshires and Norwich Plainheads, for sale, any on 3 days' approval, satisfaction guaranteed or full money returned.—14, Chapel-st., Eccleshill, near Bradford, Yorkshire.

A. E. PATTRICK.

Yorkshires. Some splendid birds for stock purposes; cocks 6/-, 7/-, 8/-, 9/-, 10/- upwards; hens 5/-, 6/-, 7/-, upwards; few Cinnamon marks, pink eyes left; 7 days' approval; cash or deposit.—111, Park-st., Southend-on-Sea

HOLROYD'S YORKSHIRES.

Having to reduce my stock, I offer some exceptionally good birds at half their value; so fanciers anxious to breed their own winners should try my matched pairs from 15/- to 30/- per pair.—43, St. Paul's Terrace, Shipley, Yorks.

WINNING YORKSHIRES.

John B. Waterman (winner L.P.O.S. championship diploma, gold and silver medal) having selected his breeding stock, has for disposal few typical pairs, bred from winners, 12/6 per pair; satisfaction guaranteed.—9, Herne Grove, Dunstan's Road, East Dulwich.

AMBLER'S YORKSHIRES.

For purity of breed, type, style and quality, our strain has proved the finest in the faucy for over 25 years. As we are reducing our breeding stock, we have for sale a few real gems, cocks and hens, plenty of length, perfect shape and feathered to perfection, possessing all the qualities to breed big winners, pairs from 20/- to 70/-; hens, 10/- to 30/-; what we offer are the highest possible breed, and better Yorkshires cannot be bought; satisfaction guaranteed; stamp particulars.—17, Lytton-rd., Bradford.

SUTCLIFFE & CO.

We have won the Cinnamon marked competition nine years, also bred and sold more winners in this variety than any other fancier. We have some good birds for sale, both Cinnamon marks and dark eyes. Matched pairs from 20/- a pair; bird sent on three days' approval, and if not satisfied full money returned; or can be seen any time on receipt of a postcard; stamp for reply.—1, Back Kitson-st., Windhill, Shipley, Yorks.

A GENUINE OFFER.

Mr. Marsh invites you to call any time and inspect his Yorkshire Canaries; over 300 high-class birds on show for your approval at working man's prices, in Yellow, Buff, Variegated, and colour-fed; cocks, 5/6, 6/0, 7/6, 8/6, 10/6, 12/6; hens, 3/-, 3/6, 4/6, 5/-, 6/- 10/6, 12/0; matched pairs, to breed winners 8/6, 10/6, 12/6, 15/-, 20/-, 25/-; a trial order will prove type and quality; sent carriage paid on seven days' approval; cash or deposit; travelling cage, 2d.—Freemason's Aviaries, Mercerons., Brady-st., Whitechapel-rd., London.

CHAMPION YORKSHIRES!

Splendid stock of high-class Yorkshires, typical birds, fine feather, buff cocks 5/6, 6/0, 7/6, 10/-; yellow cocks 6/-, 7/-, 8/-, 10/-; pairs 8/0, 10/0, 15/-, £1; hens 3/6, 4/6, 5/6, 7/6; all cocks on song; large Norwich Crests, and Crestbreds, good type and plenty of feather; cocks 8/6, 10/0, 15/-; hens 5/6, 6/6, 7/6, 10/-; pairs 15/-, 17/-, 20/-; Norwich Plainheads, Bullfinch type, buff cocks 5/6, 7/6; yellow cocks 6/-, 7/6, 10/6; hens 3/6, 4/6, 6/-; all cold room; travelling cages, 3d.—Arthur Thompson, 197, Bradford-rd., Frizinghall, Bradford.

HUDSON CHAMPION YORKSHIRES.

are what you want if you want to breed your own winners, bred from or related to winners at most of leading shows, Bradford, Windhill, Shipley, Laisterdyke, Palace, etc. I have a few pairs in clears, ticked, marked, colour-fed and natural colour cocks, 8/6, 10/6, 12/6; hens 6/-, 7/-, 8/-; pairs matched to breed winners at 10/6, 12/6, 15/-, £1; cold room bred and kept ready for breeding. I have received scores of testimonials for this strain, three days' approval. I desire no man's money who does not get satisfaction; stamp reply.—Hudson, Confectioner, Thackley, Bradford.

CHAMPION YORKSHIRES.

Important Notice. — If you want long, slim, straight, upstanding Yorkshires, with feather like silk and in the prime of condition, write or call and see the finest and largest stock in London; every cock bird in full song, and on six days' approval. I have them in all colours. Yellow cocks, 8/6, 10/6, 12/6, 15/6, buff cocks 8/6, 10/6, 12/6 Yellow hens, 4/6, 5/-, 5/6, 6/-, buff hens, 4/-, 4/6, 5/-, 5/6.—Note the address, Wm. Shaw, 97, Essex rd., Islington, London, N Five doors from Cross-st. All cars stop at Cross-st.

Champion Yorkshires

1st, 3rd, VHC, etc., Crystal Palace.
Birds sold from this strain to Mr. C. Blackhurst won above.
ALL Mr. BATES' NOTED STRAIN

of Yorkshires. I bought his 20 years' strain, which won last season 20 firsts, 18 seconds, 16 thirds, etc.; also 3,000 prizes this last 20 years, including firsts at Crystal Palace. A few marvellous pairs, 14/-, 16/-, 18/-, 20/-, 30/-, pair; odd cocks and hens, from 5/-, 6/-, 7/6, 8/6, 10/-, 12/-, 15/-, 20/- each; any on approval. Young birds, bred from above strain, have won top prizes at Accrington, Burnley, Manchester, Cardiff, etc., this season.

J. SANDIFORD, CANARY BREEDER,
Established 1879. **PRESTON, LANCS.**

THE NOTED PARAGON YORKSHIRES.

Having won the much-coveted £21 Yorkshire Challenge Cup, 1908, for the fourth time, is ample proof that the "Paragon Strain" is what the name implies, viz., the best of its kind the world can produce. I am the only exhibitor that ever won this valuable trophy outright, namely in 1903-4-5. I did not compete the two following years to allow others to come to the front. In 1906 I secured the Cinnamon-marked Trophy, and in 1907 I won the "Amalgamated Yorkshires," 25 guinea Challenge Trophy. In two successive years at the Crystal Palace my birds were awarded 13 firsts, and other prizes, including about 20 cups, medals, and specials, such a record has never been equalled by any other firm or fancier of the present day. The above are incontrovertible facts, and are not wild, exaggerated statements of advertising bluff and bounce to catch the inexperienced fancier. My birds come to the front year by year with the same regularity as one day follows another, thus proving beyond question that pedigree breeding is the royal road to success, as blood is bound to tell. I have bred and sold more noted winners during my career than any other firm. One client alone who had all his birds from me, won in his first season 63 specials and prizes. Further comment would be superfluous. I have for disposal some of the best that money can buy for length, style, position, and quality they cannot be excelled. Cocks, hens, or matched pairs to breed the best, prices reasonable; three days' approval; stamped address for particulars.

W. H. SHACKLETON,
South Bank House, WIBSEY, BRADFORD.

J. C. BARNES,

149, Duncombe St., Walkley, Sheffield.

Challenge Cup Winner, 1905, 1906, 1907.

All my winners guaranteed own breeding.

Havings finally selected our birds for stock, find I can spare the following.

NORWICH.

Yellow Cocks 20/-, 30/-; Buff Cocks 20/-, 25/-, 30/-; Buff Hens 20/-, 25/-. Two Buff Green Cocks 20/-, 25/-; Yellow Cock and Buff Hen 40/-; Buff Cock and Yellow Hen 40/-; Extra good Buff Cock and Yellow Hen 60/-.

YORKSHIRES.

Yellow Cocks 20/-, 30/-; Buff Cocks 20/-, 25/-; Buff Hen 20/-; Yellow Hen 20/-; Buff Cock and Yellow Hen 40/-; Yellow Cock and Buff Hen 40/-; Buff heavy marked Cock 20/-; Yellow heavy marked Hen 15/-; Buff Ditto 10/-.

All are of the very best of blood, judiciously bred, and will throw capital progeny.

3Days Approval with every pleasure.

IF YOU WANT A CANARY

Buy of me. I will send you any bird on my list and you can keep it for A WEEK ON TRIAL and you may deposit cash with Editor of "Cage Birds" if it is exactly what you wanted. Nothing could be fairer. I believe in honest dealing and I believe in giving Maximum Value for money. You can have my Bird Price List for the asking, or my Illustrated Catalogue for 2 stamps to cover postage.

(Only Address in Bradford.)

THE GREATEST BARGAINS IN ENGLAND TO-DAY IN High Class . . . Yorkshires

Cocks, 5/6, 6/6, 7/6, 8/6, 10/6, 15/-, 20/-, 30/-. Hens, 3/6, 4/6, 5/6, 7/6, 10/6, 15/-. Pairs Matched for Breeding, 8/6, 9/6, 10/6, 12/6, 15/-.
All on approval. Travelling Cages, 3d. extra.

I can give you entire satisfaction whatever price you select, that is, if satisfaction is possible, for I have a reputation at stake.

READ OPINIONS.

Holly House, Heath Park, Romford. March 7th, 1908.—I received the pair of Yorkshires and am well satisfied, and think them well worth the money. They will settle down in a few days. You can make what use you like of this.—I honestly recommend you.—R. Hayman to W. Rudd.

1, Chapel Street, New York, Bramley. March 8th, 1908.—The pair of Yorkshires arrived on Wednesday afternoon, safe, and in splendid condition. I am well pleased with them.—D. J. Rees to W. Rudd.

15, Dickerson Street, Derby. March 3rd, 1908.—I received the Yorkshire Canaries this morning. I am very well satisfied with same.—J. Stead to W. Rudd.

W. RUDD, THE Bird Specialist, NORWICH.

WILCOCKS' YORKSHIRES.

Winner of the L. and P.O.S. Challenge Cup, 1907 and 1908; also champion diploma Cinnamon-mark at Crystal Palace, and I am second for the Cinnamon mark trophy and second for the Yorkshire Club specials and third for the Yorkshire challenge cup, and third for Shackleton's trophy, those are five of the largest trophies for Yorkshires, I think this will prove to my brother fanciers that my Yorkshires are of the best. Having selected my breeding stock, I find that I have some extra good stock birds for sale, this is an exceptional opportunity for you to breed your own winners, matched pairs from 20/- to 60/-; cocks from 10/- to 40/-; hens from 7/6 to 30/-; sure to give satisfaction, or your money returned; all birds sent on three days' approval; cash or deposit.—14, Chapel-st., Eccleshill, Near Bradford, Yorkshire.

I AM SURE

There is no doubt about it. I can give you the best possible value for money. Thousands of delighted customers write stating their satisfaction.

Staddlethorpe, R.S.O. February 27th, 1908.—Received Yorkshires safely; they give every satisfaction, in fact they are the best I ever had. I shall most certainly send to you again for more birds.—Wm. St. Paul to Miss Storey.

Heybridge, March 1st, 1908.—Birds arrived in perfect condition. They are the very birds I required. Thank you.—T. Fenton to Miss Storey.

30, Hollywood Road, Liverpool. March 1st, 1908.—The Yorkshire cock I received five days ago is perfectly healthy and good style. I am much pleased with him.—J. White to Miss Storey.

9, Dene Terrace, North Shields. February 26th, 1908.—I am highly pleased with Yorkshire, which gives every satisfaction; he is a beauty and well worth the money. Wishing you every success.—G. Turnbull to Miss Storey.

12, Penfold Abbey, Darlaston. February 28th, 1908.—I thank you for splendid Yorkshire, which arrived in splendid condition. I am highly satisfied, and thank you for your straightforward work. Sy. Dudley to Miss Storey.

J. NORTH,

Analytical Chemist, Canary Judge and Expert,
Over 30 years' experience in breeding and rearing exhibition Canaries and Hybrids. Highest success in both branches. Letter of advice on any subject Fee 2/6. Suitable medicine supplied when required.
435. OXFORD ROAD, READING.

IT IS . . . EASY INDEED

To imitate on paper, but I openly assert it is impossible for all the Imitators combined to produce anything approaching the collection of Canaries I possess, either in quantity or quality, and taking the combination they are but "Drops in the Ocean." Call and inspect some of these so-called stocks (if you can find them) and then come and see me.

If my statements are not right, publish the fact to the whole World. It is this "empty bounce," this infernal impudent deception, this working on bogus names and no names at all (but the real names, places, reasons, etc., are all well-known to me) that brings so much discredit to the "Fancy."

Read a few more Unsolicited Up-to-Date Extracts here:—

Glad to know, etc.

135, Grey Mare Lane, Bradford.—Box and bird received all safe. Quite pleased with same. The bird was singing grand in half an hour after being caged. Quite different to the rubbish in Manchester. Am glad to know where to get a good bird when I want one.—W. H. Wilson to W. Rudd.

56, Queen Street, Crewe. March 4th, 1908.—I am pleased to say that the muling hen arrived quite safe, and gives me every satisfaction. Hoping to favour you with a few more orders shortly.—Thos. Kirk to W. Rudd.

Delighted.

South View Cottages, Chessington. March 3rd, 1908.—I received the Norwich songster safely. I am delighted with it. It started to sing the next day, and now is singing beautifully.—Hy. Sayers to W. Rudd.

Thought you could not do such at the price.

Ballingarry, Co. Limerick. March 4th, 1908.—Birds etc., to hand; more than pleased with them; thought you could not put such birds in the market at the price.—G. Burke to W. Rudd.

Highly satisfied.

Wrexham. March 6th, 1908. — Received Lizards safely. I am highly satisfied. Thanks for promptness.—W. Ainge to W. Rudd.

Shows sound business principles.

426, Westgate Road, Newcastle-on-Tyne. March 6th, 1908.—Bird arrived safe; astonished at the quick execution of order. Shows sound business principles.—E. Galloway to W. Rudd.

Worth double the money paid.

Meli's Park, Frome. March 7th, 1908.—Birds to hand, for which accept my best thanks. Am more than satisfied with them. Every bird was in the pink of condition. I must say they are worth double the money paid.—A. E. Jeffreys to W. Rudd.

What your advertisements suggest.

218, Manchester Road, Walkden. March 3rd, 1908.—The bird arrived safe and in good health. I am well pleased with it, and more so in the way you have treated me. You are just what your advertisements suggest, namely, straightforward in your dealings, which is, of course the best. I have known dealers, when they have sent a bird on at a good price for a week's approval, and it has died before the time has been up, have sent one back not worth 2d., and told them he could not send another if anything should happen to that.—Hy. Howard to W. Rudd.

(Yes, this is the game often played by a certain class.—W. R.)

All you represent them to be.

123, West Street, S. Glasgow. March 1st, 1908. — Birds arrived all safe, and I am well pleased. — Wm. Somerville to W. Rudd.

NOTICE! I send you **positively Free** my fully extended Current Copyright Illustrated Price List upon receipt of postcard.

☞ Do not forget that I possess every variety of Canary bred, with 2 exceptions, besides light and dark exhibition and singing mules.

Nows the time!!

To send to Adams's for a genuine African Grey Talking Parrot. These birds I guarantee to become first class talkers, remember

"Adams's Parrots."

are renowned all over the world and because we only deal in good healthy strong birds we have always a good supply on hand, so if convenient call and select a bird for yourself: or if you cannot call we will be pleased to send you one on approval. Price List free. We will give you satisfaction.

ADAMS'S, 19, Park Place, Liverpool.

CAUTION!

Readers of CAGE BIRDS who contemplate breeding Budgerigars should be careful to use proper breeding husks; "CAGE BIRDS," "Bazaar," "Poultry," and "Fancy" Press generally, have all advised their readers to employ my "Improved Secure" husks, because they are far more successful and altogether different to any other kinds; they have been first favourite for 16 years, so don't be gulled by powerful paper puff; send postcard for free instructive pamphlet on "Budgerigar Breeding." Husks, 4/6 dozen, smaller quantities 5d. each; Cockatiel box nests, 1/6 each.—Harper, Adelaide Villa, Dudley Road, Wolverhampton.

PARROT PROBLEM

solved. For full proofs send postcard at once for my large book, "Parrot Prattle," now containing 168 pages. This is the most wonderful book ever offered free of all charge to all Parrot fanciers. (This "Parrot Prattle" is registered copyright, and all infringers and imitators will be proceeded against). It contains hundreds of testimonials from all parts with full names and addresses, many interesting facts, and gives valuable advice and hints to all Parrot buyers. Full details of our original system of selling Parrots on four week's trial, at our risk, which we were the first to introduce. We sell Parrots of all descriptions on four weeks' trial, at our risk, before settlement. Cheapest and best in the Kingdom, and any Parrot sold by us, and not giving full satisfaction, will be exchanged any time within twelve months. Remember we lead and others try to follow. Write to other dealers as well as us, and judge for yourselves. Lists of Parrots for sale and above book post free on receipt of postcard.

PARROT AVIARIES, MORECAMBE.

Advertisements Continued on page 275.

Dead Birds in a Tree.

At Hevingham, near Stratton, Strawless Hall, the residence of Mr. W. J. Birkbeck, writes Mr. T. Miles, a large silver deal tree was blown down or struck by lightning during the storm. On examination no fewer than 66 Crows and Jackdaws were found dead among the branches. It seems to be a mystery as to how the birds were killed, as no other trees were touched by the fall. No doubt they had taken shelter in the tree and were struck by a flash.

"AVIARIES, BIRD ROOMS & CAGES"

Is the title of

CAGE BIRDS' LATEST HANDBOOK.

It is written by that well-known fancier, Mr. H. Norman ("Cage Birds" Artist-in-Chief) who has illustrated it with a wealth of helpful drawings. It also contains 10 lovely full-page photographic plates.

It must be on every bird-lover's book-shelf

who desires to thoroughly understand the proper Building, Fitting and Management of Aviaries, Bird-rooms and Cages.

Price 2 3, post free, bound in cloth, gilt

Send a Postal Order to—

THE MANAGER, "CAGE BIRDS,"
154, Fleet Street, London, E.C.

Kindly thank all who answered my advertisement in CAGE BIRDS re yellow cock, writes Mr. F. Love (Clackmannan), as I had so many letters for him I cannot reply to all. This says very much for the circulation of CAGE BIRDS. I wish CAGE BIRDS every success as I think it is a grand paper.

TWITTERINGS.

Last week's advertisement in CAGE BIRDS has brought uss very good results, writes Messrs. Scott and W. Lean (Glasgow).

Please note my new address, writes Mr. F. W. Pickard. It is 7, Hatfield Street, Wakefield, Yorkshire.

Mr. A. Wellings, we learn, will judge at Runcorn on August 1st, and at Warrington on November 13th.

We hear that Mr. C. Martlew, taxidermist and bird dealer, has removed from 17, Annetwill-street, Carlisle, to 25, Millholme terrace.

Kindly note change of address to Gilbert's Corner, Newfield, Newcastle-on-Tyne, writes Mr. L. Hall, secretary Pelton and Dis. C B S.

I have had so many replies to my advertisement in CAGE BIRDS for a hen Bullie, writes Rev. Bernard Wilton (Middlesbrough), that it would cost me 5s. or more to answer them all.

Kindly note that I have removed from 12, Brythen Street, to 105, Silverdale Avenue, Tuebrook, Liverpool, writes Mr. J. W. Metealfe.

We hear that Mr. J. Pepper, of 17, Albert Street, Hucknall Torkard, Notts, has taken over the secretaryship of the Hucknall Torkard C.B.S.

It has been decided by the committee to hold our next annual show on November 19th, writes Mr. David Jeremy, secretary of the Morriston and Dis. C.B.S.

Kindly note change of address to 94, St. Margaret's Road, Lowestoft, writes Mr. W. Nichols, secretary of the Lowestoft and Dis. C.B.S.

We hear from Mr. A. E. Silk, of the Aviaries, Whitstable, that he sent two pairs of Norwich plainheads to Glasgow last week at £15, and they gave every satisfaction.

Miss Gwyn, of Somerville, Ramsgate, asks us to request the fancier who wrote last week from Sacriston, Durham, to kindly send his name and address again, as his letter has been mislaid.

I get CAGE BIRDS every week, and am highly delighted with it, writes Mr. W. Manson (Wick). It is the best bird paper one can pick up between Land's End and John o' Groats.

I was advised by a friend to take in CAGE BIRDS, writes Mr. Wm. Eldridge (Child's Hill), and I wish I had known before that there was such a good paper with so much advice to beginners in the Fancy.

We hear from Mr. A. Bowes, secretary of the Crook Original C.B.R. and P.S., that it has been decided to hold a First-Feather Young Stock Show on July 25th, in addition to the usual annual show.

I have been elected secretary of the Tong and District C.B.S., writes Mr. J. Smith. All correspondence in connection with the society should be addressed to me at 7, Rose Terrace, Tong Street, near Bradford, Yorks.

Will members of the Great Horton Good Intent O.S. who have removed during the year, writes Mr. H. Schofield, secretary, 137, Beldon Road, Great Horton, kindly send their new addresses on to me.

I cannot praise CAGE BIRDS enough, writes Mr. J. Garland (Birmingham), as it has caused five old friends, whom I have not seen for 20 years, to write to me, two at Poplar and three at Stratford. Good luck to CAGE BIRDS.

Mr. P. H. Harris, of Bedford Square, London, has purchased my 1st Prize British Goldfinch, writes Dr. McMath, of Cork. He is a beauty, and should make his presence felt in the Metropolis next show season.

I have been appointed hon. secretary of the Lancashire and Lizard Fanciers' Association, writes Mr. John Rukin, and all communications should in future be addressed to me at 44, Hall Carr Road, Rawtenstall.

A smoker and social evening is being held by the Glasgow and West of Scotland N.M.B. and F.B. Club, on Tuesday, March 17th, at 8 p.m., at the Bank Restaurant, Queen Street, when friends will be welcomed.

It has been decided to hold an open show on December 4th and 5th, and to have three judges for same, writes Mr J .W. Metcalfe, sec, pro. tem., of the Liverpool O.S. Secretaries please note dates to avoid clashing.

It has been decided to hold a First Feather Show on July 11th, write Messrs. Cornish and Adams, secs. of the Exeter and Devon P. and C.B.S. This is the first young birds show we have yet held.

We have received a donation of £10 from a local institution, writes Mr. John Ford, sec. of the Kelty and Blairadam C.B.A., which brings our total up to £21. We wish CAGE BIRDS every success.

Mr. J. H. Payne has again been engaged for our open show on November 7th and 9th, writes Mr. C. Draper (Leicester H.-in-H. C.B.S.). This, I believe, is the seventh successive occasion, which speaks well for his popularity.

Kindly state that we have had to change our place of meeting from the Volunteer Hall to Masonic Hall, owing to a local society holding their annual social at the former, writes Mr. W. B. Smart, secretary of the Loanhead and Dis. C.B.S.

We note from the report to hand, that the secretary of the Scottish Norwich Plainhead Club, Mr. D. Smith, resigned that post at the annual general meeting; also that affairs are being looked after by Mr. J. Winter pending the election by the members of another secretary. One of the members was punished for alleged showing of borrowed birds, and counting points therefrom in competitions.

Members of the National British Bird and Mule Club should not overlook the fact that voting papers concerning the proposed additions to the Club's list of desirable cage-birds must be posted to the secretaries to-day (March 14th) at latest.

The application from the Scottish National C.B.S. for the Edinburgh Corn Exchange for the next annual show has again been successful, writes Mr. J. Winter, the secretary, the dates fixed for the show being 31st December and 1st January next.

Mr. H. Hall, of Macclesfield, asks us to state that he is waiting for the full address of the sender of the telegraph money order for 25s. for the Lancashire advertised last week in CAGE BIRDS. This was omitted from the wire, hence delay in sending the birds.

I have removed to larger and more convenient premises at 11, Fylde-street, Preston, owing to the great increase in my business, due to my advertising in CAGE BIRDS, writes Mr. M. Hopkins. I wish CAGE BIRDS good luck.

The following judges have been chosen to officiate at the Alnwick and Dis. C.B.S. Show, to be held on October 31st, writes Mr. R. F. Rennison, the secretary:—Messrs. Anthon Hay (Tweedmouth), Canaries, and James Maddison (Newcastle-on-Tyne), Hybrids, British and Foreign.

The next meeting of the L. and P.O.S. will be held at the Raglan, Aldersgate-street, on Thursday, March 19th at 8 o'clock, writes Mr. H. Lambert Brown, the hon. sec., and will be an interesting "Questions" evening. A large attendance is hoped for. All fanciers welcome.

OBITUARY.

MR. JAS EDDINGTON (Edinburgh).

I regret to have to intimate the death of one of our oldest members, in the person of Mr. James Eddington, who died suddenly at his residence, 4, Sunnybank Terrace, on February 28th, writes Mr. Geo. R. Smith, secretary of the Edinburgh Eastern Dis. O.S. Mr. Eddington has been an enthusiastic member of our society for the last sixteen years, and at the monthly meeting many were the expressions of sorrow at the loss that had been sustained by the society. He was best known in the district as a breeder of Scotch Fancies, many winners having been bred by him. He will be missed for the kindly advice he was ever willing to give relating to this particular breed.

MR. ALEX. BROWN (Forfar).

The death is announced of Mr. Alex Brown, writes Mr. W. Grewar (Forfar). It occurred at his residence at East High Street, Forfar, last week. He was for some years a frequent exhibitor in Scotch Fancy classes at the local bird shows. He was secretary of the cage bird section of the New Year show held in Forfar some years ago, and was the breeder of that once well-known Green Scotch Fancy Cock, "The Tinkler." The deceased was 70 years of age, and is survived by a son and four daughters, his wife having predeceased him by several years.

Finding that the date fixed for our November show clashed with Rochdale and Blackburn, writes Mr. W. Hy. Heathcote, secretary of the Preston O.S., my council have altered the date to November 13th and 14th. The society have found permanent headquarters in the rooms of the Preston Scientific Society (of which society I am secretary), and all future meetings will be held there, except of course the November show, which will be held in the Assembly Rooms of the Public Hall.

All members of the Jarrow and Hebburn and Dis. C.B.F.S. and of the South Shields C.B.S., writes Mr. J. T. Carrick, secretary of the first-named society, will be sorry to learn that Mr. C. W. Alty, of Lord Street, South Shields, and a member of both societies, has lost practically the whole of his very valuable stock of prize and prize-bred Norwich Canaries through cleaning operations. We all hope he will continue in the Fancy, however.

The annual balance sheet of the Scottish National Cage Bird Society is a splendidly successful document, and bears witness to the remarkable prosperity and vitality of the association. The cash in hand has been increased from £74 odd to £105 odd, and no fewer than 232 members' subscriptions are shown as paid. This eminently satisfactory state of affairs reflects the highest credit on Mr. J. Winter, the secretary and treasurer, Mr. A. C. Dandie, the president, and the remainder of the hard-working and enthusiastic officials.

I was very pleased, writes Mr. J. Hampshire (Oldham), to see a drawing of my old Lizard, "Silver King," on the front page of last week's CAGE BIRDS. Great credit is due to your artist for the life-like work of same. This bird was in the first three prizes every time he was exhibited last season, including 1st Scottish National, etc. He is credited with fourteen money prizes this season, consisting of Firsts Oldham, Notts, Horticultural Hall, and Palace, etc., which are all "records" as regards second year Lizards. He is father to the broken Cap Silver, which won Firsts at Pendleton, Scottish National, Palace, etc. I wish CAGE BIRDS, *the* paper which all fanciers should read, every success and prosperity.

GRAND DOUBLE NUMBER NEXT WEEK.

Cage Birds Annual

— For 1908 —

The Standard Guide to the Fancy,

IS

A MARVELLOUS SIXPENNYWORTH

—absolutely the best ever put before the Fancy.

MORE LETTERS OF APPRECIATION.

I think your ANNUAL splendid value.—P. Miles (Cavendish).

CAGE BIRDS ANNUAL is a real gem.—W. H. Barnes, secretary of the Newport and Monmouthshire C.B.S.

I have all CAGE BIRDS ANNUALS for previous years, and my advice to all fanciers is to purchase the ANNUAL for 1908 at once.—J. Hampshire (Oldham).

The CAGE BIRDS ANNUAL arrived with thanks, and as usual it is a treat for all genuine fanciers.—W. Nichols, hon. secretary, Lowestoft Dis. C.B.S.

The ANNUAL is a grand book of reference to the birdy man. It treats of every subject—British birds, Hybrids, all kinds of Canaries and Foreign birds—and ought to be in every bird keeper's house.—WALTER HENDERSON (Partick).

CAGE BIRDS ANNUAL to hand. I consider the publication to be an encyclopedia of Birdie information, which ought to be appreciated by all fanciers. The numerous beautiful illustrations add greatly to this most useful book.—Joseph J. Robson (Gt. Corby).

I received my ANNUAL, and I am sure it is really an admirable book, containing a great amount of valuable information. I know that all here in Newcastle who have got this year's issue are more than ever pleased with it.—J. G. Hutchinson, joint secretary of the Newcastle-upon-Tyne C.B.S.

I have received CAGE BIRDS ANNUAL, and must say it is a splendid piece of work on the Fancy. Pages 86 to 93 are more than worth the money, and are a boon in every bird room. No fancier should be without this year's ANNUAL. The plates are extra. You should hurry up, lads, and get one.—J. Sharp (Ossett).

CAGE BIRDS ANNUAL for 1908, writes Mr. J. T. Carrick, secretary of the Jarrow and Hebburn and District C.B.F.S., is a great credit to the compiler and publisher. The plates are simply grand, and reflect much credit on the artist. The articles without exception are splendid, and are a valuable source of information. The ANNUAL is the best and cheapest book ever brought before the Fancy, is a boon to all secretaries of societies, and is a book that every fancier should have in his bird-room, in fact cannot afford to be without.

A charming new cover, many beautiful illustrations of winning birds printed on art paper, a lovely coloured plate for frontispiece, a complete revision of all the popular features, and the addition of strikingly useful new features, mark this 1908 issue.

The articles, too, have never been excelled, and both Canary, Hybrid, British and Foreign bird keepers have been specially catered for. The needs of the beginner have likewise been given the fullest consideration.

Bird-lovers should hurry up and secure their copies at once. Get one Post Free by return by sending a

Management of Scotch Fancy and Belgian Canaries.

By THOMAS SMITH.

(*Continued from page* 221.)

If the bird-room is comfortable and adjoins the kitchen, there should be no need to have artificial heat in the room. As I have previously indicated, I do not favour the heating of the bird-room. Birds in condition will weather the cold, and as a rule are stronger and healthier than those subjected to heats and colds which are inevitable where artificial heat is resorted to, it being well-nigh impossible to maintain an even temperature. It is far better to wait in patience for a month or two, and steer clear of the risks which are sure to follow in the train of an early start.

Where artificial heat is an actual necessity, a strong effort ought to be made to maintain an even temperature, which can be done by adopting the best methods which are advertised from time to time in CAGE BIRDS. It is prudent to use every means possible to protect stock from draughts, and to have them comfortable; but on the other hand it is a mistake to have them so covered up that they can scarcely get enough air for breathing. Where protection is advisable from dust, etc., a piece of muslin cloth thrown loosely over the cage is sufficient. It has the advantage of being washable periodically; red mite take up their abode in the muslin in the daytime, and can be destroyed by immersing the cloth in boiling water—a very simple process, and very effective for getting rid of the pests.

Egg Binding.

Egg-binding is a common experience when a start is made in cold weather. It seems to be a severe strain upon hens to lay eggs in the bad weather. Many a good hen has been rendered useless for a whole year through egg-binding. Some hens never get over it.

When egg-binding is apparent the hen should be gently caught in the hand and held over steaming water, putting a piece of stiff cardboard between the vessel containing the hot water and the bird. A hole should be made in the cardboard, and the bird should be so held that the steam may rise around the vent, say, for ten minutes. Thereafter the vent should be painted with a little castor or olive oil, allowing a drop or two to pass inwardly, which can be done by holding the bird beak-downwards.

The hen should be put into a cage which has flannel in the bottom, and kept, say, in the kitchen or some place where there is a fire. The chances then are that she will drop the egg. A hen may do well enough after egg-binding, but it frequently renders her useless for a more or less protracted time.

Niger seed can be given every other day; it helps to keep the hens in condition, and is also an aid to preventing egg-binding.

The Removal of Stock.

It is a vexed question when a fancier has to remove his stock. It often happens at the very height of the breeding season. Leaving a house as a successor comes in, and entering another as the outgoing tenant leaves is a big task for the birds to undergo. Indeed, with an average stock the work is almost too much. In such a case loss is certain to arise; hatching suffers; hens leave their eggs; parents stop feeding the young; and after the stock gets into the new quarters, they become unsettled, and it takes a fortnight or a month before they again think of taking to the nest.

I have known hens removed while sitting on eggs and young. A cloth was put over the cage, in one case, and the bird was carried with the utmost care, and put into the new position. The hen kept to the nest, and continued, as if she had never been disturbed. That is the exception, however, and cannot be depended upon.

The fancier who thinks of removing should look ahead, and, if possible, secure an empty house, entering in February or March. If he has an average stock, it will pay him to give a little extra to have the privilege of removing gradually, and not later than March.

April, May, and June are the best months of the year for breeding Scotch Fancy and Belgian Canaries, and it is therefore all-important that operations should not be disturbed in May. In removing, the nests should be put into the cages, and the birds run in to give them a chance to start breeding right away.

On Pairing.

I recommend the keeping of each pair by themselves throughout the year, but if the one or both have been exhibited, this cannot be done, an exhibition bird having to be kept in a cage by itself, to keep it in good plumage. A first-rate plan is to pick out show-cages, run the birds into them, and place the cages side by side lengthways. It will reduce the chances of quarrelling. Commanding a good view of each other, a mutual attachment will spring up; the mate will break out into song, and his lady-love will jump about and become very big and smart. The male will feed her through the wires. After a few days of such conduct, they may safely be put into the breeding-cage, after which they will not be long in nesting.

Occasionally, a pair which have been selected will not mate, but will fight to the bitter end. I have known a cock to refuse to look at a green or piebald hen, but immediately take up with a clean or foul hen. I had a yellow cock who would not pair with a buff hen of any colour, and only bred with a clean yellow hen. He had his own idea, and his whim had to be granted, otherwise he would have been lost for breeding.

They have their own ways in many directions; it is wise to study their foibles. It takes time to master the temperament of every inmate of the room, but it pays. A vast amount of wastage goes on through insufficient knowledge on this point.

A Cock and Two Hens.

The practice of running a cock with two hens is quite general, and is usually successful. He should be put in with the hen that seems to be in best condition. Keep him with No. 1 until she has laid her full complement, and transfer him in the gloaming to No. 2, taking care that he is boarded off from No. 1 and will not be able to see her.

If they commence laying a fortnight apart, there is no reason why they should not be successful.

There is a false notion that a Scotch Fancy hen will not rear young, which I am convinced is formed by an inordinate desire of the breeder to rush the Scotch Fancy on, and, where a big stock of foster-parents is kept, to get as many eggs as possible, regardless of the injury that is done. Thus the Scotch Fancy hen is given no chance of trying to bring up her young. Give her the opportunity, and she and her husband will be as assiduous and successful as any common pair.

NUTHATCH.

Exhibited at the Crystal Palace Show by Mr. W. Binns, (Alne, Yorks.)

THE CRESTED CANARY IN AUSTRALIA.

The Use of Yellow Blood.

(*Continued from page* 245).

I would ask you, do you not think that during these many years we may have been making a mistake in double buffing so consistently? As a Plainhead breeder I would unhesitatingly answer yes. But as a breeder of Crests I cannot claim any wider experience than yourselves.

I suppose the reason why Crest breeders double buff so much is the desire to maintain the length and density of feather, which I believe is right as far as it goes. But it may also have an evil effect by producing harsh, coarse feathers, which I think is the last thing you want to produce if after a really good Crest, and this may be the reason why so many of our Crests here fail in droop, and if so, an infusion of yellow blood is certainly what we require. I have never heard that the yellow blood has a tendency to shorten the feather, but it will certainly soften and give it the silky texture required, and what you would lose in density would be amply repaid by the improvement in the quality of feather, and I contend that it is impossible to produce really high-class Crests unless you have an abundance of long, soft, leafy, silky feather to work upon.

While advocating the use of the yellow blood in Crest breeding, I do not want you to run away with the idea that I mean that you should use it as consistently as the breeders of the colour section do, unless you are breeding for yellow Crests, and then I would advise the pairing of yellow to buff and buff to yellow every time; but if you are only using to improve your buffs, then you would have to use your own judgment, and your skill as a breeder would be proved by the result.

All of you, I have no doubt, have noticed and been impressed with the wonderful quality of feather in the imported birds and their young ones that have arrived during the last few years. I know I have. The beautiful quality of feather is the first thing that catches my eye. How much superior it is to the old stagers that have been here so long, and the conclusion that I have long come to is this—that it is the expert manipulation of yellow blood that has turned out such a beautiful buff.

Description of a Typical Modern Crest Canary.

By E. SHARP.

The Crest.

The Crest should be of a large, expansive character, coming well over the beak, and equally full at the sides, with the back well padded, the feathers radiating from a well-placed centre on the crown of the head and falling, or drooping, evenly over the head in every direction, without any appearance of roughness or tilting, but lying close and compact. In shape it should approach as nearly as possible a circular form. The denser the crest the better, so long as the feathers lie in uniformity. The centre should be well filled, just allowing the maximum space necessary for feathers, leaving no apparent vacancy, or, in other words, what we should call a neat, small centre.

The feathers should be broad and leafy, with a nice vein or mid-rib, which gives a finish with telling effect to a good crest. The beak should be short and neat. The neck should be full, commonly known as a good "bull" neck, expanding well into the shoulders. The body stout, and full in chest, after the Norwich type, of good size, with a good broad back, nicely arched. The tail and wings short and proportionate to the body, both well carried, the wings finishing off neatly at the root of the tail, without crossing, and the tail close and compact; the legs short and the thigh well clothed. The body feathers of good length and quality, being as close as possible, so as to show the true outline of the bird. In position it should take a firm stand across the perch.

The Crest-bred.

The first important point in a good show Crest-bred is the head. The skull must be well developed, broad and massive, and as wide in the entrance or forehead as possible, with an expansive back. It should be densely clothed with thick, long, leafy feathers, well padded at the forehead, which gives, as it were, an abrupt stop. This abruptness displays the wide entrance off to perfection, and gives a splendid rise to the forehead, wasting gradually away as the rise passes over the middle of skull. The weight of feathers, starting as it does from the forehead, falls gradually over the sides of the skull as it travels towards the back, giving the bird a sullen or frowning appearance, known as "lashing" or "beetle-brow."

The lashing is when the ends of the feather display themselves over the eyes and sides of the skull, and are plainly to be seen, but the "beetle-brow" is when the centre of the feathers, as it were, is pressed heavily down over the eyes and sides of the skull, by the weight of dense feathers on the skull, the ends of the feathers not being displayed, but remaining in close contact with the skull, travelling towards the back, hidden, as I said before, beneath the weight of feather. One eye-brow is as valuable as the other, so long as the entrance is good, and the top of the skull densely clothed, and the hood or back of skull broad and expansive, with good rise over top of skull, showing no flatness.

The beak should be short, thick and neat, with a good moustache over the nostrils and whiskers round the sides of the base of the beak—*i.e.*, the short feathers that grow contrariwise at the junction of the skull and beak. The gullet and throat should be broad and expansive, with a good, short, full neck, frequently described as a "bull neck," running harmoniously into a pair of massive, broad shoulders. The body should be short and thick, back broad, chest (or breast) deep, with pair of good short wings, and tail well carried, standing well across the perch, on a pair of nice, short legs.

The Housing and Keeping of Foreign Birds in Captivity.

By WESLEY T. PAGE, F.Z.S., etc.

(Continued from page 194.)

The Buntings (*Emberizinæ*). — This group calls for but little notice as to treatment, diet, etc. That already given will cover their simple needs. Briefly, they require seed, insectile food, green food, and some live insects. With very few exceptions they will winter out of doors, in any suitably constructed aviary. If caged, they should have a roomy box cage, and be trained to have a fly round the room occasionally.

The Nonpariel Bunting (*Cyanospiza ciris*).—Unfortunately this lovely bird, which formerly was imported in large numbers, is now very scarce, owing to the importation of birds being prohibited from the United States; however, as these birds occasionally leak through via Mexico, they must have a place in this series. In build the Nonpariel Bunting is similar to, but a little smaller, than the Chaffinch. Unfortunately its gorgeous colouring is not retained for any lengthy period in this country, but in large aviaries, with growing plants and herbage, the beautiful scarlet is not entirely lost, and they still retain a large measure of their natural beautiful colouration. In a cage the lovely scarlet of the under surface soon changes to subdued orange-yellow. They are charming birds, and readily become tame.

Adult male: Head, cheeks and shoulders, ultramarine—blue; back, golden-green; rump, orange; upper tail coverts, yellow; tail, dullish green; wing feathers, mostly a bronzy-brown, with most of the outer edges golden-green; chin, throat, breast, abdomen, and under tail coverts, glowing scarlet; beak, legs and feet, dark grey; iris, hazel; eyelids, crimson.

The female differs in having no blue on the head, which is green; and her under surface is yellow.

The Indigo Bunting (*Cyanospiza cyanea*). — This is another beautiful species, once common, but now very rare in this country, for the same reasons which apply to all American species, and which are already given under preceding species. It ranges over the Eastern United States, and in colour is a beautiful bird indeed, and has this advantage over the Nonpariel, that it retains its full natural beauty in captivity. I have found it perfectly harmless in a mixed series, though it has had for some of its companions the smallest waxbills.

In colour the adult male is practically one even hue, viz., rich cobalt-blue, though on the upper surface there appear traces of emerald green, and the wing feathers have their inner webs brown.

The female is a plain and unpretending, but shapely bird, plain brown above, but slightly tinged with blue; under surface, whitish-brown.

The Common Golden-Breasted Bunting (*Emberiza flaviventris*).—Two specimens of this fine species made their advent on the show bench at the late Palace Show. It is a most handsome bird, the markings and contrasts of its beautiful plumage giving it quite a brilliant appearance, though its apparel is not gorgeous. It ranges over practically the whole of southern and tropical Africa, extending northwards to the Congo and Abyssinia. It is a beautiful species either for cage or aviary.

Adult male: Head and sides of face, black, with five white longitudinal bands, one down the centre of the crown, extending to the neck, and two on each side of the head, above and below the eye and ear-coverts; neck, greyish; upper back, rich cinnamon-brown, most of the feathers with buffish edges and blackish centres; wings blackish-brown, crossed with two white bars; tail, blackish-brown, with the three outer pairs of feathers having their lower portion mostly white; chin, abdomen and under tail-coverts white; throat and breast golden yellow, with the centre of the breast washed with golden-rufous; beak: upper mandible dark-brown, lower pale-yellowish; iris, rich brown; legs and feet, flesh colour. Total length $5\frac{3}{4}$ inches, of which the tail measures $2\frac{3}{4}$ inches. Description from the two birds at the Crystal Palace Show, 1908.

Captain Shelley describes the female as similar to the male, but with the mantle more mottled, the head browner, and the whites not so pure. "They are extremely tame and fearless in their habits, like all the S. African Buntings I have met with; feed much on the ground in open bush country, but are sometimes found in thickly wooded localities, and if disturbed, only fly a few yards before settling again on the ground. Only occasionally do they perch on low bushes or trees, much oftener on stones and rocks. They feed largely upon insects, especially upon small beetles, less frequently upon seeds. In Spring the brilliant cocks sing their Bunting-like notes from the summit of low bushes or stones, a monotonous and oft repeated 'zizi-zizi-zee,' with the stress on the last syllable. About the month of October the female proceeds to build her nest of dry grass-stalks, lined with finer grass and hair, in a low bush at the foot of a rock, or among the roots of herbage on a ledge, and towards the beginning of November lays four or five eggs. They are white, thickly marked all over with scrawls and hair-like zig-zag lines of very dark purplish brown or black. . . . In other districts the nest has been found at a height of 6 to 10 feet, and seldom or never on the ground. . . . The nest is cup-shaped, and $2\frac{1}{4}$ inches across." (Shelley's "Bird of Africa," Vol. III.).

Swainson's Golden-Breasted Bunting (*Emberiza affinis*).—Similar to *flaviventris* but has the whole of the back cinnamon-brown, no white wing bars, the under surface of the body being yellow, ventral region, white. According to Captain Shelley, its range is Senegambia, the White Nile and Sennaar.

The Samoli Golden-Breasted Bunting (*Emberiza poliopleura*).—Captain Shelley gives its range as Somaliland, Shoa, and Southern Abyssinia. It differs from *flaviventris* in having the upper surface much more mottled, the centres of the feathers being distinctly blackish; the yellow on throat and breast is also more restricted in area.

Cabanis Golden-Breasted Bunting (*Emberiza cabanisi*).—This species is common in Western and Central Africa, and is recorded as resembling in song and habits the English Yellow-Hammer. It is similar to the preceding, but is more greyish on the upper surface and the wings are principally dusky-blackish, greyish crown-band, and only one facial band or eye streak. There is yet another Golden-Breast, the Greater (E major), which ranges over tropical Africa, and is very similar in general appearance to the preceding species. Space can only be spared for one other of the African species.

The Southern Cinnamon-Breasted Rock Bunting (*Fringillaria tahapisi*).—A fine specimen of this species has been exhibited for the past two seasons by Mr. S. M. Townsend. Though not as brilliant as the Golden-Breasts, it yet is a very handsome species, and at present a very rare bird in this country. Captain Shelley gives its range as South of a line drawn from the mouth of the Gaboon river to Aden.

The following description is from Mr. Townsend's fine male: Head and throat, black, divided with seven white bands, one down the centre of the crown from the base of the upper mandible to nape, on each side of this a similar band extends from the nostrils to rear of ear-coverts, while below the eyes there are similar bands extending from the gape and enclosing the cheeks, the last pair of bands extending across the sides of the upper throat; the upper surface is blackish-brown, with paler edges; the wings are also blackish-brown, with narrow pale-brown edges; tail, blackish; the whole of the under-surface is pale cinnamon-brown, with the exception of the upper throat, which is black, mottled with white; iris, rich nutty-brown; beak, upper mandible brownish, horn-colour, lower, yellowish; legs and feet, yellow. Total length, $5\frac{3}{4}$ inches, of which the tail measures $2\frac{3}{4}$ inches.

Its natural food is small seeds and insects. The nest is mostly placed on or near the ground. The nest is cup-shaped, rather deep, and but lightly constructed of grass and rootlets, lined with hair. The clutch consists of 3 or 4 pale greenish-white eggs, thickly spotted and blotched with ruddy-brown and yellow.

(To be continued.)

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. It kills all insects, harmless to everything else.

Observations on some British Finches.

By J. S. CRAWFORD.

Of our many classified British birds the members of the Finch family are perhaps the most beautiful, and it is with these I purpose dealing. No doubt much has already been written, and many splendid plates published of them, to which Cage Birds had added its share though its pages, and which, of course, all go to familiarise strangers with the originals. There are many who know the Finches only behind cage bars, one and all of them being very suitable cage birds, but my object in this article will be to deal with them in their wild state, among their native haunts, where they are likely to be found, and with their nests, eggs, and song.

The "Bully" Described.

First in my notebook comes the Bullfinch (*Pyrrhula europæa*). This bird has indeed a bull-like appearance, with his thick-set head covered with a cap of deep black, and it is no doubt owing to his prominent head that "Bully" derives the prefix to his name. For the benefit of those not quite familiar with the Bullfinch, it may be advantageous to describe him, and also the other members of this interesting group dealt with, so I will insert a description of each Finch as I go along.

The cock Bullfinch, as already noted, has a deep black head-covering, this colour coming well below the eye; the crown is somewhat flattish, and the bill is a little hawk-like. He has a deep red breast, with shoulders and back bluish-ash, belly and rump being white, legs dusky brown, and claws black. The hen Bullfinch is more soberly clad than her mate, the breast and back being dullish brown or greyish-brown in colour.

The Bullfinch inhabits well-woooded districts as a rule. Like the Robin and Tits, it retreats from our gardens and orchards further afield in the spring, and during the summer months is found feeding on insects, and also berries of various kinds. When winter again comes round he draws nearer the habitation of man, and his diet then consists of hips and haws, groundsel and dock seeds. The Bullfinch will sometimes visit our bird-tables in hard weather, but his visits are rare.

For such a handsome and tidy fellow the Bullfinch is somewhat of a slovenly nest builder, and not an early one at that, as May is usually ushered in before the home of the Bullfinch is found, although an occasional nest may be taken in April. His nest is constructed of twigs and rootlets woven together, the former usually being placed at the base of the structure, and is lined with hair, feathers, and wool, and is ofttimes placed in a high hedge some distance from the ground, though more often in a fir or other tree. Five is the usual number of eggs laid, and these are of a ground-coloured greenish-blue, spotted and streaked with dark purple-brown marks, and mostly towards the larger end, but I have seen this fairly well distributed over the egg in some cases.

Like his nest, his song is not of much account, being somewhat harsh in tone, but he has a plaintive call-note. His powers of imitation, however, are wonderful. In confinement he can be taught to pipe a tune deliciously, and no doubt from this comes the term "Piping Bullfinches." He is altogether a splendid cage bird and much sought after by keepers of British birds. The hen will also breed in the cage with the Canary, the young of the pair being known as Mules. I would here point out that there is a Bullfinch known in the trade as the "Siberian Bullfinch," which is a much bigger bird than our native Bullfinch.

An Object of Sport.

The deadliest enemy the pretty Bullfinch has is the gardener, and I would here beg reference to the old animosity that exists between the fruit-grower and the Bullfinch. Now the gardener maintains that the Bullfinch destroys his berries, which, of course, cannot be denied, but I am of opinion that it is more owing to the grubs which are to be found in these berries that the Bullfinch destroys the fruit. Again, I would ask, does the gardener never prune his bushes? Many feasible arguments have been put by present-day writers, but I fear to very little effect, as the Bullfinch is still harassed by the gardener and his shot-gun wherever he may appear and whenever the gardener may get an opportunity. Further, I consider it only fair to argue that the Bullfinch be examined at other times of the year, and not solely at the time of the buds and the ripening of the fruit, and would point out, as already explained, that the Bullfinch is a destroyer of injurious insects, and surely this should make a counterbalance, and if there is any doubt on the matter, I feel inclined to give the bird the benefit of this.

I would also mention that on one occasion I happened to see a couple of Bullfinches (male and female) as part of the bag of a Sparrow Club. How the members of these Sparrow Clubs come to class the Bullfinch with the much-harassed Sparrow I am at a loss to understand.

The Sprightly Goldfinch.

Next on my notebook comes the Goldfinch (*Carduelis elegans*), known also as Goldie, Thistle Finch, Goldspink, King Harry Redcap, Proud Tailor, Red-fronted Thistle Finch, etc., the young being known in some localities as Grey Pates or Grey Heads. Like the bird previously dealt with (the Bullfinch) the Goldfinch is most conspicuous about the head, the front being deep or blood red, hence the term "Red-fronted Thistle Finch," and he has also been called the "Seven-coloured Linnet." He is the most handsome of his family, and has been termed the most beautiful of British birds, and there can be no doubt he rightly deserves his title. In size he is about five inches, has a black collar at the back of his head, with the front of head and feathers round the base of the bill deep or blood red; the cheeks, front of neck, and under-parts being white, except for patches of light-brown each side of the breast; back, dark brown; wings, variegated with white, yellow, and black; the tail also being black, tipped with white. He is a very sprightly and beautiful Finch withal, and is a very useful one to the agriculturist.

The Goldfinch builds a very pretty and neat nest, this being similar to that of the Chaffinch (next Finch having attention), though smaller in size, and it is usually found about the beginning of May, though, if the winter has been mild, like the Bullfinch, a nest may be found about the last week in April. The nest is placed in the fork of an apple or other fruit tree, but sometimes in a thick bush, and the bird also favours the fir at times. The nest is constructed of green bents, moss, lichens, thistle, and yellow down, feathers, hair, and wool, but a good deal depends altogether on the locality and the materials it affords.

The eggs, of which there are usually five, are bluish-white or pale grey, spotted with bluish-purple and red-brown, and sometimes sparingly streaked with same. The Goldfinch has a very pleasing and harmonious song, which endears it to all keepers of British birds as a cage bird.

(To be continued.)

PRINTED NOTE PAPER AT COST PRICE

Until further notice we have decided to supply artistic Memorandum Forms with name, address, twelve words of particulars, and block of any special variety, at the following cheap cash prices:—

250 for 2/-, 500 for 2 6.

Carriage paid to any address in the U.K.

Our latest style of note-head has been universally admired, and we will gladly send specimen to any one enclosing stamped addressed envelope.

F. CARL, "Cage Birds," 154, Fleet St., London.

ILLUSTRATED IDEAS

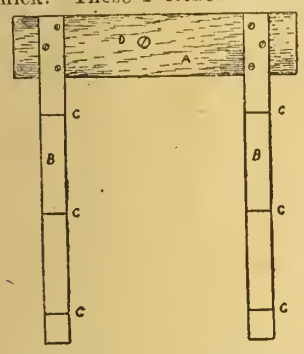
Under this heading we shall illustrate weekly same ideas useful to the bird keeper. Readers are invited to send us particulars of any novel and practical appliance of use in our hobby, either in cage, bird-room or aviary, with a rough sketch of same where possible. Every "Illustrated Idea" used in this column will entitle the sender thereof to a postal order for two shillings and sixpence.

No. 187.

A DEVICE FOR HOLDING PUNCHED BARS WHILST SOLDERING.

Sent by W. E. Tomkinson, 380, Station Road, Winsford, Cheshire.

This is the sketch of a frame for holding punched bars square whilst making cage fronts and soldering with a candle or lamp. First I get a board 16 in. long by 5½ in. wide, as per A. Next I get two pieces, B, 22 in. long, 1½ in. wide, by ⅝ in. thick. These I either screw or nail



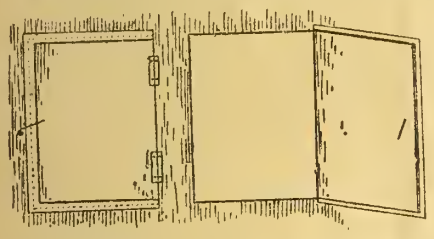
on to A, keeping them parallel to each other. The lines across marked C are sawgates cut square across, and about ¼ in. deep, to put punch bar in. D is a screw for holding frame firm on bench or table and so leaving arms of frame clear to get candle under. Of course, you cut the sawgates as far apart as you want your punch-bar, then put your wire through the punched bar and apply the solder.—W. E. Tomkinson.

No. 188.

HOW TO PREVENT DRAUGHTS THROUGH CAGE DOORS.

Sent by F. M. Ford, "Blantyre," Perrymount Road, Hayward's Heath, Sussex.

Enclosed is a sketch showing a good way of preventing draughts through doors at the ends of cages. You will often



find these doors will, either through shrinking or bad fit, let in draughts. So I take four strips of American cloth, ½ in. wide, and glue these to the edges of the door, leaving about ¼ of an inch projecting over the edge. Sketch A shows the cage door shut, and in B the door is open. In both sketches I have illustrated the narrow strip of American cloth, which is shown by the narrow white edge surrounding the door.—F. M. Ford.

The Appetite of Birds.

Mr. Oliver Pike has made some estimates as to the supply of food a man would require if, for his size, he ate as much as a bird: For breakfast one dozen eggs, a full-sized loaf of bread, and twenty pork sausages. Lunch would consist of 6lb. of steak, half a loaf of bread, followed by two legs of mutton and a fair-sized plum pudding. For afternoon tea we should just have a genoa cake weighing about 1lb., and our dinner would consist of 2lb. of fish, a whole fowl, 4lb. of roast beef, with ten potatoes, and two large cabbages, followed by a pudding weighing 6lb. and 4lb. of fruit. Not a bad day's work for one person! Yet this, weight for weight and bulk for bulk is less in proportion than some birds consume in one day. The Kingfisher will consume almost its own weight of food each day A lapwing will swallow four huge worms and then look for more. A Robin tackling a worm 3 or 4 inches in length and gradually getting it end down his throat succeeds in doing what appears to us an impossibility. The capacity of a tame great Black-backed Gull was tested by offering him some dead Sparrows which had just been shot for the purpose. He swallowed five, feathers and all, after first crushing them.

Have you given the notice respecting CAGE BIRDS' ANNUAL for 1908 your attention?

FANCIERS' FESTIVITIES.

Shipley O.S.

The annual dinner and concert was held on February 18th at the headquarters, "Victoria Hotel." An excellent repast was served up by the host and hostess, Mr. and Mrs. Proctor, to which members and their wives did full justice. At the proceedings which followed, Mr. H. H. Towers occupied the chair. An excellent array of talent had been provided, and a most enjoyable evening was spent. Mr. H. Holmes (bass) contributed with "Angus Macdonald" and the "Veteran's Song" in fine style. Mr. B. Smith (tenor) sang Ross's "Tell her I love her," and Mr. R. Cordingley (bass) was heard to advantage in the songs "Till Death" and "The Gauntlet." The chairman, Mr. Towers, added to the programme with the song, "The Carrier Dove," and Mr. and Mrs. Crossland brought down the house with "The Gipsy Countess." The comedian engaged, "Jolly Butch of Bradford," caused a deal of merriment with his songs. A vote of thanks to the artistes and the host and hostess, and the singing of "Auld Lang Syne" and the National Anthem, brought a most enjoyable evening to a close. The Society is in a flourishing condition, a balance of between £7 and £8 being in the bank at the beginning of the year. All fanciers are invited to join.

H. Dobson, Secretary.

Cambridge C.B.S.

The annual dinner of the Cambridge and Cambridgeshire C.B.S. took place on February 26th, at Ye Olde Castle Hotel, when upwards of 60 members and friends took part in the proceedings. These included Councillors R. Starr and C. Arnold. Mr. A. E. Brooks took the chair, and was supported by Messrs. Doggett and W. Linsey. In proposing "Success to the Cage Bird Society," Mr. W. E. Pegg said it was a pleasure and a pride to him to be allowed to propose this toast. Although not a fancier from an exhibitor's point of view, he always kept a few birds, and he thought everyone who could should do so, and interest the young in these beautiful little creatures that went to make life a continuous song. He appreciated the objects of the society, and their endeavours to instil in the young a love of cage birds. Messrs. Brooks and Doggett responded. Mr. Brooks thanked the proposer of the toast for his kind appreciation of the work done by the society. Between six and seven years ago one or two fanciers met together and after anxious deliberation decided to form a Cage Bird Society with a membership of six. The roll now numbered 63, and was constantly being added to. At this point of the proceedings Mr. Pegg presented the Hon. Secretary, Mr. T. S. Moore, with a barometer as a mark of esteem from the members, and in recognition of the excellent services he had rendered them as secretary. Mr. Pegg said Mr. Moore was an old and valued friend of his, and he was sure the society could not have a more energetic secretary or one more anxious for its welfare. They had not forgotten Mrs. Moore, and he asked acceptance on her behalf of an electro-plated teapot When the society did anything, they did not do it by halves, and to Mr. J. Gifford he had much pleasure in presenting on their behalf a cheque, in appreciation of the work he had done as assistant secretary. Mr. Moore said he could not sufficiently thank the members for their kindness to himself and Mrs. Moore. The barometer, he hoped, would not be symbolical of the society. A barometer was a thing that fluctuated; and the Cambridge C.B.S. never fluctuated; it was a progressive society and never looked back, and he assured the members he would do his best to keep it so. Only the other week at the Crystal Palace one of their fanciers, Mr. W. Linsey, had secured gold and silver medals for cage making, and they were determined to capture other prizes. Mr. Gifford also returned thanks. In replying to the toast of "The Honorary Members," Mr. Tom Coward said it did his heart good to see so many fanciers present, and he could only say of the branch of the Fancy in which he was particularly interested that he would like to see such a muster. Mr. G. W. Lawson also responded. Mr. A. E. Edwards proposed "The Visitors," to which Councillors Starr and Arnold responded, both gentlemen expressing sympathy with the aims of the society, and assuring the members of their support. T. S. Moore.

Dulwich and Peckham C.B.S.

A "House Warming" Concert was held at the new headquarters, "The Montpelier," Choumert-road, Peckham, S.E., on February 20th. Between 90 and 100 members and friends met to celebrate the removal of the headquarters. The weather was about the worst that could be for such a function, but the programme was such that those present were amply repaid for their journey in unpleasant weather. In the regrettable absence of the Chairman, Mr. R. L. Crisp, through illness, the chair was occupied by Mr. F. S. Mathes, and the vice-chair by Mr. H. E. Tringham. About 30 ladies were present. The proceedings were opened by a pianoforte solo by Mr. Herbert Holland, I.S.M., who rendered "Valse Brilliante" in a very able manner. Mr. H. W. Reeves, a new acquisition to the Society, then gave "The King's Own," his performance evoking much applause. Mr. Arthur Bolton sang "Nirvana," to the especial pleasure of the ladies present. Mr. H. J. Field then rendered in a masterly manner "Lighterman Tom," which failed to satisfy the audience, inasmuch as he was compelled to sing an encore, "The Corporal's Ditty." Mr. A. White, who possesses a good tenor voice, then sang "My Dreams" and "River of Dart." Mr. Herbert Townsend then showed that he also possessed a rich vein of humour by singing at the piano, "Love, if you'd only told me." Mr. W. Stoker then gave a treat to the lovers of more serious items by singing "The Sailor's Grave." At this point the Chairman rose to thank the audience for their presence, explaining that the social evening they were there enjoying was thought by the committee to be an excellent manner in which to bring the members to see the Society's new home and to cement a feeling of good fellowship among them. He then called upon the Vice-Chairman to read a large pile of letters and post-cards expressing sympathy with the committee, and wishing them a successful evening. These were from many ladies and gentlemen who are held in high esteem by the Fancy generally: Mesdames Lewer and J. E. Reeves; Messrs. F. Carl, G. Crabb, A. E. Crowhurst, Lewer, Norman-Reed, J. W. Ramsden, J. E. Reeves, J. A. Simpson, J. B. Waterman and G. E. Weston, and several others. The Vice-Chairman then read a letter from Mr. R. L. Crisp, which showed that their efforts to raise the Society back to the position it held previous to the late show was being noticed and appreciated. Mr. Crisp said that, as a unit of the Society, he considered himself morally bound to bear his share of the loss incurred, and enclosed a cheque for one guinea. This brought us to the second part of the programme, which proved more enjoyable even than the earlier part. Mr. Herbert Townsend opened with a musical sketch at the piano, which was "an improvisation on that well-known melody 'Bill Bailey.'" Mr. Bolton next gave two songs, "Two Eyes of Grey," and "I know a lovely garden," following these up with "Freedom," from "The Greek Slave." Mr. Reeves rendered "The Trumpeter," and Mr. Field "My Old Shako" and "The Windmill." Mr. White gave "Those Azure Eyes" in very pleasing manner, after which Mr. W. Stoker sang "The Devout Lover." The concluding item was an excellent recitation by an old friend and committeeman, Mr. A. Cunningham, entitled "The Yarn of the 'Nancy Bell.'" The evening was now far advanced, and upon the proposition of Mr. Lugg, a hearty vote of thanks to the Chairman was accorded with musical honours, to which a suitable response was made by Mr. Mathes. Mr. Cranfield next proposed a vote of thanks to the vice-Chairman, who, in replying, said that the whole of the committee were working earnestly and harmoniously to uphold the honour and dignity of the Society, and were all pledged to do everything in their power, but nothing that did not become a man and a fancier, to further the Society's interests. It also fell to the duty of the vice-chairman to propose a hearty vote of thanks to the artistes who had so generously given their services, remarking that the programme provided had been absolutely clean and wholesome, and altogether of a high standard of merit. Mr. Meredith next proposed, and Mr. Cranfield suitably responded, to a vote of thanks to the musical sub-committee for having arranged and carried out such an attractive programme. One ring round the room for "Auld Lang Syne," and "God Save the King" brought to a close the first social gathering of its kind ever held under the auspices of this Society.

H. E. Tringham (Chairman of Committee).

Darlington C.B.S.

A very enjoyable evening was spent by the members on Feb. 14, at their club-room at the Half Moon Hotel, on the occasion of the club supper. The attendance was not so large as expected, owing to unforeseen circumstances; many members were not able to get away from business. The host and hostess, Mr. and Mrs. Henderson, had provided an excellent spread, which called forth many appreciative remarks from those present after the removal of the cloth. Mr. R. Todd, who presided, opened the proceedings with the usual loyal and patriotic toasts, and then called upon Mr. Will Finlay, pianist, to give a selection, "The Diabolo March," the pianist's own composition. Afterwards Mr. Tony Molloy gave us one of his specialities in the form of an Irish song, "Pat Finnigan," in characteristic style, while Mr. J. Martin, who followed, regaled us with another comic "Get it over quick." Then Mr. Stapleton sang "In Friendship's Name." Mr. W. Allan proposed the toast of the evening: "Success to the D.C.B.S.," and said that the Society was progressing and was one of the best in the North. He also had great pleasure in asking the Chairman, Mr. R. Todd, to present to the Secretary, Mr. Brunskill, a purse of gold subscribed by the members of the Society in recognition of the work he had done for the Society since its formation, and he was sure that the success of the shows held was in a great measure due to the work done by the Secretary. He hoped they would have his services for some time to come. In collecting the subscriptions from the members he had found every one very willing to give, and all spoke well of the manner in which the Secretary had carried out his duties. Mr. Todd, in presenting the purse, said that he had very great pleasure in doing so. He could say that in the Secretary they had "one of the best" to be found in the North, always willing and straightforward, and with all show details at his fingers' ends. He had made the shows held by the Society the best ever held in Darlington, and he could say without fear of contradiction that they could not find a harder worker in the country. In asking him to accept the purse and contents, he could assure him of the goodwill of all the members of the Society. Mr. Brunskill, in responding, said he had great pleasure in accepting the kind present. He asked them to accept his thanks. As they were all aware, he had done the work without any expectation of reward, and so long as the shows had been a success, and the Society had gone ahead, he had been satisfied. All had worked very well together, and he hoped the Society would continue to prosper. He felt obliged to Mr. Allan for the trouble taken in collecting subscriptions for this presentation. Speaking for the Society he was pleased to say it kept making progress and adding to the number of members each year. He hoped they would be able to make their shows the best in the North of England. The toast was received with musical honours. The rest of the evening was spent in harmony, the following contributing: Mr. E. Lees, "Dreams" and "Woman's Ways"; Mr. Stapleton, "Sing me to sleep"; Mr. T. Reed, "The Barney Castle Militiaman"; Mr. Jas. Molloy, "Billy Muggins"; Mr. Tom Molloy, "Barney Quirk's Christening"; Mr. P. Carter, "The Organist"; and Mr. W. Underwood, "Queen of the Earth."

The most serviceable, striking, yet tasteful and economical

LIVE BIRD LABELS

are those obtainable from "Cage Birds."

For the convenience of readers we have had printed a quantity of address labels suitable for use when despatching live birds on journeys by rail, etc. These are printed in red ink on paper gummed at back, and are

THE YOUNG NATURALIST.

Prizes of 1s. and two of 6d. each will be given each week for the best three anecdotes about birds written on postcards. Competitors must be children under sixteen years of age, and must state from where stories are taken.

Two stars indicate the Winning Contribution; one star the runners up.

A Naughty Magpie.

A Magpie built its nest in a tall tree near a large house. One day the lady of the house left a valuable diamond ring on her dressing table, the window being open the Magpie flew in and seeing the ring flew off with it to its nest. A servant was accused of the theft and sent to prison. Sometime after, during a great storm the tree was blown down and the ring was found in the nest, thus proving the girl's innocence. Taken from "The Basket of Flowers." Sent by Doris Lycett, age 11. Apedale View, Chesterton, Staffordshire.

*Likes His Feet Washed.

Having seen the picture of a Bullfinch in Cage Birds I thought I would write and tell you about mine. He has been caught just over twelve months and is very tame, much tamer than some Canaries we have. He will take seeds from our fingers. I give him sunflower seeds; is very fond of them and I also give him apple pips and any other wild seeds and berries I can get. I have to wash his feet as they get so dirty, but he likes having them washed. Sent from Hilda Turner, Camfield Cottages, Hatfield, Herts, aged 12 years.

**A Sparrow's Coolness.

A passenger, who was waiting for a train in one of the underground railway stations, observed a Sparrow hopping upon the rails in search of crumbs. A train came into the station from the direction in which the passenger wished to travel, and he had leisure to watch the Sparrow. It allowed the engine to come within a few feet of it, and then, instead of flying away, it quickly hopped off the rail upon which it stood, and hopped into the space between the rails. There it lay until the train puffed out of the station, when it jumped upon the rails again, and resumed its search for crumbs. Presently another train entered the station, and the Sparrow was seen to repeat its previous action, and to take refuge once more between the wheels of the train.—Taken from "Chatterbox." Sent by George Carrick (age 14 years), 13, King's-terrace, Maryhill, Glasgow.

*The Lark and the Greenfinch.

Beside a door two cages hung:
From one a Lark's clear music rung;
A Greenfinch twittered in the other.
When, passing near them with his mother,
A little boy, delighted, heard
The tones of the melodious bird.
"Come," said his mother, "Can you say
"Which bird is trilling that rich lay?"
"Oh," cried the child, "the one in green,
The prettiest bird I've ever seen;
For surely that which looks so plain
Could never sing so sweet a strain."
"Nay, child," the mother said, "you're wrong.
'Tis he pours forth that thrilling song.
Look closely now—see how his throat
Is quivering with each rising note;
And never judge of birds or men
By outside finery again!"

—Taken from "Chatterbox." Percy King, age 8 years, 89, York-street, Cambridge

CLUB REPORTS.

MORPETH AND DIS. C. AND C.B.S.

The society is going ahead like wild-fire. We had our second meeting on February 28th, and the interest and enthusiasm shown by all present speak well for the future success of the society. Ten gentlemen gave in their names wishing to join us, and after being formally proposed were duly enrolled as members. Their names are as follows:—Messrs. Ellison, Johnson, Rowcroft, Lockey, Laidler, Graham, Moore, Johnson, Mayland, and Clark, bringing the total number up to date to 24. It was decided that we appoint two judges to officiate at our forthcoming show. We hope shortly to arrange lectures, etc., for the benefit and encouragement of our younger members. E. COWLING.

LONGTON AND DIS. C.B.S.

A well attended meeting was held at headquarters, Castle Inn, Feb. 18, when the following officials were elected: Mr. E. Tams, chairman; Mr. J. Davies, vice-chairman; Mr. J. Edwards, treas.; Messrs. C. Birks and H. Perrings, auditors; and all members on the committee. It was decided to hold the annual show on October 3rd, and to fix the date for the First Feather Show at the next meeting. Also that we join the Cage Bird Union. Mr. T. Bould, Blyth Bridge, has promised to give a silver medal to the member who breeds the best light Hybrid this season. Mr. J. Davies, Prospect-place, Longton, has promised a pair of birds, valued at 10/6 (or money) to the member who gets most points at shows with Canary bred by himself in 1908. A meeting is to be held on the first Tuesday in each month at the Castle Inn, at 8 p.m.—T. J. SIERS, Sec.

PLUMSTEAD & WOOLWICH C.B.S.

At the general meeting held on February 20th at headquarters a good deal of business besides the pair show was got through. A good programme was drawn up, and it was decided to hold the annual show on the same day as last season—that is, January 7th and 8th, 1909, and Mr. Robson has been engaged as one of the judges. The annual open show, which was held within five months of the formation of the society, was a success, and speaks well for the society's future. The balance-sheet was passed, showing a small deficit, but with stock in hand to more than cover it. Mr. Easterling kindly gave his reasons for placing the awards as stated, and was accorded a warm vote of thanks by the members. The following new members were elected:—Messrs. W. J. Munckton, High-street, Hambleton, Hants; A. Hopper, 136, Sandy Hill-road, Plumstead; E. Fowler, 457, Woolwich-road, Charlton. W. LAWRY, Hon. Sec.

MACCLESFIELD AND DIST. C.B.S.

On February 22nd a dinner was held. It was the first since the society's formation, the society being now three years old. A goodly number were present, and with the tempting things set before them by Mr. Shatwell, at his dining rooms, Macclesfield, all went pleasantly. After dinner the secretary read the balance-sheet, which showed a balance in hand of £11 19s. 6d. This was well received, and came in for some kind remarks from Councillor W. Thompson, a strong supporter of the Society. The toasts of "The Hobby of Cage Bird Keeping" and "The Officers of the Society," were proposed by Councillor Thompson and Mr. W. Lee, our chairman. These toasts were drunk, and were followed by selections from the phonograph by Mr. H. Wallworth, songs by Messrs. F. Broadhurst and J. Clarke, and a recitation by Mr. J. Snape and H. Wallworth. We spent a right good social evening, and we hope this will be followed by many more. Mr. C. Oliver, treasurer, proposed a vote of thanks to all who had helped in making the evening one which, he thought, had been thoroughly enjoyed, and this brought the evening to a close.—F. BROADHURST, Hon. Sec.

SEAHAM HARBOUR AND DIS. C.B.B.A.

On Feb. 22, we had our annual general meeting. There were only seven members present; almost all the rest were down with that fashionable complaint, influenza. However, we got through the business very well. Our chairman resigned on account of his business. We made six new members, four of them from the neighbouring colliery village of Ryhope, and from what I learned from the member who proposed them, there are others to follow. We are not having our open show this season, but intend to have two members' shows, one at Ryhope and one at Seaham. There may be more when we get a start. The balance-sheet, as read by the secretary, was accepted as satisfactory, and when all bills and debts are paid we will have only a few shillings in hand, which is a big difference compared with last year, when we had somewhere about £4 10s. in hand. We lost a trifle over the open show. The next business, the election of officers, resulted as follows:—Chairman, Mr. J. Pickering; vice, Mr. F. Joy; committee, Messrs. J. Hudson (late chairman); W. Cockerill, G. Hills, M. Elliott, R. Harrison and M. J. Wilkinson; banking stewards, Messrs. Harrison and French; assist. secretary, Mr. H. Dobson; secretary, Mr. J. M. Nicholson, 7, Sophia-st., Seaham Harbour. We are open to take members from any part of the district and fanciers may do so any time. Subscriptions, first year, 7 - and 5 - afterwards.—J. M. NICHOLSON, Sec.

CITY OF BRADFORD O.S.

The usual fortnightly meeting was held at the Flying Dutchman Hotel, on Feb. 29th. Mr. T. Fortnam (President) occupied the chair. We had the delegates' report, and other matters of importance were gone through. The chairman said he wished to draw attention to what he considered a most important matter, and one which called for explanation from some source or another. He referred to the report in the Press of the Cage Bird Union meeting. In reply to one of the delegates, who advocated a working arrangement with the Yorkshire Union, Mr. Lythgoe was reported to have said that he had tried to come to an understanding with the Yorkshire Union, and had been in communication with the secretary (Mr. Hammond), but found the conditions were such that no arrangement was possible. He was at a loss to understand why such an important matter had never been heard of or discussed by the City of Bradford O.S., who were in membership with the Yorkshire Union, and he would like to know if the Council of the Union had dealt in any way with this suggested working arrangement, and as Mr. Hammond, a member of the society, was present, he proposed, with the consent of the meeting, to ask him if he was in a position to explain matters. Having gone thoroughly into all details and after reading the correspondence (which up to now Mr. Hammond had treated as private and confidential at Mr. Lythgoe's request), the meeting unanimously passed a resolution approving Mr. Hammond's action and expressing entire and unabated confidence in him as secretary of the Union. Several members expressed a wish that the matter might be brought before a meeting of the Yorkshire Union Council.—F. RHODES (Secretary).

ASHTON-UNDER-LYNE AND DIS.

The members met at their headquarters on February 29 to listen to a lecture on "The Management of the Bird-room," given by Mr. W. A. Bladon, which proved to be very interesting. A good number of questions were answered by the lecturer, and a very pleasant evening was brought to a close by a vote of thanks to Mr. Bladon, proposed by Mr. W. Foxall, and seconded by Mr. H. Grime.—H. FODEN, Hon. Sec.

SOUTH LONDON COL. AND F.A.

Points gained at late pair show for points' cup, 1908, as follows:—Mr. J. Palmer, 27; Mr. H. J. Horton, 24; Mr. F. Johnson, 21; Mr. G. F. Males, 21; Mr. S. Harris, 17; Mr. G. Munday, 15; Mr. F. White, 14; Mr. A. Biss, 11; Mr. L. J. Richardson, 5; Mr. G. Kearney, 4; Mr. F. Bizley, 4; and Mr. A. W. Hollands, 3.—G. A. JEFFERY, hon. sec. and treasurer.

LUTON AND DIS. C.B.S.

The society held a general meeting on March 2nd, when it was decided to join the C.B.U., and the annual open show is fixed for November 4th. Mr. J. Robson is engaged to judge. We feel sure that with the success attending our last open show, fanciers will rally round us again, seeing that Luton is only 30 miles from London on the main line, and with a good train service. After the close of the business, our worthy chairman, Mr. G. Bennett, made a touching speech, thanking the members and friends who contributed towards a fund for defraying the cost of a pair of birds belonging to our secretary, Mr. E. Cherry, he having sustained a very heavy loss through septic fever, of over 70 birds, including all his Canaries, British and Foreign birds. Some were purchased at big figures, and were well-known winners. The sum collected was £3.

GATESHEAD AND DIS. C.B.S.

At the last meeting correspondence was read from Messrs. Vardy, Heath, Bennett, and Parker Robinson, the nominated judges for our next show, December 11 and 12. Messrs. Heath, Bennett, and Parker Robinson were finally elected satisfactorily, while Mr. Vardy's appointment was left open, owing to a prior engagement. Five new members were elected, Messrs. E. Hooper, J. Adams, W. F. Swann, J. Turner, and J. Riseborough. These gentlemen received a most hearty welcome into the ranks of the Palace of the North. It was agreed to hold a nest feather show on June 20, and that arrangements be made for same at an early date. We have learned since meeting that a gentleman has offered a splendid room for N.F.S. and £2 towards expenses of show, per Mr. A. Brown. I am sure he will receive the hearty thanks of the members. Fanciers are invited to join at once. Membership is open to all. Next meeting, March 18.—THOS. TAYLOR, Hon. Sec.

ALNWICK AND DISTRICT C.B.S.

We have arranged to hold our monthly meetings at the Temperance Hotel in Bondgate-street the last Wednesday in every month, this being a suitable date, at 8 p.m. prompt. The following officers have been chosen:—President, Mr. Gilhanders; vice-presidents, Captain Howe, Messrs. Malone, Brodie, Ireland, A. Tate, and Philip Archer; chairman, Mr. A. Moir; vice-chairman, Mr. M. Swan; secretary, Mr. R. F. Rennison; assist. secretary, Mr. J. Robinson; treasurer, Mr. T. Tennent; committee, Messrs. W. Millar, R. Weatherilt, T. Wake, H. P. Strig, W. Knox, W. Landers, W. Straughan, T. M. Tate, J. Knox, J. Snowdon, and E. Beswick; auditors, Messrs. W. Landers and J. Robinson. With a membership of 50 in all, we have fixed our subscription at 2s. 6d., with an entrance fee of 6d. The radius has been fixed at 10 miles. The secretary will be only too pleased to forward all the necessary information re membership to anyone desiring same. Our show date has been fixed for October 31st.—R. F. RENNISON, Hon. Sec.

SOWERBY BRIDGE AND DIS. C.B.S.

The annual meeting was held on Feb. 22nd, at the Bull's Head Hotel. Our President, Mr. C. A. Davis, in the chair. There was a good attendance of members. The secretary gave us the report of the past year's work, and also read the balance sheet. Every member was satisfied with this, as we were left with a balance well on the right side. Considering this is the first year of the existence of this society, things have gone well and with every prospect of a much better future. The society have held a series of monthly shows for most points to count at end of season, the result being as follows:—1st, Messrs. Taylor and Haigh, 45 points; 2nd, S. H. Jeffries, 27 points; 3rd, A. E. Morton, 25 points; 4th, E. Crossle, 11 points; runner-up, Mr. E. Pipond, 13 points. The society has doubled its membership; it now consists of some 30 members and has hopes of receiving more. We are trying very hard to buy a cup to be won in competition amongst its members next season, the winner to hold the cup for 12 months; if any friend would care to help us in this matter the secretary, Mr. A. E. Morton, 3, Devon-street, Parkinson-lane, Halifax, will be very glad to hear from him. We are confident the society has a good time in store. On Friday last the members and friends held a smoking concert. There was a good attendance, and a right jovial evening was spent. In the absence of our President, Mr. E. Crossley took the chair, and Mr. E. Sutcliffe acted as secretary in the absence of Mr. Morton, who was ill with influenza. Mr. E. Sutcliffe presented the prizes to Messrs. Taylor and Haigh (gold medal), Mr. S. H. Jeffries (copper tea urn), Mr. A. E. Morton (silver-plated jam dish), and Mr. E. Crossley (silver spoon), each suitably responding. The members, as a surprise, presented the secretary with a handsome hand bag, for which he heartily thanked one and all. The programme was of a very high order, each artist deserving of the highest praise. Messrs. H. Tasker, Kenyon, McEwan, Clegg and Iredale contributed. Thus ended the first year of the society.—ONE WHO WAS PRESENT.

HOUSE'S
CANARY MANUAL
Price ONE SHILLING. Post Free 1.2.
Superbly illustrated by the Champion Canary Artist Mr. H. NORMAN. EVERY BIRD DEPICTED IS A VERITABLE MODEL, and shows the breeder what to aim for. Some idea of the popularity of this Practical Manual may be gathered from the fact that under the title of "The British Canary," it has passed its Third Edition, entering upon a Fourth Edition of 5,000 copies under the new title of "HOUSE'S CANARY MANUAL." MR. HOUSE has thoroughly revised and brought this work up-to-date and incorporated a chapter on the "Roller or Singing Canary."
F. CARL, 154, Fleet St., London, EC.

THE SHOWS.

TONBRIDGE AND DIS. F.A.

A members' show was held on February 26 at the Red Lion Hotel Assembly Room, and it proved a great success. Although wretched weather prevailed it did not damp the enthusiasm of our members and friends, who turned up in good numbers. The cage bird classes were judged by Mr. F. Wraight.

NOR. (16): 1, Barkaway; 2, 4, vhc, Warner; 3, Richards; vhc, Smithers; hc, Mrs. Kirke; hc, B. Kirke. YORKS. (10): 1, 2, 3, Knapp; 4, hc, Taylor; vhc, c, Warner. A.O.V. (10): 1, Barkaway; 2, Smithers; 3, Holland; 4, Peters; vhc, Whitehead; hc, Haines, Priest; c, Palmer. BRIT. (9): 1, 4, Warner; 2, hc, Peters; 3, Whibley; vhc, Richards. FOR. (9): 1, Dennis; 2, Hepworth; 3, 4, Peters.

ROCHDALE O.S.

The annual British and Foreign bird show was held in club rooms on February 29. There was a grand collection of birds; in fact, it was the finest show that has been held in Rochdale for the last ten years. Mr. L. Butterworth judged, and he gave every satisfaction.

GOLDFINCH: 1, spl, Entwistle; 2, Pratt; 3, Parker; 4, Walton; vhc, Woodall; hc, Naden; c, Ratcliffe. BULLFINCH: 1, Woodall; 2, 3, spl, Entwistle. BROWN LINNET: 1, spl, Entwistle; 2, Walton; 3, Hilton; 4, Naden; vhc, Barrass. GREENFINCH: 1, spl, Entwistle; 2, Pratt. A.O.S. BRIT.: 1, spl, Barrass (Thrush); 2, Walton (Chaffinch); 3, Ratcliffe (Redpoll). MULES: 1, hc, Pratt; 2 vhc, Butterworth; 3, 4, Entwistle; c, Naden. FOR.: 1, 2, spl, Pratt, 1st pair of yellow Budgerigars, 2nd green Budgerigars.—J. BUTTERWORTH, Sec.

WEST BROMWICH AND DIS. C.B.S.

The first table show of members' matched pairs was held on February 25 at the Dartmouth Hotel. A very good entry was made, and considering the youth of the society, the quality of the birds was distinctly creditable. Mr. A. Paddock, of the Birmingham C.B.S., judged the Yorkshires, and Mr. A. Broadhurst, president of the Birmingham Society, the other classes. The Yorkshires, both numerically and in quality, were the best section, some very good birds being exhibited.

YORKS. YELL. CK. and BUFF HEN: 1, 3, Collier; 2, Beck. BUFF CK. AND YELL. HEN: 1, Collier; 2, Broadway; 3, Key. NOR. YELL. CK. and BUFF HEN: 1, Carter; 2, Capewell; 3, Jennings. BUFF CK. AND YELL HEN: 1, 3, Capewell; 2, Viles. HYBRIDS: 1, Goldfinch cock, Bullfinch hen; 2, Greenfinch cock, Bullfinch hen; 3, Goldfinch cock, Bullfinch hen, Green. MULES: 1, Viles, Goldfinch cock, Norwich Yellow hen; 2, Beck, Linnet cock, Yorks. Yellow hen. CREST: 1, Viles, Crest bred cock, Crest hen; 2, Carter, Crest cock, and Crest bred hen. After the exhibits had been inspected the members were given an interesting and helpful lecture by Mr. Paddock upon the breeding of Yorkshire Canaries.—W. E. J.

BRADFORD (West) C.B.A.

The first of the members' quarterly show was held on Feb. 29th at Red Lion Hotel, Girlington. There was a good attendance of members and friends, the entries numbering 111, champion classes 58 and novice classes 53. Mr. R. Carr judged, and gave great satisfaction.

CHAMPION CLASSES: CL. ETC. YELL. YORKS: 1, Wood; 2, 3, hc, Crabtree; 4, Wallbank; vhc, Clark; c, Clegg. BUFF: 1, Crabtree; 2, Clark; 3, vhc, Clegg; 4, hc, Cowgill. GREEN SELF ETC.: 1, Turner; 2, Graham. CHAMPION AND NOVICE CLASSES: A.V. CAN. OR MULE: 1, 4, vhc, Inman; 2, Cowgill; 3, hc, Clark. BRIT.: 1, 3, vhc, Inman; 2, 4, Wood; hc, Cowgill; c, Wallbank. SELL. (12/6): 1, Clark; 2, Cowgill; 3, vhc, Bolton; 4, Wood; hc, Wallbank; c, Mail. Specials for most points, four highest birds to count. CHAMPION SECTION: 1st, 5/-, T. Wood; 2nd, 3/-, T. H. Inman; 3rd, 2/- (tie), T. Clark, and W. Crabtree. NOVICE SECTION: 1st, 5/-, R. Graham; 2nd, 3/-, W. Hellewell; 3rd, 2/-, W. Armstrong. Special for best bird in show, T. Wood.—H. Clegg, Sec.

GLASGOW AND WESTERN COUNTIES N.C.M.B. AND F.B.C.

A monthly meeting and pairs show was held in the Good Templars' Hall, 122, Ingram Street, Glasgow, on February 29. The president (Mr. Geo. Martin) presided over an average attendance. The following gentlemen were admitted to membership:—Messrs. R. Frew (Wishaw), D. King (Coatbridge), Geo. Sommerville (Auchenheath), Thomas Anderson (Bridgeton), Wm. Paterson (Motherwell), K. Donald (Kirkintilloch), Wm. Shearer (Hamilton), and D. Knox (522, Allison Street, Govanhill). The following are the classes for show to be held on March 28:—Goldfinch, British, Foreign; Linnet; Greenfinch; and Siskin. Entries for pairs show exceeded those of former years by forty pairs, and the judges, Messrs. Edwards, Moffatt, J. Roulstone, and Young had quite a lively time in selecting the winners. It speaks volumes for their judgment, as they came out of it with flying colours.

CL., ETC., NOR. PAIRS (11): 1, McFarlane; 2, Malcolmson; 3, Connelly; 4, vhc, Renfrew; hc, McInnes; c, Roddie. TICK, ETC., VAR. (14): 1, spl., McFarlane; 2, Shearer; 3, McInnes; 4, spl, Marlin; vhc, spl, Connelly; hc, Roddie; c, Brannigan. CL., ETC., BORDER PAIRS: 1, 3, Brannigan; 2, Renfrew. PAIRS, A.O.V.: 1, Thomson, Junr., Scotch Fancies; 2, spl., Adam, Lizards; 3, Pettigrew, Cinnamons; 4, Thomson, Junr., Scotch Fancies; vhc, Drysdale, York.; hc, spl, Roddie, Yorks.; c, Henderson, Yorks. HYBRID PAIRS (21): 1, spl., hc, Pettigrew; 2, Brannigan; 3, Henderson; 4, vhc, Lawson; c, Connelly.—J. H. ADAM, Sec.

SALE OPEN O.S.

A table show of Greens and Borders was held on Feb. 24. Mr. Sam Hadwin (Liverpool) judged, and gave every satisfaction, he afterwards spoke on the winning birds, and gave the fanciers present some good hints on the breeding of these two varieties. Several questions were put to him, which he answered to everybody's satisfaction. A vote of thanks was passed him for his very able remarks. Messrs. C. F. Worrell and W. A. Buskey, of Altrincham, and D. Leigh, of Levenshulme, were elected members of the society. SELF, ETC., YELL. GREEN NOR. COCK: 1, 2, 3, 4, vhc, Harrison. BUFF: 1, 2, 3, Harrison. YELL. HEN: 1, 2, Harrison; 3, Irlam. BUFF: 1, 2, 3, 4, Harrison; vhc, hc, Irlam. YORKS. GREEN CLASSES, cancelled. YELL. GREEN BORDER: 1, Bayley; 2, Wardleworth. BUFF: 1, Bayley. YELL. BORDER CK.: 1, 2, Bayley; 3, Wardleworth. BUFF: 1, Wardleworth. YELL. HEN: 1, 2, Bayley; 3, Wardleworth. BUFF: 1, 2, Bayley; 3, 4, vhc, hc, Wardleworth.—GEO. F. HARDCASTLE, Sec.

PLUMSTEAD & WOOLWICH C.B.S.

The society held their pair show on February 20th, when there was a good attendance. There were 54 entries; the quality, especially in Norwich, was grand. The muling pairs were also very good. The same remark applies to the British birds. Mr. F. Easterling judged.

CHAMPION YORKS.: 1, Bulgin. NOR. (8): spl, 1, 3, vhc, c, Meades; 2, Daniels; hc, Bulgin. NOVICE YORKS. (4): 1, 2, 3, Putner; vhc, Hall. NOR. (11): 1, 2, vhc, Russell; 3, Allison; hc, Wood; c, Hopper. CREST (2): 1, Newnham; 2, Mrs. Carden. BRIT. GOLDFINCH (6): 1, 3, Allison; 2, W. G. Simants; vhc, C. Wood; hc, Mrs. Smith; c, Daniells. BULLFINCH (3): 1, Mrs. Carden; 2, Hawkes; 3, Pawley. LINNET (6): 1, Allison; 2, hc, E. Simants; 3, c, W. Simants; vhc, Putner. GREENFINCH (1): spl best Brit., 1, Allison. A.O.V. 1, 2, E. Simants; 3, W. Wood. PAIRS FOR MULE OR HYB. BREEDING (7): 1, Weaver; 2, vhc, Meades; 3, W. Simants; hc, Hall; c, Daniells.—W. PAWLEY, Sec.

GREAT HORTON GOOD INTENT O.S

The adjourned annual general meeting was held on February 29th at headquarters. The following were elected officers for the ensuing year:—President, Mr. Geo. Riley; vice-presidents, Messrs. Newell, Briggs, Gornall, and D. Hollas; hon. treasurer, Albert Holden; hon. secretary, Harry Schofield; assist.-secretary, S. L. Whitely; Y.U. delegates, Messrs. Whitely and Rushworth. The balance-sheet was read and passed, and it was found that the society was in a sound position. It was also passed that we hold four members' shows—one first feather and three old birds shows. There were eight money specials allotted for all four shows, the four highest to count, each member to count at each show. The first show was held on February 29th, there being a fair entry. Some good birds were staged. Mr. A. Firth won a framed picture for most points in show. The following were winners of points at this show:—Messrs. Firth, Holden, Whitely, Schofield, Briggs, and Newell. Mr. H. Sutcliffe, of Windhill judged, and gave general satisfaction.

YELL. YORKS.: 1, Holden; 2, Firth; 3, Newell; 4, Whitely. BUFF: 1, 4, Firth; 2, Whitely; 3, Briggs. YELL. HEN: 1, Chubb; 2, Schofield; 3, Brook; 4, Whitely. BUFF: 1, Brook; 2, Holden; 3, Briggs; 4, Newell. CINN. MKD.: 1, Pinder; 2, Holden. HENS: 1, Firth; 2, Schofield; 3, 4, Holden. YORKS. STOCK BIRDS: 1, Whitely; 2, Firth; 3, Holden. PAIR CLASS: Void. A.V.: 1, Holden; 2, Whitely; 3, Firth.—HARRY SCHOFIELD, Hon. Sec.

LONDON AND COUNTIES A.C.B.

The third annual spring show of British, Hybrids and Foreign birds was held on Feb. 29, at the "Bay Malton," Great Portland-street, W., when entries turned up exceedingly well. It was a fine show throughout, and reflected great credit on the Association. There was a good attendance at the fixture. The success of the exhibition is due in large part to the able efforts of the Hon. Secretary, Mr. R. J. Pretty; nothing was awnting on his part, and he is deserving of every praise. Mr. S. Cook judged, and gave entire satisfaction.

GOLDFINCH (11): 1, spl, vhc, Quantrell; 2, R. J. Pretty; 3, Handt; hc, Goodall; c, E. Pretty. FIELD-MOULTED (6): 1, Adamthwaite; 2, Stacey; 3, Quantrell; vhc, Sparkes; hc, Tringham; c, Armstrong. BULLFINCH CK. (5): 1, spl, Morrison; 2, spl, Hawes; 3, hc, Adamthwaite; vhc, Tringham. HEN (7): 1, Thorpe; 2, hc, Morrison; 3, E. Pretty; vhc, Stacey; c, Adamthwaite. Great Horton O.S. hold their second members' show of the season this Saturday (March 14th), at the meeting house, the Butchers' Arms, Great Horton, writes Mr. J. Holroyd, the secretary. The judge will be Mr. W. Cruise, the notable winning fancier from Bowling. Birds staged at 3 p.m.

The judges are now engaged for our show to be held in the Co-operative Hall on October 17th, writes Mr. J. Ford, secretary of the Kelty and Blairadam C.B.A. The gentlemen elected are:—For Scotch Fancies, Mr. D. Low (Dundee); for Border Fancies, Mr. J. Patterson (Chirnside); for Norwich, Mr. J. Adam (Dundee); and for British and Foreign Mr. R. Farmer (Edinburgh).

Kindly announce that we have moved our headquarters from Plimsoll Arms to Castle Hotel, Commercial Road, Newport, Mon., writes Mr. W. H. Barnes, secretary of the Newport and Monmouthshire C.B.S., this being a much more suitable place for the purpose of holding meetings. It has an up-to-date accommodation, and meetings in future will be held every Saturday at 7.30.

We learn that Mr. C. P. Arthur, the well known Melksham foreign bird enthusiast, is unavoidably compelled to dispose of all his stock, which he is advertising this week. He writes: It will almost break my heart to get rid of all my birds just now, and dismantle all my aviaries and my bird-house, which have cost me altogether about £150, independent of their inmates.

It is now, writes Mr. W. H. Bamsey (Derby), about two months since my serious operation took place, but I am glad to say I am getting on as well as can be expected, though slowly. I am still very weak on the legs, but I hope with brighter weather to make better headway. I must thank you for the sympathetic references in CAGE BIRDS, also those readers who have sent personal enquiries after my health. I am sorry to say I have to part with most of my birds, keeping only a pair or two for pastime—for without birds I should think I was quite lost.

NEXT WEEK: SPECIAL SPRING NUMBER

OUR next issue will be our Special Spring Double Number and, as usual, a marvellous budget of topical and practical articles of intense interest to all keepers and breeders of birds. It will be lavishly illustrated and contain

A most charming Coloured Plate,

by an artist new to readers of "CAGE BIRDS," so far as coloured work is concerned. This work of art is on somewhat novel lines and we anticipate it will be very popular as a subject for framing. Be sure you get it.

2D. Place an order at once with your newsagent and make sure of getting this Grand Double Number. 2D.

TO ADVERTISERS: Our Spring Special Number is always a wonderful business getter, and probably the finest issue of the whole year in which to **announce what Stock you have for Disposal.** Sales are certain, for in the Spring buyers are many and eager.

All announcements MUST reach us by Tuesday's post, March 17th, at latest.

Be in time—You cannot afford to miss this opportunity.

F. CARL, Publisher, 154, Fleet Street, London, E.C.

The members of Prescot C.B.S. have once more met to consider the carrying on of the society, writes Mr. A. Wellings, as several young fanciers have started in the town. The society has been at a standstill for want of fanciers, and not for the want of funds, as there is still £7 0s. 2d. in the bank to its credit. It has been decided to have a show on March 21st for members. The society is open to any distance members, and the subscription is 2s. 6d. per year. Fanciers wishing to join can do so on communicating with me at 8, Rowson Street, Prescot, and I will hand their names to the hon. secretary, Mr. J. Platt, to be put before the meeting.

SCOTTISH NATIONAL C.B.S.

The annual general meeting was held at headquarters, 142, High Street, Edinburgh, on February 29, the President, Mr. A. C. Dandie, presiding over a large number of members. The minutes of the general and committee meetings for the past year having been passed, the balance-sheet, showing a credit balance of £30 16s. 10½d. on the year's working, was discussed and adopted on the motion of Messrs. A. Rodger and E. G. Wright. The total balance in hand is £105 6s. 2d., leaving the Society in a sound financial position. Votes of thanks were accorded to Miss Peddie Waddell, Messrs. J. Brown, R. Brown, W. Aitchison, S. Buglass, T. H. Buchan, and several others for special services rendered; also to the President, secretary, and committee for the conduct of business during the past year. A motion re election of judges was passed, and the election of office-bearers was then proceeded with. A motion by Mr. Aitchison that representatives from each section be appointed its committee to work entirely for their own section and nominate their own judges to place before the general meeting for election, was defeated, as was also the motion, by Mr. Welsh, that committees be paid. It was intimated that arrangements were being made with a gentleman to lecture on "Wild Bird Life," under the Society's auspices, the subject to be illustrated by limelight views, the date to be announced later. A hearty vote of thanks to the chairman brought a very successful meeting to a close. Next meeting to be held on Saturday, March 21. The election of office-bearers for 1908-9 resulted as follows:—Hon. president, Mr. Wm. Grant; hon. vice-presidents, Messrs. Bailie Stevenson, W. Aitchison, J. Brown, A. G. Cameron, F. A. Watt, G. M. Brotherston, and T. Arnot; President, Mr. A. C. Dandie; vice-presidents, Messrs. Jas. F. Dewar, L. J. Arrighi, E. G. Wright, and R. Craig; secretary and treasurer, Mr. Jas. Winter, 11, Parkside Street, Edinburgh; committee, Messrs. A. Cochrane, A. Foster, S. Buglass, T. Todd, A. Rodger, A. W. Watson, J. D. Melrose, J. Smeaton, J. Ross, D. Kinlayside, J. Hutchison, W. Holton, W. F. Arrighi, M. Finnie, R. Martin, A. Gorrie, J. Kay, W. Mather, W. R. Dunn, R. Mackay, J. Drysdale, W. Carson, J. W. Buist, J. R. Miller, D. Morris, P. West, Rankin, and Denis; auditors, Messrs. G. M. Brotherston and P. Green.—JAS. WINTER, Sec. and Treas.

A SPECIAL OFFER

To Users of Fluid Beef and Meat Extracts.

We invite the readers of "Cage Birds" to test for themselves the advantages of the new preparation for making Beef Tea, Gravies, Soups, etc., called Fluid Ju-Vis. Fluid Ju-Vis is Beef strengthened and vastly improved in flavour by the addition of Vegetable Extract. Fluid Ju-Vis is solely a Beef and Vegetable product and contains no adulterant whatever. In Fluid Ju-Vis you get about double the usual quantity for the same money and we are satisfied that you will decide that it is at least equal in quality and flavour to any Extract you have used. Send to your grocer for a 6½d. bottle to-day.

FREE SAMPLE.

If any difficulty in obtaining Fluid Ju-Vis, write us for a Free Sample. A Post Card will do. Sufficient will be sent (absolutely free) to enable you to prove its exceptional quality for yourself. G. Foster Clark and Co. (Dept 27), Maidstone.

SINGING CONTESTS.

LEEDS.

Weekly singing contest held at King's Head, Sbannon-street, on March 7th, when 20 birds sang. Some very good singing was heard. 1st prize, C. Biss; 2nd, T. Summers; 3rd, T. Johnson. Judges, Messrs. Towers and Crane. Also on March 8th, when 30 birds sang in heats. 1st prize, C. Biss; 2nd, T. Johnson; 3rd and 4th shared by C. Biss and T. Summers. Judges, Messrs. T. Hineson and C. Cooper.—T. SUMMERS, Hon. Sec.

YORK.

Usual weekly Linnet singing contest held at Bricklayers' Arms, Palmer Lane, Hungate, March 7, when 28 birds faced the judge. Result: 1, 5, Limhert; 2, Key; 3, 4, Chaplin; 6, Laverick; 7, Massheder. Judge, Mr. J. Paver; timekeeper, Mr. J. Limhert, sen.—W. EMPSON.

Linnet contest at Crown Inn, Nortb Street, on March 27, when 27 birds sang for six prizes. The following were the principal prize-winners:—1, Watson; 2, Moore; 3, Stothard; 4, Horwell; 5, Bean; 6, Oxberry. Judge, Mr. W. Perry. Timekeeper, Mr. J. Firth.—J. W. SMITH, Secretary.

SHEFFIELD.

Contest at Don Inn, Carbrook, when 20 birds sang for three prizes for three minutes hanging. Knights, 50; Booker, 44; Watson, 39. Judges, Messrs. Bollington and Lank.—H. TIMMS.

RYHOPE.

An open Linnet contest was held at the Grange Hotel, Ryhope-road, when 28 birds sang for three prizes. Results were: Machin 1, McDonald 2, Cope 3. Judge, Mr. G. Lilley; timekeeper, J. Mason.

LEIGH.

An open contest was held at the Standard Mower on February 29, in connection with the Shepherd's Inn L.C. for time-singing. Thirty-two birds were entered:—1, 4, Slatham; 2, Rowlands; 3, Howard; 5, Jones; 6, Boydell.—W. E. WILCOCK, Hon. Sec.

DURHAM.

A contest was held at the Albion House, Workman's Club, Usher Moor, Durham, on March 7. Thirty-four birds sang for five prizes given by the Society. Judges, Messrs. Reed (Brandon) and R. Walker (Usher Moor). Mr. Geo. Graham (secretary) had everything nicely arranged, and deserves credit for his management. The awards are as follows:—1, G. Robinson; 2, 3, W. Marchant 4, Jackson; 5, G. Graham. Visitors from all parts were present, and a pleasant afternoon was spent by all.—GEO. REED.

BLACKBURN.

The Blackburn Linnet S.A. held their Shrovetide all-England singing contest for quality on March 7 at Old Red Lion, Snigbrook, when 40 birds competed for six good prizes. This entry beat all previous records. Prize-winners are:—1, D. Bentley; 2, Lady Green; 3, P. Blacksbaw; 4, J. W. Jones; 5, George Rostron; 6, W. B. Bentley. Judge, Messrs. J. W. Jones (Leigh), J. Janes, and W. H. Topping (Blackburn). Also week-end contest, February 29, for three good prizes; 1, G. Rostron; 2, 3, P. Blackshaw. Judge, Mr. G. Jones; timekeeper, R. Topping. Also March 9 for three prizes: 1, G. Rostron; 2, T. Rench; 8, J. Harrison. Judge, Mr. W. H. Topping; timekeeper, C. Topping.—G. ROSTRON, Assistant Secretary.

P.S.—Look out for our great all-England contest on Easter Saturday. First prize, timepiece, valued 21s., and seven other valuable prizes. Entrance fee, 1s. Old Red Lion, Snighrook, Blackburn.—G. R..—ADVT.

A CHALLENGE.

SIR,—Answering on behalf of Mr. J. Scarfe, I am willing to sing you, Mr. Biss, on the terms you mention, viz., one hour's quality singing, for £5 and upwards, any bird in Yorkshire, hang on the nail in the window. If you wish to make a deposit in this paper, I will cover it at once, and with regard to the judges, and where we sing, and the date, we will arrange between the first and the last deposit. Only fair business meant.—P. DEARLOVE, Hull.

Western Counties O.S.—Mar. 16, Borough Arms, Bank Street, Plymouth, 7.30. Paper on "Mules," by Mr. R. Browning.—T. Pope.

Wibsey and Dist. C.B.S.—Mar. 14, Horse and Groom Inn, 3. Members' show. Judge, Mr. J. Wilson (Sandy Lane). Birds staged at 3 o'clock.—E. W. Johnson.

Wombwell and Dist. C.B.A.—Mar. 14, Railway Hotel, 7.30. Contributions and date of show.—C. Gleadhall.

CLUB NOTICES.

One notice of any forthcoming Society meeting inserted free. It should reach us by Tuesday morning's post. Specially printed Club Notice Postcard may be had free on application to our Manager.

Secretaries should always use them.

Belgrave and Dist. F. and F. S.—Mar. 24, New Inn, Loughborough Road, 8. General business.—W. H. Riley.

Bermondsey and Dist. F.S.—March 17, Samson Castle, Grange Road, Bermondsey, 8.30.—A. Lupton.

Birkenhead C.F.A.—Mar. 17, Temperance Hall 8. British Bird show. Mr. Mallinson, judge. — J. Richardson.

Brighouse and Dist. C.B.S.—Mar. 17, Round House Inn, 8. Special business.—F. Mitchell.

Bradford West C.B.A.—Mar. 14, Red Lion Hotel, Girlington, 7.30. Business: Members' tea and social at 8.30 p.m. Mr. J. Clarkson (Halifax) will give a lecture. Members and friends cordially invited.—H. Clegg.

Cardiff C.B.S.—Mar. 19, Maskell's, 8. Annual meeting, auditors' report, election of officers, payment of members' show prize-money, fix dates of shows, etc.—W. Sampson.

Coventry O.S.—Mar. 18, Sydenham Palace, 8.30. Pair show, A.V. Canaries, matched for breeding.—G. Peters.

Crook Original C.B. and R. and P.S.—Mar. 18, usual place, 7. First feather and open shows, selection of judges for first feather show. Fanciers invited.—A. Bowes.

City of Bradford O.S.—Mar. 14, Flying Dutchman Hotel, 6. Annual dinner and social.—F. Rhodes.

Dewsbury and Dist. C.B.S.—Mar. 14, Royal Hotel, 7.30. Annual meeting, election of officers, and other important business.—B. Cook.

Dulwich O.S.—Mar 18, Herne Tavern, Peckham Rye, S.E., 8.30. Lecture by Mr. G. F. Woolhouse, on "The Management of Canaries during the Breeding Season," and discussion on same.—Rogers and Mazzoni.

Eccles and Dist. C.B.S.—Mar. 18, Grapes Hotel, Peel Green, 8.30. Business, important.—A. Wheatley.

Glasgow and Western Counties N.C.—Mar. 14, 122, Ingram Street, 6.30. Committee meeting, arrangements for ramhles, lectures, washing exhihitions, judging competitions, etc.—J. H. Adam.

Great Horton O.S.—Mar. 14, beadquarters, 8. Special business.—J. Holroyd.

Garston B.B.A —Mar. 18, Wellington Hotel, 8. General business.—A. Wilkinson.

Glasgow and West of Scotland N.M.B. and F.B.C.—Mar. 17, Bank Restaurant, Queen Street, 8. Smoking concert; programme provided by Messrs. R. B. Gibb and Duncan Graham. Fanciers cordially invited.—R. A. Brown.

Gateshead and Dist. C.B.S.—Mar. 18, Lockhart's Cafe, 7.30. Arrangement for first feather show, etc. —T. Taylor.

Highgate, Hampstead, and Dist. C.B.S.—Mar. 20, Spencer Hall, 8.30. Lantern lecture with coloured slides, entitled "Cock Robin and Co., Ltd.," given by Mr. F. B. Kirkman, B.A. Fanciers, bring friends. —W. Reynolds.

Houghton-le-Spring and Dist. C.B.S. — Mar. 14, White Lion Hotel, 7.30.—H. Fenwick.

Halifax O.S.—Mar. 14, Griffin Hotel, 8. Mr. W. Cruise (Bradford) will give a lecture on "Pairing, Breeding, and Rearing the Yorkshire Canary." Friends invited.—J. F. Thackray.

Kent County C.B.A.—Mar. 19, Engineer Inn, Dover, 8.30. Instruction meeting, chairman and others purpose bringing pairs of birds by way of illustration, commenting thereon, and invite discussion, questions, etc.—G. Sanderson.

Leek and Dist. C.B.S.—Mar. 19, Headquarters, 7.30. Leek and Potteries Federation. Note alteration of time.—R. Hall.

Leicester and Leicestershire Hand-in-Hand C.B.S.—Mar. 17, White Swan Hotel, 8. Table show, British and Mules. Judge, T. Ride.—C. Draper.

London and Counties A.C.B.—Mar. 15, "The Bay Malton," Great Portland Street, W., 8.30. "Pedigree Breeding." By Mr. W. A. Bladon. President Cinnamon Canary Club."—R. J. Pretty.

London and Provincial O.S.—Mar. 19, The Raglan, Aldersgate Street, E.C., 8. "Questions Evening." All Fanciers welcome.—H. Lambert Brown.

Llanelly and Dist. C.B.S.—Mar. 14, Bird-in-Hand, 7.30.—J. Simon.

Manningham C.B.A.—Mar. 14, Mowbray Arms, 8. Classification of members' shows.—F. Western.

Manchester and Northern Counties O.S.—Mar. 16, Deansgate Hotel, 7.45. Lecture by Mr. S. Dean, Great Horton, on "The Yorkshire Canary." All fanciers invited.—E. H. Jones.

Middleton O.S.—Mar. 16, Old Boar's Head, 8.—H. Thomas.

Morpeth and Dist. C. and C.B.S.—Mar. 20, Vose's Refreshment Rooms, 7.30. Business very important. —E. Cowling.

National British B. and M.C.—Mar. 16, The Napier, High Holborn, 8. Club show cages.—Plumbridge and Carr.

North Manchester C.B.S.—Mar 17. Christ Church Schools, Harpurhey, 8. Lecture on "Border Fancy," by Mr. F. Wardleworth (Altrincham). Fanciers and friends invited.—J. Davey.

Preston O.S.—Mar. 14, headquarters, rooms of the Preston Scientific Society, 7. Amendment of rules, appointment of judges, and to consider various partonages.—W. H. Heathcote.

Pelton Dist. C.B.S.—Mar. 14, Fleece Inn, Old Pelton, 7. General business: New members specially invited.—L. Hall.

Plumstead and Woolwich C.B.S.—Mar. 19, Trinity Schools, 8. Balance-sheet of pair show, and demonstration of cage-making.—W. Pawley.

Queen's Park and Dist. C.B.A.—Mar. 19, Emmanuel Hall, Harrow Road, W., 8. Important business. —J. C. Birch.

Rochdale O.C.—Mar. 17, Club-rooms, 7.30. Lecture, "Pairing of Canaries."—J. Butterworth.

Scottish National C.B.S.—Mar. 25, Protestant Society's Hall, George IV. Bridge, 8. Lecture by Mr. James C. Adam, entitled, "In Bird Haunts with a Camera," illustrated with over 150 limelight views. Fanciers and friends invited.—A. Cochrane.

Sowerby Bridge and Dist. C.B.S.—Mar. 14, Bull's Head Hotel, 7.30. Ordinary monthly meeting; members' annual subscription due.—A. E. Morton.

Swindon and Dist. C.B.A.—Mar. 14, Chorus Room, 7. Lecture by Mr. W. Manley of Bristol. "Canaries: Breeding and Management." He will also judge the matched pairs' show.—E. Allsopp.

Scottish National C.B.S.—Mar. 21, 142, High Street, Edinburgh, 5.30. Classification, election of judges, etc.—J. Winter.

Shipley O.S.—Mar. 17, Victoria Hotel, 8. Lecture on Yorkshires, by Mr. Sam Dean. Fanciers and friends invited.—H. Dobson.

Wath and Dist. C.B.A.—Mar. 15, Cross Keys Hotel, 7.30. Fixing date for breeding lecture.—H. A. Watson.

QUESTIONS & ANSWERS

DOUBTS AND DIFFICULTIES SOLVED BY SPECIALISTS.

(1)—*All questions must be clearly written in ink (or typewritten) on one side only of paper, and must conclude with either the correct name of querist, or a pseudonym, or initials.*

(2)—*The proper name and address in full of querist must always be written on a separate sheet of paper and enclosed with the query. In no case must the address appear on the query.*

(3)—*Queries intended for different specialists must not be written on the same sheet of paper.*

(4)—Queries must not include or be included in *orders for books, instructions re advertisements, or any other matter for publication.*

(5)—*The department to which the queries refer must be stated in bold letters on the left hand corner of the query.*

(6)—*If an answer in the same week's issue is desired, queries must be posted to reach us by* Monday's first post at latest. *Queries will be dealt with in the order in which they are received, and only as space permits. The earlier queries are received the better attention they are likely to have.*

(7)—*Queries relating to illnesses of birds, except enquiries as to cause of death (for which see Post Mortems) will be answered by return of post on receipt of a postal order for sixpence and an addressed stamped envelope. Queries of an ordinary nature will be answered by post, if desired, on receipt of a postal order for one shilling and a stomped addressed envelope.*

(8)—*All who require letters of complaint written to advertisers must state grounds for doing so clearly and fully, and enclose a fee of sixpence to pay postage expenses, &c., otherwise their letters will not receive attention.*

(9)—*All queries must be addressed* the Editor, "Cage Birds," 154, *Fleet Street, London, E.C. Only queries so sent will be answered. Postcards are not admissible.*

Queries will be answered under the following conditions:—

NOTE.—Readers are requested to carefully study past numbers and current issue before submitting questions. By doing so they may save trouble and unnecessary repetition.

THE following gentlemen represent CAGE BIRDS staff of **ADVISORY EXPERTS.** Queries must in no case be addressed to any of them individually, but to the Editor.

Canaries.—**Claude St. John.** British Birds, Mules and Hybrids—**G. E. Weston.** Foreign Birds—**Wesley T. Page,** F.Z.S., M.B.N.H.S., &c., Park and Lake Aviculture—**Frank Finn,** B.A., F.Z.S. M.B.O.U., &c. Wild Bird Life—**H. Norman.**

NOTE.—If an auswer is required concerning the proper mating, etc. of Norwich, Yorkshires, Crests, Cinnamons, Greens, Borders, Lizards, Scotch or any other variety of the Canary family, we shall, should the querist desire us to do so, be pleased to submit his question for answer to some leading specialist of the day on the variety concerned.

CANARY QUERIES.

Answered by CLAUDE ST. JOHN.

Birds Dying, etc.

A Bird Lover.—You say you sent a bird for post mortem as advised, but you do not say what the report was. Anyway, if it was septic fever, as was evidently suspected, you have only to read up the novices' page during the last few weeks to see how to deal with it. Again, you say you give the proper Roller diet, but give no indication what it is. The condition of the birds is certainly not indicative of proper treatment. For diet, etc., see reply to "St. Andrew" in last week's issue, and if the birds do not improve with this treatment write again and tell us the report of post mortem examiner. 2. No hard and fast rule can be laid down as to the quantity of egg food to give each pair of birds whilst rearing young. Begin with a small teaspoonful, and increase or decrease it as required. You should aim at giving just as much as the birds clear up before feeding time comes round again. 3. Give the Roller cock with viscid droppings ten drops of syrup of buckthorn in the drinking water for two days, and afterwards give five drops every alternate day for the remainder of the week. At the end of the week give six drops of aromatic sulphuric acid in the water for one day.

Green Crest Ill.

J.B.S.—The place where the bird is kept, or some item of management, is probably the reason why the treatment you have been giving has done no good. The bird is almost certain to be exposed either to draughts, damp, or chills. The latter may result from cold baths. Take notice whether the bird is worse after bathing, and, if so, either withhold the bath until the weather is mild and bright, or give it in a tepid state. Feed on Canary seed as a staple, with a teaspoonful of egg food twice a week, and a small quantity of scalded rape every third day. Keep the bird comfortably warm, and begin treatment by giving ten drops of syrup of buckthorn in the water for one day. Afterwards give twenty drops whiskey, ten of glycerine, and five each of sweet spirits of nitre and tincture of tolu three consecutive days, and then every second day until better. Give a crumb of sponge-cake slightly moistened with sherry once a week, and a scrap of green food daily.

Sex, Heat and Seed.

J.L.—1. There is just a sporting chance of any Canary given away as a hen turning out a cock, but I would not build any hopes upon it simply because the bird tries to trill in a hoarse kind of way. Many hens do that, and even sometimes make quite a fair show of singing. 2. I should advise you to keep the bird indoors until towards the end of April, and then put it in the outdoor shed without any extra heat, rather than put it out earlier and use an oil-stove. 3. You ask for an opinion of a sample of Canary seed, yet the only sample enclosed is a mixture. The bulk of it is Canary of rather poor quality, and slightly musty; rape, not in sufficient bulk to examine properly; a fair proportion of linseed, and a little niger. I should not consider it suitable for a staple diet.

Of Nine Days' Standing.

D. E. F.—I trust your ill-luck since you entered the Canary Fancy nine days ago will not discourage you. I have not the least doubt your management of the birds is at fault. When they arrived you should have caged them off separately in a room where the heat was just nice and comfortable, and fairly regular day and night. The kitchen probably does not comply very well with these conditions. A teaspoonful of egg food and an unlimited supply of Canary seed should have been given, and then if either of them had shown signs of a cold half a teaspoonful of whiskey and five of sweet spirits of nitre in the water would have soon set matters right. As it is the birds are probably exposed to draughts or great variations of heat. Begin now, and feed them as we are frequently advising for a general diet; give a small piece of sponge cake slightly moistened with sherry once a week, to the birds that are ill, a teaspoonful of egg food once a week all round; and a pinch of hemp, and half a teaspoonful of rape seed each twice a week on different days. If the pair of Lizards still show no signs of beginning to nest, I would advise you to separate them, and keep both pairs separate until the cocks are quite well and in good song. See they are kept under the above described conditions, and give the cocks the whiskey and sweet nitre, as mentioned above, and ten drops of glycerine in the water for a week or so. You might keep the birds in the unused bedroom until towards the end of May, and then place them permanently in the unheated greenhouse, if you intend doing so. It is certainly a very unsuitable place for caged birds.

Seed and Insects.

South Devon.—To take your second query first, you can very easily tell when a bird is troubled with red mite without catching it, in any of the following ways:—Carefully examine the cage about the joints, corners, ends of perches, and any tiny hole or crack; if you find the surface sprinkled over with tiny white powdery-looking dots it is an infallible sign that mites are harbouring there. Probe such places with a pin, and you will be astonished at the live-stock disturbed. If you hear the bird moving restlessly on its perch a few hours after it has gone to roost, take a light to the cage and examine it carefully; you may see the mites running along the perches or popping in and out amongst the bird's feathers; or crush up a piece of white paper and stick it between two wires of the cage at the end of a perch, or near the turning pivot of the door. Leave it there a day or two, then remove carefully smooth it out, and see if there are any mites upon it. There will be some—more or less—if the cage is infested. The best way to discover grey lice, which live upon the bird permanently is to catch the bird and examine it under the wings, at the base of the neck and the root of the tail. The sample of Canary seed is small, and of very poor quality. It has probably been badly stored, and I should not care to use it myself.

Various.

V. H. G.—The best staple seed for every day use is just plain Canary seed. If the other seeds are given separately, this may be given in the seed boxes entirely unmixed. Say you give a pinch of rape every other day and a pinch of hemp twice a week, on intervening days, a scrap of egg food once a week, and green food daily. Once a week you might omit the dry rape seed and substitute a teaspoonful of scalded rape. When the birds have young, of course, more variety is required each day. Egg food, crushed hemp, scalded rape, should be accessible to them every day. Inga and niger are one and the same seed under two different names. It is only suitable for special and occasional use. Your birds kept in in a warm kitchen which sneeze and shake their heads are most certainly exposed to draught from some source or great variations of heat. Remedy this; and then give them twenty drops of whiskey, ten of glycerine, and six of sweet spirits of nitre in the water for a few days until symptoms disappear.

Preparing for Breeding.

"Mid." — There is just a possibility that the sudden loss of the whole of the tail feathers was due to an accident, in which case the loss will not very seriously delay breeding. You may give it fifteen drops of Chemical Food every second day for a week or so. If, however, the loss of the tail is the prelude to a general moult, you cannot do better than cover the bird over and keep it fairly warm, in order to get it through as quickly as possible. It will be late before you can think of mating it. If it is really moulting, you will not be long in doubt, as the rapid loss of the tail will almost certainly be quickly followed by an equally sudden loss of the smaller feathers. To counteract the overfeeding, give ten drops of syrup of buckthorn every third day for a fortnight. Your other queries should have been on separate sheet. See Mr. Weston's columns next week.

A Fickle Appetite.

J. H.—Both samples of Canary seed are small, and of rather poor quality. There is little, if anything, to choose between them. The Finch mixtures should have been sent separately for the British Bird expert. With double the quantity of hemp in it, No. 3 would make a fair mixture for Finches generally; No. 4 has too much Canary, and not enough hemp and rape. Give the bird that shells its seed without eating it as much Epsom Salts as will cover a sixpence and twenty drops of whiskey two days in every three for a week, and afterwards give ten drops of aromatic sulphuric acid every second day for another week. If not better by that time, write again and say if the bird is in a fat or lean condition.

Norwich Hen Lifeless.

H. H.—In addition to the staple diet of Canary seed, give the hen half a teaspoonful of egg food, which you can make by mixing the food you mention with the required quantity of hard-boiled egg, twice a week, a few grains of hemp seed one day, and a pinch of rape the next, and a spray of watercress, or small leaf of dandelion daily. In the drinking water give for one day twelve drops of syrup of buckthorn, and the next day twenty drops of whiskey and ten of glycerine. After that give fifteen drops of Chemical Food and six of aromatic sulphuric acid on alternate days for a week longer. Of course, these last two items are not to be given both together on the same day, but one each day; first one, then the other.

Early Breeding.

T. B. Voss.—You paired up the birds more than two months too early, and although you say you kept the temperature at from 55 to 70 degrees, this is far more variable than can be allowed with safety. From 65 to 70 would have been nearer the mark, and at this you might probably have saved the birds. But as it is, you simply lost the birds through cold. The symptoms indicate this clearly; so I should rather expect the heat sometimes went even lower than you say, although 55 is quite low enough to do mischief at this time of the year. I do not know any special book on rearing young, but all general books probably treat the subject largely. Perhaps "Canary Breeding for Beginners," from this office, would suit you if you have not got it. You do not say what soft food you use, so I can only advise you to use that which you often see advised in this column.

Egg Food Again.

W. Shone, Jun.—There is absolutely no way of making up fresh egg food which will keep good for a week, and yet be wholesome and harmless to the birds. Probably what you mean is a good substitute for egg food, which may be mixed in sufficient quantities in a dry state to last that length of time. The best of this kind that I know is, get a pound of maizena wafer biscuits, crush them to powder, then add half a pound of preserved egg yolk, as sold for feeding soft-billed birds, and mix thoroughly together. Store this mixture in air-tight tins or jars, and slightly moisten the quantity required for use each day. This will keep good in the dry state for a few weeks, and answers all the purposes of fresh egg food very well.

Crests Moulting.

Anxious.—Your situation is almost certainly damp or draughty, otherwise the oil-stove is responsible for greater variations than you imagine. If the cages have not been properly cleaned and distempered, as described in the "Notebook" a few weeks ago, do them at once, before it gets any later, otherwise you will be over-run with mites later on. See that the temperature is fairly equable; if you cannot command an equable one with the stove, do not use any heat at all. Give the Canary, rape, and a few grains of hemp as you are now doing. Cut off the linseed and other mixed seed, and give a teaspoonful of egg food once a week, and twice a week a small piece of sponge cake with a few drops of sherry on it. A spray of green may be given daily. In the drinking water give twenty drops of chemical food every second day until the moulting has ceased.

A Fresh Starter.

E.G.—1. As you require good singers, and have no other birds, I would advise you to get a pair of pure Rollers. If these are not quite up to your ideal as regards looks, then get a Roller cock and a ticked yellow Norwich or Yorkshire hen. 2. Provided you do not mate up too early—say, not before the early days in April—I should say the empty bedroom would be preferable to the living room, as the temperature would be more equable. 3. If you go in for the Roller-Norwich cross any general book on Canaries would suit you; for pure Rollers, "The German Canary," by A. Rettich, obtainable from this office, would be about the best.

Brevities.

Bird Rough in Feather (T.G.).—You do not say how the bird is fed. Still it does not much matter, as I feel convinced that the bird's condition is due to red mite. Thoroughly clean its cage inside and out, and also the position where it hangs. Scrub it out with a fairly strong solution of carbolic disinfectant and afterwards re-distemper and varnish. Give the bird a little Epsom salts and a few drops of lemon juice in its water for a day or two, and spray it a little daily with tepid water in which a few quassia chips have been soaking. Should you really decide to destroy it, don't poison it by any means—that seems too horribly bad. Ask your chemist to chloroform it.

Transferring Birds (Lottie).—You should defer transferring the birds from your cosy parlour to a cold room until the end of this month. Then the average temperature will be a little more stationary, and the transference not so likely to upset the birds, and they may then be put direct into their breeding quarters ready for mating. But do not actually put them together until they have been in the room a few days, and you notice the cocks busy feeding the hens. You give too much of the seed mixture. Half a teaspoonful twice a week is quite enough. Of course, you will select an interval of nice mild weather to move the birds in.

Norwich Hen Unwell (Essendon).—Continue to give plain Canary seed only as a staple diet, and twice a week give a very little bread soaked in milk, and pressed nearly dry, a pinch each of hemp and rape just once a week on different days, and a spray of watercress daily. Give nothing else in the way of food. Give as much Epsom salts as will cover a threepenny piece, the same quantity of chlorate of potash, and twenty drops of whiskey in the drinking water two days in every three for a fortnight. Catch the bird twice a week, and gently drop a tiny drop of warm olive oil on the vent from the end of knitting needle. Shall be glad to hear result at the end of that time.

Lays one Egg (A. H. Bone).—You will get nothing but disappointment out of this hen, I fear. The very best advice I can give you is to discard her altogether, and procure a healthy young hen of last year's breeding to supply her place.

Canary Going Blind (J.S.).—There cannot be anything the matter with the bird's health according to your description, and the fact that the one eye has sunk in its socket and become blind seems to point to some physical injury to the eyeball, such as a vicious peck from another bird, or, perhaps, some jagged end of wire pricking it. Did the shrinkage take place in a short time, and is it kept in a cage with other birds? I strongly suspect one or other of these causes is responsible for the blindness. You can do nothing beyond shading the cage a little until the solitary eye has grown accustomed to doing the work of two.

Norwich Cock Gaping (Anxious Novice).—The bird is probably exposed to draught from somewhere. See that it is quite protected from these, and chills. Do not give cold baths until the weather is milder. In the drinking water give twenty drops of whiskey, and ten each of syrup of squills and glycerine, every second day for a fortnight, and at the end of each week give twenty drops of chemical food for one day.

Not Singing (W. J. Jess, Jun.).—It is quite a common thing for the cock to stop singing when mated, even though he may have been in full song right up to time of mating. It does not necessarily mean that he is gone out of breeding condition. If he is in full song and vigorous at the time of mating, that is all you need wish for. The birds are probably going on all right, although you have been a little too hasty in putting them together.

Bowel Trouble (Novice).—Discontinue giving chemical food, and for one day give as much Epsom Salts as will cover a sixpence and twelve drops of whisky in the water, and afterwards give six drops of aromatic sulphuric acid in the water every second day until the symptoms cease. Give also a teaspoonful of egg food once a week, and a few grains of hemp daily until better.

Diarrhoea, etc. (Cinnamon).—Treat the hen as advised to "Novice" in this issue for bowel trouble, and give twice in the first week, in addition to what is there advised, a small piece of sponge cake slightly moistened with sherry. As regards the Crest cock, see if it is troubled with insects—the grey lice, not mites. Catch it, and hold it in your hand a few minutes—you will soon know then. If this is not the trouble, dissolve a piece of sulphate of soda the size of a small pea in its water for two days, and afterwards give twenty drops of chemical food every second day for a week or so.

Aviary (Redrob).—Thanks; glad to hear you appreciated aviary notes. Look for a little extension. Sorry I have forgotten what space it was you wished to enclose with netting. If you will remind me I shall be glad to deal with it. The aviary should answer admirably for moulting young Borders, providing they have not been bred in heat.

Canaries hissing J. Chapman).—Give the birds the medicine advised to 'Anxious Novice" in this issue, for Norwich cock gaping, and once a week give in addition just a crumb of sponge cake slightly moistened with sherry. See they are not exposed to any draughts.

Another Gaper (Saint Anne).—You should have said how the bird was fed. I am a little inclined to think it is simply overfed. Try the following for a week, and if not better then write again and say how it is fed and treated. In the drinking water give as much Epsom salts as will cover a sixpence, ten drops of glycerine, and twenty of whiskey, every alternate day, and a spray of green food daily. I surmise you are satisfied that no draught can get at the bird.

Gone off Song (Don't Know).—I do not think there is anything wrong with your bird. Many cocks cease singing and act as you say this one does when they are mated up. You have certainly taken a risk in pairing them so early, but now it is done, and the hen gone to nest, you can do nothing but let nature take its course. Drop the linseed out of the diet; give only a small quantity of egg food twice a week until the young are hatched, and stop giving saffron. You should not be giving healthy birds drugs every few days.

In Fine Condition (E.W.H.).—Glad to hear the three young birds are now in fine condition. Certainly you may breed from them this year. But as they were hatched very late, I should advise you not to mate them early. Unless they should come too forward do not mate them before the end of April. May would be better; and do not take more than two nests from them this year upon any account. Mate them with two-year old birds.

BRITISH BIRDS, MULES AND HYBRIDS.

Answered by G. E. WESTON.

A Greenfinch Mating Matter.

Young Mule Fancier.—If your four-month caged Greenfinch is a "kind," steady bird, then he may quite likely breed you some Mules this season. If the birds were mine, I should keep the Greenie one side the wired division of a two-compartment breeding cage, the hen Canary the other side, and withdraw the slide when I saw the former feeding the hen through the wires, and otherwise taking notice of her. Then you would be pretty certain to get no "quarrelling" worth mentioning, especially if you left the actual pairing up (that is, running the two together) until the hen commenced carrying bits of nesting material about in her beak. There is no object whatever in putting the birds together (in the same compartment) until the hen is quite ready, providing, of course, the two birds it is desired shall breed are kept side by side, so that they may get to know each other. If a single breeding cage is used, then it is sufficient to hang the cock bird on the front of it in a nursery cage (or other suitable type) for an hour or so daily. The worst thing anyone can do is to run a cock British Finch (of any kind) which is in rank breeding condition in with a hen Canary which is not ready to go to nest. The cock tries to force his attentions on the hen, and she not being in the mood to accept them, a pitched battle is the result. And loss of feathers is not the only outcome of the latter, for such ill-considered attempts at "mating" often set the two birds at loggerheads, and in consequence they do no good the season through. The proper pairing up of one's couples is the keynote of success.

A Mixed Bag.

Jigger.—1: Just because your two Redpolls "feed" each other it will be rash to assume they are a pair. Two cock birds of most species will carry on in this way; and so will two hens. Catch the birds and examine their breasts, and if you find any red feathers thereon, then both are cocks. Do they both sing? Don't overlook the fact that you may quite likely have two hens. 2: Two or three times within recent weeks I have told how to sex Greenfinches. Briefly, the cock is a rich green; the hen ashy-brown with green shadings. The cock Twite has a distinct red patch on the rump (just under the tips of the wings), whereas the hen is always a dingy grey thereabouts. 3: If you want to breed a few nice coloured dark Mules, you cannot beat a yellow green-marked Norwich-type hen Canary (one stoutly built, that is) as a mate for the Goldfinch. If you want a sporting chance of a light Mule, you might do worse than try a clear or ticked pink-eyed yellow hen of Yorkshire type, one somewhat strong in build for choice. 4: Pair your birds when they are ready; see reply to "Jigger" this week. Let the prospective husbands and wives become acquainted by sight, at the least, before the day comes when the reading of the marriage service, so to speak, actually takes place.

All Trouble.

Cavendish.—I certainly think the skin and eye complaints from which the two Linnets are suffering are infectious—probably one and the same cause is at the root of the trouble of each bird. It would be communicable from the perches, for one thing, and I advise you to remove the Linnets into separate cages, and to regularly cleanse the perches therein with hot water, to each half a pint of which a small teaspoonful of boric acid has been added. Dissolve the acid in a little of the hot water, then fill up to the full quantity of the latter. It would be as well to wash the cage thoroughly with a similar solution, and then, if of wood, paint the insides over with sanitary washable distemper. The eye of Linnet No. 2 should be bathed twice daily (morning and evening) with warm boric acid solution, but only of a strength of one small teaspoonful (not heaped up) to a full pint of water. Use a pledget of lint, or piece of very soft rag, to dab the eye with, and don't soak the surrounding plumage. For Linnet No. 1 get a pot of a mild sulphur ointment from the chemist, and smear lightly twice daily the place on the head. The Goldfinch you mention I have little hope for; his condition sounds hopeless, in fact. Don't continue purgatives, but rather put half a teaspoonful of Parrish's Chemical Food in the drinking water. Let him have all the niger seed he chooses to eat, and crack his hemp if necessary; also don't forget maw. You should go out and get him a daily supply of young, tender dandelion leaves, and all the flowering heads of groundsel you can find, likewise a little seeding chickweed. In suitable sheltered spots these invaluable wild plants may be now obtained; have been obtainable for some time, in fact, down in the south. Try him also with a few ants eggs that have been steeped in new milk, then drained.

A Mixture.

J. L.—Oil lamps are always more or less dangerous things, however carefully they may be tended. You need not run any risk on behalf of the Linnet and Canary, though, for they will need no artificial heat at all. The outdoor place wants to be damp and draught-proof, however. The sample of "Linnet Mixture" is good enough, so far as the quality is concerned, but is unsuitable for regular use, on account of the niger and hemp it contains (millet is also useless, be it noted). See another reply this week on the feeding of Linnet-Canary couples. You say your Linnet has a "speckled breast, clearly marked all over"; this is not a sign of a cock bird, as you suppose, but quite the contrary, the hen Linnets being practically always more heavily pencilled than the cocks. Seeing that your bird has not sung at all it looks very much as though you had a hen. If it does not soon sing on the feeding I advise, you can be certain it is a hen.

Flying Loose; Bullie Ailing.

C. W. T.—Get a small supply of a good sulphur ointment from a chemist, and dress the hen Bullie's legs and head with it lightly twice daily, morning and evening. Give three or four mild doses of sulphate of soda (as much as will lie on a sixpence dissolved in two table-spoonfuls of drinking water) with daily intervals of plain water in between. In many cases ordinary sea-sand is neither sufficiently gritty nor shelly (has not large enough particles in it), and this requires to be remedied by mixing with it a proportion of some good brand of prepared bird grit. The Finches certainly want putting with their proper partners, and at once, or they will be mating where they please. Run each male bird alongside the particular hen destined for him, in the manner described this week in another reply dealing with mating.

Thrush Ailing.

Bonaparte.—Porridge is good for human beings; likewise bread and milk. But as the staple foods of a Song Thrush they do not strike me as suitable and adequate. You had far better try one of the advertised Thrush foods (getting a good one) or adopt the following dietary. This stock mixture any good seller of bird foods will mix for you (store it in tins): Game (or Pheasant) meal, six parts; ground silkworm pupae, meat meal, good ants' eggs and dried flies, one part each, by measure. Get the game meal without grit. If you have any difficulty in doing so, finely crushed puppy cakes make an excellent substitute; or the "broken" biscuit obtainable from the grocer. If the latter be used, add an extra part of meat meal. Damp quantity required for daily use with a little water, or grated raw carrot, or cold boiled potato, or finely chopped lettuce, chickweed, watercress, or other green food in season. Vary them frequently and add a teaspoonful of preserved egg flake, or half a hardboiled egg, twice or so a week. Give three or four mealworms daily, and any other insects you can lay hands on, also ripe fruit and berries frequently, and according to season. Black-beetles and snails (especially snails dropped into boiling water for a few minutes, then chopped up), are much relished. Get an ounce of citrate of iron crystals from a chemist, and dissolve a piece as large as a pea in its drinking water daily for a fortnight, but discontinuing it for a time if it seems to be binding the bird's bowels. The excreta of large Softbills is always somewhat offensive; their cages need frequent cleaning out.

Brevities.

Identity of Bird (H. C. Ainge).—The bird you saw must have been a Heron; no other species answers the description you give.

Stock Mixtures (F. O. Le Marchand).—The Goldfinch stock mixture is very good, but only a quarter-part of mixed summer rape and charlock should be put in, as Goldies very seldom, if at all, touch either. The Linnet and Redpoll mixture is correct; reduce the linseed somewhat during the hot weather.

Sex of Redpolls (Bert).—No doubt you would notice I dealt with this question in reply to "Bob," in our issue of February 29th. Don't mix Canary with British bird queries; it always delays the answering.

Outdoor Place (W. D.).—The shed of which you send a sketch, should answer admirably as a bird-house. If you desire good breeding results, keep the birds in cages; and don't shift them outside until we get a spell of mild weather. Corrugated iron makes a very "hot" roofing during the height of summer (and your place faces south). Whitewash it on top, and line it, if possible, with match-boarding. Have windows and door to open, for fresh air purposes.

Is this a Blackcap (No nom-de-plume).—If by "Blackcap" you refer to the Blackcap Warbler, then the bird you have is not of that species. It is a Great Tit, in fact, often termed the Ox-eye Tit. "Blackcap" is just a local name for it, and the bird has many of these. The Great Tit is a soft-billed bird, as you say, but likes a few sunflower and hemp seeds, and a cracked nut or two, now and again. Don't forget live food (mealworms, etc.).

Food for Goldfinch Mule (E. W. S.).—A splendid stock mixture for a Goldfinch mule is: Canary and Teazle, three parts each; hemp, one part; linseed, charlock, and summer rape, half-a-part each. Give the "tit-bits" recommended for a Goldfinch.

Goldfinches: and Another (Cantab).—The only bird I can call to mind answering the description you give, is the Reed Bunting. The exterior tail feathers are marked with white. The "small Siberian" you refer to, is probably a Russian Goldfinch. From the description you give, I feel sure it is a cock bird, right enough. In the hen the black band over the head, and the wing butts are practically never a glossy jet-black; many cocks have feathers of the latter slightly edged with brown, and many have but a small blaze.

Siberian Goldfinch (Anxious).—The Siberian Goldfinch is exactly the same in markings as the English Goldfinch, and almost exactly the same in colouration, the only difference being that it is lighter (generally pure white) on the cheeks, throat (or collar) breast and abdomen. The British Finch is, in short, a browner looking bird. The size of Siberians varies considerably, but good specimens look twice the size of a good English bird (three times the size of many).

Concerning a Linnet (P. A. S. Salford).—1: The Linnet may fertilise eggs all right, even though of a nervous disposition. Hang the cage in a quiet corner, and go to it as little as possible, and then as quietly as possible. 2: See another answer this week. 3: He will bathe later on, no doubt, especially if the hen Canary indulges. You should get a spray, and use it on him lightly twice a week.

A Trio (Bullie).—1: I think you are mistaken in "not thinking much" of the two samples of teazle. Both seem to me excellent, especially the darker coloured one, which is grandly ripened. All teazle is very "dusty" seed by nature; you can sieve it for hours, and then shake "dust" from it. 2: If the box cage is of the usual "Finch stock cage" type, then a height of 10 to 12 inches is ample. 3: A harmless, hard paint is right enough for cages, but enamel is worth the extra cost and trouble. Distemper is a fine thing for cage interiors, and quite cheap.

Identity of Bird (Puzzled).—I lost your letter, unfortunately, but have just found it again, and have written to the address given.

In a Room (Nib).—If you can turn up back numbers, you will find many answers of mine dealing with the breeding of Britishers, when flying loose in a room. If you confine the hens to Canaries and Bullfinches, you might get a hybrid or two from the latter, and are practically certain of a few from the former. See the "Novices' Notebook," as regards the fitting of the room. Put up plenty of nest boxes; set old nests of Blackbirds and Thrushes about: dead gorse, etc., bushes, fir, etc., branches; also suitable sites contrived from bundles of pea-sticks; get the ANNUAL; there are many grand hints in it; also full advice for the treatment of egg-bound hens.

In another Room (Sambo).—See reply to "Nib" this week. With a mixed lot of birds flying loose in a room, the chances of successful breeding results are of a speculative character, to say the least of it. They will interfere one with the other, and delight in upsetting their neighbour's domestic arrangements. You would want to either take out four of the cock Canaries, or add a few more hens (you don't give size of room). Remove the cock Bullie at once, if he maltreats any of the Bullie hens.

Which Room (Glasgow).—I know many fanciers who have been very successful at breeding birds in bath-rooms; they are quiet spots, as a rule, but often are so small as to be useless for the purpose. If suitable, however, you will be wise to use your bathroom in preference to the kitchen. Yes; the British birds should be introduced to their partners now. See another reply this week.

Lark with Cold (Potter).—There are one or two very good remedies for colds advertised in our columns (also tonics), and I recommend you to give one of them a fair trial. Keep the bird out of draughts, and in an equable temperature.

Class for Foreign Hybrids (Ruby).—My answer to you on this subject got put under the Foreign Queries by our printer last week in error. Probably you would notice it, however.

Breeding from a Mule (A. Yeldray).—If your bird is really a Mule—bred between a Goldfinch and a Canary— then you cannot breed any young from him. In short, Mules will not breed. I will, with your permission, postpone naming the young until you produce them. For a single bird, the easiest way to feed would be to use one of the Finch mixtures put up by a good maker, and sold at most seed and bird shops.

The Case of a Linnet (Saint Anne).—Try the effect of stirring ten drops of tincture of gentian into two tablespoonfuls of drinking water daily. Continue with the maw seed. If no improvement in a fortnight, write me again.

Then Incontinently Died (Linney).—It is quite possible your Linnet "sulked and died," as you put it, because you separated him from the hen Canary to whom he had become attached. I once lost the finest Cinnamon Greenfinch I have ever seen, from the very same cause. Many Linnets are very tender-hearted, so far as separation during the breeding season is concerned. Putting a bird into a newly-painted cage which smells will also most certainly serve to set it on that journey from which no bird returns. One of our best-known Norwich Plainhead breeders recently told me he lost many birds through keeping them in a room covered with newly-laid, very strong smelling, linoleum.

A "Mystery" (Anxious).—I have three Wagtails now, and have had scores in my time, but never a one which went about with a "drop of water always at end of beak." True, they are always dabbling with the water. I must give the "mystery" up, if mystery there be. Anyway, as you say the bird is very lively and well, you clearly have nothing to be anxious about.

Bullfinch's Eye (E. Winstone).—Bathe the eye with boric acid solution, as advised "Cavendish" this week in the case of his Linnet.

Procedure with Linnet (Mule, H. T.).—I do not think you ought to separate the Linnet and hen Canary now. As the former is house-moulted, the eggs of the first nest may quite likely be fertile. It is not difficult to get moulted Linnets into full breeding condition early—very early—in the season. Goldies are the trouble in this respect. If your Linnet is singing stoutly, and has a blue beak, don't worry. See also reply to "Linney" this week.

Show Questions (Pupil).—1: A buff dark Mule would always be beaten by a yellow equal in size and other qualities. A first-class buff can generally give points to the yellows so far as mere size is concerned. 2: A hen Redpoll-Bullfinch Hybrid would not stand much chance in present-day competition. The cock resembles the hen until its first moult, and does not get its full colour until the second moult. Most Hybrids, in fact, improve in colour for three or four years.

FOREIGN BIRDS.

Answered by WESLEY T. PAGE, F.Z.S., M.B.N.H.S.

Grey Parrot Unwell.

C. W. H. G.—Continue the glyco-thymoline and chemical food, also give the bird a mild aperient every other day, say four doses in all (one teaspoonful of Dinneford's Magnesia, soaked into a piece of biscuit or something similar which the bird will eat). In all other respects treat as in previous reply. Carefully examine the bird's mouth, and if there are any small ulcerations on either tongue or throat, wipe out its mouth (use a camel hair brush) with a mixture of chlorate of potassium and glycerine, ten grains of the former and one drachm of the latter. Providing the skin is sound, if there is any swelling or lump on the throat, lightly touch the centre of same with tincture of iodine. In both instances the brush should be well cleansed after, and only a small portion of the mixture used on each occasion—it must not be used a second time.

Another Parrot Unwell.

E. W.—At such times when your bird appears weakest, give it a few sips of slightly chilled water containing a few drops of brandy. By all means offer the bird fruit, banana, grapes, or a bit of ripe apple. Get from your chemist 20 grains of chlorate of potassium and two drachms of glycerine; well mix, and wipe out the bird's mouth with the solution, using a small portion only each time, and well cleansing the brush (small camel hair) after each occasion. If the bird does not feed, why not push a little food into its mouth two or three times a day? Mash up a little boiled maize and try this. At the same time under the conditions you could safely immerse a piece of biscuit in water (not sufficiently to saturate it); this would supply a little more moisture to the food. If it survive the present attack it will ultimately take to the seed mixture. I should give it one teaspoonful of Dinneford's Magnesia soaked into a piece of biscuit, and it would be as well to repeat the dose after an interval of three days if its bowels are not loose. If the bird can only stand the strain of a few more days it will probably recover. You can safely let it have as much biscuit as it cares for. Hope it will soon take a turn for the better.

Amazon with Sore Wings.

S. H. P.—I should advise you to again open the swellings and by gentle pressure and fomentation with warm water extract all fluid, and then anoint with either zinc or spermaceti ointment. Of course, if they come up again you must repeat the treatment till they are exhausted; there is no other way. The only other alternative is to let a vet, see them; possibly he could cleanse them better than you are able to. You must attend to its diet, which should consist of seed mixture, ripe fruit, plain biscuit, nuts, and a little greenfood occasionally. Also a little boiled maize twice a week; this only keeps fresh one day, and the food vessel must be kept strictly clean. Do not give any tea, coffee, or milk slops or any kind of animal food whatever. Keep the bird's bowels moving freely, not loose, by putting one teaspoonful of Dinneford's Magnesia in its drinking water as necessary. If there is no improvement in a fortnight I should certainly advise you to let a vet. have a look at it.

Treatment of Cordon Bleus.

M. L.—1 and 2: There is a surfeit owing to improper feeding, which is responsible for baldness, but in this case I am of opinion that the birds are simply plucking one another, and I should cage them up separately. 3: Give them an aperient; make their drinking water just saline with Epsom Salts for one day, and repeat the dose in three days' time. I am also of opinion that it is pneumonia that took off the Zebra Waxbills. For many months this has been ravaging, especially among birds indoors. Keep the birds out of draught, yet where the air is fresh. Ants' eggs and an occasional mealworm will be good for those which will eat them; every other day give a leaf of tender, fresh lettuce; also crush some cuttlefish to the size of millet and mingle it with their sand. As regards seed, give them a mixture of one part each Canary, white millet, and French millet; also supply them with millet sprays. When not giving the aperient, lightly colour the water (say to colour of pale port) with Parrish's Chemical Food. Note: The birds must be caged separately till their feathers have grown again. Many of these Ornamental Finches act as if they had a special mission to keep one another bald once they become so. Have twiggy branches in your cage for perches, and as soon as you can get it free from frost give them a liberal supply of grass in the ear (grass flowers).

Amazon Moulting.

H.L.—Put it on a course of Parrish's Chemical Food using it in the proportion of one teaspoonful of the chemical food to two tablespoonsful of the drinking water. Continue this till the bird is in condition again. Give one dose (one teaspoonful) of Dinneford's Magnesia, on a piece of spongecake, plain biscuit, or crust of bread, whichever the bird will most readily eat. Repeat this after an interval of three days. Diet: A seed mixture of Canary and oats, two parts each and one part each of wheat, dari, hemp, maize, and sunflower seed; well mix, and keep a continuous supply in the cage. Supply also boiled maize twice a week. Note: This only keeps fresh one day, and food vessel must be kept clean. Vary its diet with ripe fruit, plain biscuit, nuts, and greenfood. Keep a piece of clean cuttlefish in its cage. Do not give tea, coffee, or milk slops, nor yet any kind of animal food. It should soon recover condition. Keep it out of draught, otherwise it is a hardy species.

Seed Samples.

"Greniston."—The samples of seed you send are of average quality, and the prices only a few pence per peck more than London prices. There is a small golden brown millet which is about 9d. per peck dearer than white millet; it is almost a counterpart to the seeds in millet sprays, and is sold both as French and Indian millet. It is very wholesome, and apparently much liked by Budgerigars, Lovebirds, and the smaller Parrakeets generally. The rice you send is known both as rice in the husk and paddy rice, and is the kind you refer to. For the nesting Quakers put in some crushed oats, and also some pieces of plain biscuit; let them have access to greenfood (fresh, tender lettuce), and such ripe fruit as they favour. It would be of general interest if you would write a letter describing the nest, etc., of the Quaker Parrakeets.

Books on Foreign Birds.

J. L. Simpson.—There are very few books with coloured plates, save such as are very costly. This must of necessity be so, but when my book on Foreign birds is published (which it will be at no distant time now), with the aid of the coloured plates in the work you now possess, it should suffice. Again, there is no one book dealing with them; they are in sections, and cost pounds each monthly. It is not wise to mix Foreign and British to any great extent, but Goldfinches, Bullfinches, Redpolls and Siskins are reasonably safe with the Australian Grassfinches, and Mannikins, Waxbills, Weavers, and Ornamental Finches in variety. If you wish for any prospect of breeding allow 2 feet of frontage to each pair of birds, as it is far better to have a smaller number in fine condition, than to have a crowded aviary, with many of its occupants in indifferent condition. Neither is it advisable to mix up Parrakeets with Finches, etc., or losses are sure to occur sooner or later. If you indicate in what direction your desires lie, I shall be pleased to name suitable species.

Barnard Parrakeet in Moult.

T. R. Hadley.—Continue to keep up the cuttlefish and the Parrish's chemical food; you cannot do better. Supply a leaf of tender lettuce daily, and if it will eat sponge cake or plain biscuit, slightly damp a piece and then dip it in flour of sulphur. If it will eat this it will be helpful, give it daily. For one day only put one teaspoonful of Dinneford's magnesia in its drinking water. This should not need repeating unless the chemical food causes constipation. Canary, millet, oats and a little hemp should form its staple diet, with a little of such ripe fruit as it will eat. It should soon recover. I expect during the change of ownership it has passed through a sudden change of temperature bringing about the result you describe.

A Swelling in Throat.

F. S. T.—So long as there is no sign of matter, the only thing for you to do is to continue to paint, say twice a week, with tincture of iodine. Of course, if the swelling becomes full of fluid, then it must be lanced, when it should soon heal. Fomenting the swelling with a solution of camomile flowers, would but entail more trouble than painting with iodine. You must keep the bird in a good state of health; see that its bowels move freely. This is important. At the same time the excreta should not be watery loose. A teaspoonful of Dinneford's Magnesia in two tablespoonsful of drinking water, letting the bird have no other drinkable during the day, should suffice to keep them moving; there should, except in extreme cases, be a two-days' interval between the doses. The former diet was very unwholesome, but you are now feeding correctly. Do not let anyone persuade you to give tea, coffee, or milk sops, or any kind of animal food. It is a hardy species, and the only care it needs is to keep it out of draught. Whatever the trouble is, if you persevere with the iodine two or three times a week for a month I shall be very much surprised if there is not a material decrease in the swelling.

Brevities.

Bare Parts (G.R.E.).—Bathe or spray the bare parts with quassia solution, keeping it carefully out of draught till dry. Give it a dose or two of Dinneford's magnesia (see other replies for directions). The bird should be fed on a mixture of Canary, oats, wheat, dari, hemp and sunflower seed; with ripe fruit, plain biscuits, and nuts as extras. See other replies as to giving it chemical food.

What Bird? ("Cavendish").—It is either an immature male or a female Ring-necked Parrakeet. There are several local races and species; it is hardly possible to definitely say which from a very minute description. Diet: A seed mixture of Canary, oats, wheat, dari, hemp, small maize and sunflower; of the three latter only use half the quantity of each, as of the former kinds. Also supply ripe fruit, plain biscuit, greenfood, cuttlefish, nuts, and water for drinking and bathing.

Complications (E.H.S.).—There should arise no unpleasant complications from introducing the other male into your C.P. cage, but you must not at any future time introduce a hen, without removing one of the males.

Various (Jigger).—(1). The cere is blue in the male and dark brown in the female, when they are in breeding condition; (2). The substance surrounding the nostrils at the base of the upper mandible; (3). They lack the brilliance of the adults, but are very similar as to colours and markings; (4). Very variable, but should be ready by or early in April; (5). It is very risky to keep Budgerigars with Finches; (6). Varies from 12 to 14 days; (7). There are 3 or 4 broods per year of 3, 4, 5, or even 7 each.

A Useful Box (W.H.K.).—A Hartz travelling cage, a box 4 or 5 inches square, or even a Canary nest pan. A useful box appeared under "Illustrated Ideas" in our last issue. Whichever you use, it should be screened with heather sprays, etc. Re the soft food, if they will eat it dry and it does not get fouled, it need not be given fresh daily; but if it has to be damped, then it must be prepared fresh daily. Hope you'll have luck with them.

Parrot with Indigestion (E.W.).—Continue to treat as already advised, and do not give slops or any kind of animal food, nor yet pastries; otherwise your diet will meet the case. Till the trouble yields give one teaspoonful of Dinneford's magnesia (in its drinking water, or soak it into a piece of plain biscuit or something similar) say twice a week, so long as its bowels do not become watery loose. If there should be any signs of weakness, keep its drinking water well coloured with Parrish's chemical food. It could also have a few nuts as a change two or three times a week—shelled walnuts are as good as any. Note other replies.

GENERAL.

Answered by THE EDITOR.

Goldfish (H. Morrison).—We have sent your query to our Mr. Finn, who will answer same in due course. You will find full information on the keeping of Goldfish in that gentleman's recently-published work "The Pet Book," which we can send you post free for 5s. 3d. It is a mine of information on every possible kind of living thing likely to be kept as a pet.

Alleged Error of Sex (F. C. Walmsley).—We cannot see on what ground we could possible intervene; as we were not in any way concerned in the transaction. Five months is a long time ago, and if the seller says the bird is not the one he then sold you, who can decide to the contrary?

Cutting (J. Crabhe).—Thanks very much for the interesting cutting you send.

Nesting Moss (F. Myers).—We could only insert such a "Twittering" as the one you send us as a paid advertisement.

Advertisement (J. W. Norris).—As no names were specifically mentioned in this instance, we could not possibly publish your letter. Sorry.

Report of Dinner (G. W. Grant).—It is in type, and only extraordinary pressure on space has prevented it (with many others) appearing in print.

Y.C.C. of Ireland (C. H. Smith).—We find that the omission of the chairman's name from the ANNUAL was purely an unfortunate error of our printer, and escaped the proof reader. We greatly regret the omission.

No Prize Money (Exhibitor).—We should make no charge for a letter inserted in our correspondence column.

Not on Approval (G. McLeod).—We are obliged to you for calling our attention to this matter.

A Beginner's Card (H. Elliott).—We thank you for the suggestion, which shall have consideration.

A Mealy Hen (T. McCarthy).—A Mealy hen is now-a-days usually termed a buff hen, and among our advertisement columns you will find many good fanciers and dealers who will supply you with one (you do not say what type of bird you require). It is against our rules to recommend any individual advertiser.

Cutting (J. G. Hutchinson).—Accept our thanks for your kindness. Other matters in letter duly noted.

Linnets and Larks (G. Rostron).—We will endeavour in future to remember the point you mention, but you should always state clearly in the body of the report which society it refers to.

POST MORTEMS.

Mr. J. North, 435, Oxford Road, Reading, will examine cage birds for a fee of 1s. 6d. each bird; for a reply direct, 2s. 6d.; analysis, 21s. Subjects for post-mortem examination must be sent packed in a box direct to J. North, with fee. Any sent to the office of this paper will be thrown away, and if a fee is enclosed the loss will be the sender's.

Lizard (Miss A. E. Price).—The immediate cause of death was apoplexy, resulting from softening and hemorrhage of the liver. It is suggested that salad, sweet apple, or boiled carrot be given, and that hemp seed should be withheld. Plenty of flying space and frequent bathing is also advisable.

CORRESPONDENCE.

A SUGGESTION re PRIZE CARDS.

SIR,—Having noticed at the several cage bird shows that I have visited lately a fault which might be remedied, I venture to make a suggestion. I think, for my own part, that a small printed card would be quite sufficient in the way of prize and special cards. When a bird takes a first prize and three or four specials with it, the cage front is covered up and the bird is hardly to he seen. So I suggest that a small card with an eyclet, the same as is on small labels with class and number, should he fastened at the bottom of the wire cage, and then every onlooker would have a better chance of seeing the birds. It would only mean a little more work for the one putting the cards on, and it would be a very easy matter for fanciers to count how many cards there are on each cage. W. P. JONES.

ROLLER CANARIES AT THE PALACE SHOW.

SIR,—As Mr. Whittaker has not replied to my last letter I sent him as regards the matches, I have returned all the money that has been sent me. I should like, however, to point out to Mr. Whittaker that there are two sides to every question, and the member who accepted his challenge naturally wanted a voice in the matter. But Mr. Whittaker wanted it all his own way; the final offer to him was, that the birds be sent to the B.R.C.C. meeting March 10th, Mr. Whittaker to choose his own judge, and the loser to pay the money to the funds of the club. This I consider a very fair offer, and am surprised that Mr. Whittaker has not replied to it. Now, as regards his first letter to the Press, if he intended to insiuuate that the judge had acted dishonestly there are no grounds for that statement, and Mr. Whittaker owes Mr. Rettich an apology. Whether the judge did make a mistake as regards that particular bird is still an open question, and when we consider the conditions the judge had to contend with, one cannot blame the judge if he did make a mistake. But to infer that he acted dishonestly is decidedly wrong, and I hope that Mr. Whittaker will tender the apology that is due.

J. W. NORRIS, Hon. Sec. B.R.C.C.

THE PROVINCIAL ROLLER CANARY CLUB.

SIR,—A large number of Roller Canary Fanciers came up on the appeal of a few who suggested the formation of the above, which you announced in your last issue. It was agreed that it was necessary for the welfare of the Fancy that such a society should be formed in this part of the country to further the breeding and advancement of the Roller Canary, if possible, without in any way fixing an opposition or doing any harm to any club now in existence. Mr. Lyons was voted as chairman of the meeting, and he dwelt at some length on these facts, and said that this club was being formed for the purpose of educating the young Fanciers in this part of the country, and he hoped that everyone present would thoroughly understand that we did not intend to go in for opposition to the Mother Club, the British Roller C.C.. This idea was backed up by many speakers, including Messrs. Foulds, Wareing, Parr, Whittaker, Lord, Barcroft, Whiteley, and others, all of whom made some very interesting suggestions. One dwelt on the fact that it would be the duty of this club to bring about a kind of judging competition at many of its meetings, and thereby instruct one another in the different tours and their value in our birds' song. Another had something to say about rings for our members, which brought about a general feeling that at some future time we might arrange with the B.R.C.C. and no doubt come to an agreement. So, after a pleasant hour, we got to real business, and commenced to enrol members, and soon reached the grand total of 38, which was admitted to be very encouraging to the promoters. After this the following minutes were passed: That it be named the Provincial Roller Canary Club, the headquarters to be at the Swan Hotel, Fountain Street, Manchester, and that we hold our meetings at this place on the last Saturday in each month at 6 p.m. prompt, on and after the 25th of April next. The following gentlemen were elected as officers: President, Mr. J. Lyons; vice-presidents, Messrs. S. G. Parr and J. Whiteley; treasurer, Mr. A. Percival; secretary, Mr. W. Whittaker; committee, Messrs. G. Wareing, A. Cave, A. Foulds, C. E. Wilson, W. Massey, J. Bramhall, E. Lord, J. Burton, and A. Leach. All Fanciers and friends are invited to attend our next meeting at headquarters on April 25th, at 6 p.m. Any further information will be gladly given by the Hon. Sec., W. Whittaker, Rose Street, Moses Gate, near Bolton. W. WHITTAKER, Sec.

HAWFINCHES AT THE PALACE SHOW.

SIR,—I hope Mr. Gilmonr will now study the normal type of a true Fancier and in future try and act up to it, instead of assuming to be an authority on the Hawfinch and writing to CAGE BIRDS, making statements that are absolutely untrue and absurd. With reference to his remark that I "wanted to purchase his bird," I beg to inform Mr. Gilmour that this is only another of his assumptions, as I have not yet seen his Hawfinch. If at any time, however, his bird should score over mine, even should I not agree with the award, I promise him not to lower myself by insulting and doubting the integrity of the judge, or of himself either.

HERBERT W. AXE.

SIR,—With reference to the winning Hawfinch at the Palace, is Mr. Gilmour aware the same Hawfinch won at the Palace in 1907? It was hand-reared by me and named "Perfection," and I consider perfectly deserves his name. He is the correct type, and the best coloured finch ever seen in a cage. All the noted fanciers were anxious to purchase him. All credit to Mr. Hills; I always consider him a tip-top judge. I might say I have hand-reared Hawfinches for 20 years, and should know a good one when I see one. I have won three firsts at the Palace with Hawfinches, and consider Norwich type proper birds for the show bench. I am glad Mr. G. examined the bird well at Edinburgh. Keep that type in your eye, Mr. G., and you will he "in the know" at the next Palace show. Pleased to hear of all your own winnings up in Scotland; I think you have been "in the know" fairly well. S. HAKES.

THE HYBRID CLASSES AT DUDLEY SHOW.

SIR,—I was surprised to see the statement made in Mr. Ward's letter in last week's CAGE BIRDS, viz., "A Mulo is not a Hybrid nor a Hybrid a Mule." Now, on looking up the meaning of the words Hybrid and Mule, I find a Hybrid is a mongrel (Hybridous, produced by the mixture of two species). A Mule is an animal or plant of a mongrel kind. Does Mr. Ward consider a cross between a Goldfinch and Canary any less a mongrel than a cross between a Goldfinch and Bullfinch? As the classes in schedule read: 17, Light Canary-Mule or Hybrid, including Canary Bullfinch; 18, Dark Canary Mule or Hybrid, I am still of the opinion that neither of the Hybrids I mentioned last week had any right to compete in Class 17.

J. A. LEES.

SIR,—Mr. Ward says that Hybrids could be entered in either of the classes at Dudley Show. Such an assertion is "tommy rot," pure and simple. The class distinctly reads, "Light Canary Mule or Hybrid, including Canary-Bullie." And let me here state that Mr. Ward is labouring under a delusion when he says that a youngster with a Canary for one parent is a Mule, and one from two British birds is a Hybrid. It is nothing but a fallacy. All are Hybrids. The word "Mule" is purely a slang expression, and ought to have been left out of the schedule atogether. The class ought to have read (and there is not the least doubt it was meant to read), "Light Canary Hybrid, including Canary-Bullie." There wouldn't have been any mistakes then, either by the exhibitor or the judge. T. JOHNSON.

MORPETH WAKES FROM SLUMBER.

SIR,—Mr. Lackey wishes me to explain why I did not notify Messrs Marshall and Grey? Well, Mr. Lackey knows as well as I do Mr. Marshall could not get away from his business on a Saturday night, and had never once attended a Saturday night meeting. I did not say I had notified all members except one; what I said was I had notified all members possible to be present with the one exception. As for Mr. Grey, I did not consider it was necessary to notify him, because last year, shortly before the show, a member of the late society gave Mr. Grey his entries to give to the secretary, but instead of giving them to me or sending them, he returned them to the member by post, saying he had severed his connection with the Morpeth Society. Would Mr. Lackey have notified Mr. Grey after that? Now, with regard to Mr. Marshall, I did not say his report of the meeting was not a correct one (see CAGE BIRDS for February 22). I only advised him before sending any more reports to CAGE BIRDS to send true and accurate ones. Nor yet did I throw down the gauntlet, but I took it up. I can assure Mr. Marshall it is not an ambition of mine to write to the Fancy Press. If it had not been for that untrue report he sent to CAGE BIRDS regarding the winding up of the old society, I had made my mind up to let bygones be bygones. As for the district members breaking up the club, I have not the least hesitation in saying that the district member referred to was influenced by both district and town members; in fact, he made no secret of it when he said some members were not going to join if I was secretary, or unless there was a change in the management. It seems rather strange that in his report he says the chairman made some justifiable remarks concerning the breaking up of the old society, especially as he was a Morpeth man. So I take it by that he has been a party to the breaking up. Now, Sir, he knows well enough it is a long time since it was first suggested to have another society in opposition to the now defunct one, so should not blame the district member altogether. It has just been what I call a well-planned coup.

A. DIPPIE, Sec. of the Late Society.

BRADFORD'S LATEST ARRIVAL.

SIR,—At the invitation of Messrs. Ogden Bros., of Tong Street, a meeting was held at the Holme Lane Hotel on March 3rd. There were from 30 to 40 fanciers present, including Messrs. W. H. Shackleton, Ogden Bros., and J. Crowther (the Websey President). Mr. W. H. Shackleton was elected chairman for the evening, and Mr. F. Worsman proposed, and Mr. B. Worsman seconded, a motion that a society should be formed for Cage Bird Breeders and Exhibitors. After a discussion, Mr. J. Crowther proposed, and Mr. J. Smith seconded, that the name should be the "Tong and District Cage Bird Society." This was agreed to. Twenty-four members were enrolled in a very few minutes, and I think the members should congratulate themselves on such a splendid start. The following were elected officers:—President, Mr. T. Ogden; vice-presidents, Messrs. H. H. Clark and B. Worsman; treasurer, Mr. S. Rushworth; and secretary, Mr. J. Smith, 7, Rose Terrace, Tong Street, Bradford, who will be pleased to give intending members full particulars. All members are committee, and the subscription is 3s. per annum—1s. entrance fee, and the remaining 2s. before the 1st of May. The meeting night is the second Tuesday in month at 7.30 p.m., and it was decided to make the headquarters at the Holme Lane Hotel, where there is splendid accommodation. It is intended to push on with business as quick as possible, and I think the society will be strong enough in the course of a week or two to decide to join the Yorkshire Union, which would be a step in the right direction. A hearty vote of thanks to the chairman was proposed and seconded, and carried with loud applause. The chairman replied. All novices should join this society where possible, as during the evening Messrs. Ogden Bros. said they would not show at members' shows, and hoped fanciers would rally round and make the society a big success.

A WELL-WISHER.

AN ALLEGED MISLEADING ADVERTISEMENT.

SIR,—Kindly allow me in your most valuable paper to reply as briefly as possible to the letters of Mr. J. Trengove and Mr. E. Baker, of Cowes, that appeared in the last issue. First of all, can they find in my advertisements (in any of them) where I stated that I had had birds direct from these two breeders? No they cannot. I should like to ask Mr. Baker and Mr. Trengove whether they have not sold birds to others? (I know they have not to me, and I never said they had.) If so, what becomes of all the young ones bred from birds of their strains? Could not I buy birds from the breeders, who have had their strains without buying direct from them? I have purchased Norwich Plainheads of most strains, all over the country, and have also sold birds to many leading breeders and exhibitors in this and other countries, but never in all my advertisements have I ever mentioned a breeder from whom I had bought birds direct. Therefore, I fail to see where my misleading advertisement of your strains come in. Mr. Baker also says that I have never sold birds to him. Can he show your readers my advertisement, wherein I stated that I did. I think not. It is a different Mr. Baker entirely whom I sold Norwich to, and to prove what I say is correct. I have enclosed letter to the Editor. I was not alluding to Mr. E. Baker when I stated that I had sold Norwich to a Mr. Baker. He must know that there are more "Bakers" than one who exhibit in Norwich Plainhead classes. *Re* strains, supposing I had a very good strain and sold out all my spare birds to different customers, and the following year the customers sold out all they did not require, could not the breeders who bought from these customers advertise their young stock as my strain? No breeder knows where these strains get to year after year.

GEO. CUBLEY.

[Mr. Cubley encloses an undated letter, which goes to show that he sold a Norwich hen for 15s. to a Mr. R. Baker, of Bournemouth. We cannot regard this as a satisfactory explanation of the use in the advertisement of the name of a "Mr. Baker," "a leading exhibitor," and have written to Mr. Cubley to this effect.—EDITOR.]

THE RARE REDPOLL-BULLFINCH HYBRID.

SIR,—Mr. Ward doesn't seem to have much to say on the points mentioned in my last letter, but contents himself with sneering that I am "behind the times" in Hybrid breeding. Now, why on earth does he tell me that? I have known it for years. But there is consolation in the fact that someone (Mr. Ward, for instance) is up-to-date; and, well—we can't all he at the top. I suppose I shall have to remain another year or so in the rearguard, if the breeding of the Redpoll-Bullie is my only chance of getting to the front, as I am not trying for it this year. There is plenty of room at the top, so we are told, although it looks as if Mr. Ward wants no one there but himself. I am quite content, though, to remain one of the crowd.

T. JOHNSON.

THE FUTURE OF THE BELGIAN CANARY.

SIR,—In reply to Mr. Harrison's letter in your issue of last week, I would only be too pleased to assist in any way to attain the desired object, though I fail to see what good a joint meeting at this stage could do. In the first case the United Kingdom Belgian Canary Association have a model and standard of points, and contemplate only giving their patronage in future to societies who engage recognised and competent judges of their variety, and who will judge to our standard. The National Derby Ornithological Society have adopted a model, and, in justice, we must give them time to see how it works, and if it is acceptable to all the other Scotch Fancy Societies. It is quite apparent to me that the Belgian as an exhibition bird in Scotland is doomed, unless we can find the judge who has the courage of his convictions, and throw out all exhibits in Belgian classes who are not straight on legs and back. I am quite convinced our modern Scotch fanciers' craze for top end is so great that the fanciers are quite prepared to sacrifice all the other essential properties of the Scotch Fancy, and until they fix the type of the Scotch Fancy and discontinue the eternal cribbing of the Belgian, I fail to see how the latter is to regain its former position. I hope the discussion opened up by these letters will be the means of older and more experienced fanciers giving us their views and advice, void of any personalities, for the benefit and elevation of our respective varieties, the Belgian and Scotch Fancy Canaries.

WM. B. COBB,

THE YORKSHIRE UNION AND THE CAGE BIRD UNION.

The Question of a Working Arrangement.

SIR,—I have pleasure in forwarding for publication a copy of a letter addressed to me by Mr. Lythgoe in reference to the correspondence appearing in last week's issue on the above matter, and also my reply to the same.

THE CAGE BIRD UNION.

MR. FRED HAMMOND.

DEAR SIR,—Yours of the 2nd inst. to hand. In my reply to Mr. Curtis at our recent meeting, I did not say that the Yorkshire Union had been approached re an understanding between the two Unions, but that some attempt had been made to this end, by my letter to you on the subject, which is quite within the facts.

After I had written you on the subject, the purport of your reply was submitted to my Council. In this you say that the two sets of rules "seriously conflict with each other in the matter of which should be supreme," and, further, "If the C.B.U. would give way on this point and allow the Yorkshire Union Shows to be governed entirely and absolutely by the Yorkshire Union Rules, the resolution of our last Council gives me authority to state that the way is clear for any of our societies to apply for the C.B.U. License." My Council were practically unanimous in their opinion that the C.B.U. Rules should be supreme at all shows held under their patronage.

In the face of these conflicting facts, it seemed to me useless to take any further steps at the time. As stated at the meeting, I am still anxious to come to some arrangement with your Union, so that our members may exhibit at your shows, and I have submitted another proposal to my Council, which, if they agree to, I think might conduce to this end, and if you can give any suggestions I shall be pleased to submit them.

As you have thought it proper to publish the correspondence (though I, in my turn, fail to understand your mode of reasoning) would you kindly follow it up with this letter.

Kind regards,

Yours faithfully,

(Signed) GEO. W. F. LYTHGOE.

Manchester, March 6th, 1908.

P.S.—I gather your Union are shortly holding a meeting. Would you let me know the date, so that, if possible, I can submit my suggestion to you in time for it.

THE YORKSHIRE UNION.

MR. G. W. F. LYTHGOE.

DEAR SIR,—I am in receipt of your letter of the 6th inst., and have carefully noted its contents. In face of your denial of the correctness of the report of your reply to Mr. Curtis at the recent C.B.U. Annual Meeting, I can only say that this is now entirely a matter between yourself and the reporter, although I am assured on excellent authority that the impression conveyed to me by the report is largely shared by your own members, including one, if not more, of those who were present at the meeting and heard your reply. I had to deal with the report as it was printed, which cast a serious reflection upon the Yorkshire Union, and which was calculated to show its secretary in a most unfavourable light if left uncontradicted. Having given the whole facts the publicity which the circumstances made essential, it is my joy to know that, judging from the expressions on all hands at our great meeting on Saturday, I am held to have in no way shaken the confidence which the members of the Union have invariably placed in me, and which I prize so highly. Therefore, personally, I am prepared to leave the correctness, or otherwise, of the report in the hands of those more concerned, and concentrate my thoughts on such portions of your letter as appear of more vital importance to the interests of the fancy generally.

At the outset, I would ask you, in the best spirit, when quoting me, either by letter or speech, to do so correctly, adding nothing to and withholding nothing from, that which I have actually said or written. I am compelled to make this request on account of the world of difference which a few words, either added or omitted, are apt to make in the sense and spirit of an utterance or writing. For, instance, at your Annual Meeting you are reported to have replied that the Yorkshire Union "wanted their rules to supersede ours," and again, in your present letter you quote me as having said of the two sets of rules that they "seriously conflict with each other in the matter of which should be supreme." Now, if you will do me the favour of referring to my first letter you will find that both these statements are only part of what I actually wrote, and, standing alone, are calculated to raise a feeling of hostility towards the Yorkshire Union on the part of your members, conveying, as they do, the impression that the Yorkshire Union could recognise no rights except their own, and suggest ve of an attitude of independence and superiority over any and all other bodies. No wonder that your members could see no possibility of a working arrangement under such conditions. Such arrogance, however, I can truthfully say, finds no place in the minds of those who form the Yorkshire Union Council. What I did say concerning the two sets of rules was "that they seriously conflict with each other in the matter of which should be supreme *in the case of a Yorkshire Union show holding a C.B.U license.*" What an enormous difference the few words underlined, which you omit, make in the meaning and spirit of this sentence, and who can tell the effect of such an omission upon the bearing of the whole case? Several of our members have already expressed to me word and letter the justice and undoubted right of the Yorkshire Union to insist that its own shows shall be governed by its own rules.

Again, you place into my mouth words which were originally your own when you quote me as saying, "If C.B.U. would give way on this point." You will, doubtless, remember that in expressing your own private opinion on the matter of the Yorkshire Union shows being governed by Yorkshire Union rules, you said "the C.B.U. might give way on this point." Having thus appealed for fair and straight dealing, which I have no reason to doubt you will not deny me in future, I pass on to the more pleasant and important part of your letter.

I am pleased to be assured that you are "still anxious to come to some arrangement" with the Yorkshire Union. I confidently reciprocate such a feeling, and, on behalf of the Yorkshire Union Council, I can assure you that any suggestion which your Council cares to submit will receive the utmost attention and consideration consistent with the dignity, independence and well-being of the Yorkshire Union. The sole desire of my Council in this matter is that the undoubted power and influence of both Unions may be exerted on behalf of the truest interests of the fancy generally—a consummation to be devoutly wished for, and, in my opinion, easily attainable without loss of honour or self-respect to either side.

I shall have pleasure in calling a meeting of the Yorkshire Union Council for Saturday, March 28th, specially to consider this very important matter, and I trust by that time to have your suggestion to hand in order to be able to lay the same before the members.

Assuring you of my continued respect, and with kind regards, believe me,

Sincerely yours,

FRED. HAMMOND,

Hon. Sec. Yorkshire Union C.B.S.

Bradford, March 9th, 1908.

SAND OR SAWDUST: WHICH IS PREFERABLE?

SIR,—I have noticed that several prominent Fanciers, giving their views in CAGE BIRDS, recommend sawdust as a substitute for sand in the bottoms of cages. Now, every careful Fancier examines his birds' excrement daily, and this tells him more accurately than anything else what condition his birds are in. With sawdust I find it is impossible to judge the state of the droppings, as they are at once absorbed by the sawdust. I find, too, that a great deal of seed is wasted by the birds knocking it out of the hoppers into the drawboard, where it gets mixed with the sawdust and is thrown away. Whereas, if you use sand, as the birds are always down there pecking about, they come across the seed and eat it. I will admit that sawdust is cleaner and warmer, but taking everything into consideration, I think sand is the best for the average Fancier.

HAROLD GIBBONS.

HIGHGATE, HAMPSTEAD AND DISTRICT CAGE BIRD SOCIETY.

SIR,—A meeting was held on February 28th in the Spencer Hall, Dartmouth Park Hill, N.W., as stated in last week's CAGE BIRDS, to form a new Cage Bird Society for this district. Punctually to time fanciers began to arrive, and soon the hall was well filled. Mr. George Gardner was elected chairman for the evening, and called upon Messrs. Neal and Reynolds to explain the purposes of the meeting. After the matter had been fully dealt with by these gentlemen, the fanciers present decided to form a society for the district, to be called "The Highgate, Hampstead and District Cage Bird Society." Names were handed in for membership, and 40 were duly elected, which we think was very good for the first night. The following gentlemen were elected officers of the society:—Chairman, Mr. George Gardner; Vice-Chairman, Mr. W. Ward; Committee, Messrs. Shakespeare, Andrews, Pile, Hyde, Barnes, Eastoe, Knight, Rollinson, Cooper, Street, Coventry, and Yardley; Hon. Treasurer, Mr. A. Fisher; Hon. Asst. Secretary, Mr. G. H. Neal; Auditors, Messrs. Shearen and Horner; Hon. Secretary, Mr. W. Reynolds, 62, Langdon-road, Upper Holloway, N., who will be pleased to receive names of other fanciers in this district who wish to become members. Meeting nights were arranged to take place the last Friday in each month, at 8.30 p.m., in the same hall, which is very conveniently situated, both for the trains, trams and 'buses, and also for fanciers living in the Barnet and Whetstone districts. The annual subscription will be 3s., with a nomination fee of 1s., but anyone joining the society on or before March 27th, which is the next meeting night, will be allowed to do so without nomination fee being charged. So fanciers hurry up and send names to the secretary, and save 1s. It is hoped that with a good breeding season many good birds may be shown by the members of this new society.

W. REYNOLDS, Hon. Sec.

BORDER FANCY CLUB AND ITS JUDGES.

SIR,—I thank both your correspondents of last week re the above, as their letters, although against my views, let in a little side-light, and enables one to see how the wind blows. In Mr. Turnbull's letter there is practically nothing to answer, but perhaps I may be able to enlighten both him and many more of our members who passed this rule without giving it due consideration. Firstly, it is a very poor Fancier who has not won during the present season under the dozen judges. Mr. T.'s next sentence coincides with my own ideas, viz., that it will help entries if all the popular judges be engaged. Re societies asking Mr. Jamieson's assistance, they (the members) are only adding insult to injury by having such a rule, whereby the secretary's many arduous duties will be multiplied. My own opinion is that he has got far too much work already, which many of the members do not appreciate. It is truly a work of love, as he receives no financial remuneration. I would ask how Mr. Jamieson is to know when any member is engaged by the limit (two shows), and which societies have engaged them, unless by a host of unnecessary correspondence? To the last clause of Mr. T.'s letter re increasing the number of our judges I agree, but let societies, if they are not satisfied with the present judges and want a change, select from amongst the members men they think will act staightforwardly, without fear or favour, in placing their awards. And seeing that most of the club members are also members of committee of other societies, they have the power to engage fresh judges, if that is desired. When at the general meeting, if members did not feel confidence in the judges now acting, or wished for some more, they had only to ask societies through the Press, or, as I have already stated, have asked the members present to give a few more a chance, rather than engage one judge so often. If they had done either no one could have had any aversion. But by adopting this rule they are using coercion and violating the freedom and privileges we have hitherto enjoyed, and I am afraid that any member who is working for the welfare of the club will look upon this as an insult, especially if they have ever acted as judges. What I strike out for is liberty, pure and simple, and if the club cannot allow its members such in a case of this kind, they are acting entirely outside their own interest if they want to obtain members and keep their present ones. In answer to Mr. Welsh, re judges who do not adhere to this rule not working for the club's interests, his idea is quite at sea, and, like many more of the points he brings forward, appears as if he has not given it serious thought. That the rules of a club must be preserved we all agree, and as he will see from the above, there was no cause for such a rule, and it is the duty of any member to point out the error into which they have fallen. Our duty to one another is to accomplish and create unity between those societies which ask for the club's patronage, and the judges they employ from amongst our ranks, and between the club in general and all its members. We should aim at a straightforward, honest policy for the welfare of our favourites, without embittering the feelings of anyone who makes them his hobby. Regarding the dozen of members he says know as much as many of the prominent judges, that has to be proved. I only hope this is so, but I am afraid many of them will make better critics after the judge has selected the best from, say, a class of twenty or so, than they would appear if left to judge the class by themselves. I have seen some pull a judge's award to pieces in five minutes' time with apparent ease, after he had spent nearly all day in pleasing himself.

J. PATTERSON.

SIR,—May I, though not yet a member of the B.F.C.C., give my views of the new rule? I quite agree with your correspondents, Messrs. Welsh and Turnbull, and I was present at a meeting of the Dalkeith and District C.C. on March 7th, when the subject was discussed. The members were unanimously in favour of the rule. But why was it necessary to pass such a rule? I am sure there is no such rule in force among any other body of Fanciers or specialist clubs in England, and the support it received from the Border men indicates the fact that such a rule was really wanted here. Surely there was something "rotten" in the State of Denmark; but you have to get them one by one before you can get the true reason for the passing of that rule. Then you hear that it is simply to stop the mutual back-scratching of a clique that the rule was passed, and I say, All honour to him who made the motion. It will give a new lease of life to the club. There will be fair play for the novice and less deck-sweeping by judge exhibitors. Re Mr. Patterson's statement that some are going to defy the club, I hope that Border Fanciers, members or not, know how to deal with that. Don't put a bird under them. Surely this is a case of the tail wanting to wag the dog. I hope that some in the know will give their views. What of the one who said he used to be "in it," but since he gave up judging could not win? What about birds out of tickets and claimed at more money than winners? What of judges who could not face exhibitors? What of birds washing eye-marks off? Speak out, Campsie! From these we are to be delivered! Give us, exhibitors, some of your experiences under these most wise judges; it will make grand reading. These things require drastic remedies. As the Heelanman said whose wife underwent an operation under choride o' lime, "it's bound tae purify."

J. STEEL.

SOME EARLY MULES.

SIR,—Being a constant reader of your valuable paper, CAGE BIRDS, which is the best and most interesting and up-to-date Fancy journal, I thought I would send a few lines of interest to your readers. A week before last Christmas I bought a wild cock brown Linnet and put him in a flight along with a Norwich Green hen, and at the time of writing I have a couple of Mules from them out of three eggs. The Mules are now two weeks old, and are likely to live. Several of my brother fanciers told me that I would not have any luck, as the Linnet was a wild one, and it was too early, which I knew. I simply put them together, however, to get them used to one another, which they have done with a vengeance. I live 20 yards from a railway siding, where shunting operations are going on day and night, so you see the vibration has not interfered with the incubation of the eggs as some of our brother fanciers say it does. I wish your paper every success, and a yet bigger circulation, of which it is deserving, as I have learnt some good hints from it.

RATHER EARLY.

A STANDARD SHOW-CAGE FOR BRITISH HARDBILLS.

SIR,—I read with great pleasure the report of the National British Bird and Mule Club meeting held at the Crystal Palace on February 8th, and what surprised me most was to see a well known Scottish exhibitor travel to the above meeting and make the proposal for a uniform show cage for Hardbilled British, when the same gentleman strongly opposed from the chair the very same proposal, made at the Scottish British Bird and Mule Club annual meeting in Edinburgh just twelve months ago. This proposal was made by Mr. George Marlin, of Hamilton, and came under a very heated discussion. I congratulate Mr. Arrighi on his conversion. Perhaps we may hear from Mr. Marlin after seeing this letter, as I know he is in favour of a uniform show cage, or anything that is fair and straightforward. I am glad to see that Mr. Arrighi has had the scales taken from his eyes so as to enable him to see the necessity of a uniform show cage, and I hope to see him take up the same for the S.B.B. and M.C. I think it is much more needed in Scotland than over the Border, and seeing he had such influence against it at Edinburgh, the same influence used in favour of it would go a long way in favour of its adoption by the S.B.B. and M.C.

A WELL-WISHER OF THE S.B.B. AND M.C.

STANDARD LENGTH OF THE YORKSHIRE CANARY.

SIR,—I have read the letters of your correspondents re the standard length of Yorkshires with great interest. I think that 6¾ inches is an ideal size, but I cannot see for the life of me the reason why a good 7in. bird should be passed over and an undersized bird should win. We all look for undersized birds to be better than the over-sized ones as regards showing. The bird that was said to be 7⅜ inches I have closely compared with a bird of mine, and if anything it is slightly smaller, as I have measured mine on two or three occasions, and can only make my bird go 7 inches at the most. Now, I want to ask for the opinion of other fanciers as to what they consider an ideal pair for showing at matched pair shows. Lately I saw two birds matched, and neither went more than 6½, yet they beat a pair of 7-6½. On asking why, and also if they were likely to produce winners, I got what I think was a funny answer. I was told they were typical birds and the cock a splendid show bird in itself. As regards their produce my informant said, "No, I do not consider they will produce winners." He also informed me that he had not got second sight. The fault of No. 2 pair was that the cock was a little rough. This rough bird won cup in 1906. Soon after these pairs met again, No. 2 getting easy first, and No. 1 in first was said to be a little too small. Should we judge the birds on their merits, or on what they are likely to produce?

BIRD LOVER.

Correspondence continued overleaf.

PROPOSED OPEN CAGE BIRD SHOW FOR STONEHOUSE, N.B.

SIR,—A meeting will be held in the Public Hall, Stonehouse, on March 21st, at 7 p.m., for the consideration of the above. All Fanciers desirous of becoming members are requested to attend. GEORGE MCALPINE.

A RETURNING OF THANKS.

SIR,—Kindly allow me a space in CAGE BIRDS to thank all Fanciers who so kindly helped me to get another start—Mr. C. Pearce (Abingdon-on-Thames); Mr. F. Turner (Clitheroe); Mr. J. Iveson and Friend (Otley); Miss N. Watson (Ireland); Mr. E. Leech and G. W. Jones, Secs. and members and friends of the Bournemouth C.B.S.; Mrs. Maine, Mrs. Phillips, Mrs. Perry-Crooke, Miss Cooper, Miss Chcetham, Miss Ashford, Councillor Webster, Messrs. H. T. Neale, Clements, R. Baker, F. House, W. O. Brooke, Cook, Winter, A. F. Grant, Gerry. I wish to thank all these most heartily for their kindness. S. W. KEARL.

LENDING BIRDS, AND OTHER MALPRACTICES.

SIR,—Seeing "Fair Play's" letter in this week's CAGE BIRDS, I thought the following would interest Fanciers. A well-known Welsh judge called on a friend of mine and asked him if he wanted a champion Yorkshire cock, price 50s. My friend called at his house and gave 40s. for it, being told by the seller that he bred the bird, he showing him the supposed parents. But what a rude awakening! A few days after another fancier in the district, on seeing this bird, claimed to have bred the same; which, without a doubt, he did. Now, if a fellow member of the same club will do such a dirty action, what must we expect from strangers? I have been waiting to see what action the club is going to take re the above. Now, members, wake up, see that justice is done, and get rid of such members. J. W.

WHERE DOES THE COLOUR COME FROM?

SIR,—Mr. Metcalfe will find out where Cinnamon Marks come from if he will refer back to how the Yorkshire was made. The same thing applies to the Green Norwich. Yes, Mr. M., you have seen the Greens from the Cinnamon in Liverpool; that is true, the same birds giving a good account of themselves on the show bench. I could count a few that have gone to Liverpool, and they will go again. As I told you in my last, colour has to stand down when a real good typed bird comes along. One bird I have watched this last season has won all along the line; the judges have made no mistake in him. Colour has to take a back seat when he has been about. If the novice will work on the lines I quoted last week, he need have no fear. He can start with two cocks and four hens. If he gets a clear or lightly marked bird he is all right. They will come in for clearing the pencilling of the green birds. They are being bred this way in Liverpool at the present time, Mr. Metcalfe, and plenty of birds of this blood have done good service in all branches of the Fancy. I have seen five clear yellow cocks and seven green hens bred this way, and good birds, too. Would Mr. Metcalfe believe that some of the best birds of this last season (I mean birds that have won) are brimful of Cinnamon blood? I suppose that will be news for him. Respecting this wonderful colour of the Liverpool Green, I know myself of a certain Green in Liverpool (mind you, a winner) and some Fanciers like its colour, others don't. That is just to show you that the Green men don't all see alike as regards colour. Now, Mr. Metcalfe, you say 95 per cent. are bred in Liverpool. What about the Greens from Yorkshire? Also the Buff Green you mention in your article, shown by Thompson; also the Yellow Green hen winner of the rose bowl at Altrincham and special for best Green at Scottish National; also the birds from Cheshire and also the birds that I know that have gone to Liverpool? I could name a few birds that have won in the past, too. Give other breeders a little honour.

JUST PAST THE NOVICE STAGE.

Great Re-union of Yorkshire Societies.

Splendid Social and Distribution of Prizes.

The Hand of Goodfellowship Extended to the Cage Bird Union:- Working Agreement Foreshadowed.

One of the largest, brightest and most successful birdy socials ever held in Bradford, or for that matter in any part of the country, took place at the Market Tavern, Godwin-st., on March 7th, the event being the amalgamated prize distribution of the four societies having their headquarters in Bradford, i.e., the Yorkshire Union of O.S., having a total membership of about 1,100; the Yorkshire Canary Club, with 150 members; the Cinnamon Marked Y.C.C., also with about 150 members, and the Bradford and County British Bird and Mule Club, the new venture of the Bradford fanciers.

A Magnificent Attendance.

A large number of visitors put in an appearance, some of them from a considerable distance, but of course the bulk from Bradford and the surrounding districts, the total number being about 200. The room in which the meeting was held is a large and commodious one, but it was taxed to its utmost limits by such a large influx of fanciers. The following is a list of fanciers who were present:—Mr. D. Sunderland, President of the Y.C.C., who ably officiated as Chairman, assisted by Mr. H. W. Battye, President of the Yorkshire Union; Mr. J. Greaves, President of the C.M.Y.C.C.; Mr. W. A. Cowgill, President of the B. and C. B.B. and M.C., further supported by Mr. F. Hammond, Secretary to the Yorkshire Union; Mr. R. Garnett, Secretary to the C.M.Y.C.C.; Mr. J. Greaves being also the Secretary of the Y.C.C.; W. R. Myers, Secretary B. and C. B.B. and M.C.; Mr. F. Carl (CAGE BIRDS), and Mr. J. W. Ramsden, London, Mr. G. Ireland, Driffield, Mr. A. Hirst, Accrington, Mr. D. Duncan, jr. Harrogate, Mr. F. Henderson, Barrow, Mr. H. Towers, senr., Steeton, Mr. F. Boyle, York, Messrs. P. Clayton, R. E. Hellewell, A. Lloyd, J. Mottram, E. Robertshaw, H. W. Walsh, S. Hellewell, F. Armstrong, F. Townsend, H. Dawson, Halifax, Messrs. W. Wadsworth, H. Lodge, of Skelmanthorpe, Mr. W. Broughton, of Wilmslow, Messrs. A. Kent, T. Bentley, T. Smith, of Cleckheaton, Mr. A. Bearden, of Brighouse, Messrs. A. Livesey, A. Hudson, of Bingley, Messrs. A. Blackburn, E. Edison, R. Hird, of Dewsbury, Messrs. T. Tillotson, C. Thornton, Otley, Mr. W. Booth, Liversedge, Mr. F. Fawcett, Gildersome, Messrs. J. W. Bedforth, S. Metcalfe, Birstall, Mr. A. E. Pullan, Durley, Mr. J. Sawley, Keighley, Messrs. A. Frankland, H. Hardaker, D. Robinson, Guisley, Mr. W. Mitchell, Mirfield, and Messrs. W. Crabtree, S. Dean, A. Morley, F. Self, J. Fieldhouse, J. Towler, H. Hudson, A. Bottomley, F. Oddy, J. Clark, W. Bromham, H. S. Naylor, W. West, T. Millburn, C. Duckworth, R. Sutcliff, W. Blakey, J. H. Fowle, T. Fortnam, J. Mann, J. Edmondson, H. Smith, S. Jagger, H. H. Clark, O. Atkinson, W. H. Dawson, J. Firth, W. Sleaford, J. W. Armstrong, J. Bailey, J. Exley, A. W. Varley, F. Ludbrook, W. Wharton, H. Clegg, J. W. Hudson, J. Reed, J. Chippendale, A. Gill, F. Rhodes, W. Cruise, H. Hill, T. Clegg, F. Wright, P. Ackroyd, H. Jennings, A. Haigh, J. Wilcock, L. Hodgson, R. Halliday, E. W. Johnson, H. Simonett, A. Hartley, H. Grundy, A. Jowett, T. Appleyard, E. Swaine, J. W. Holmes, T. H. Inman, J. Hirst, Ogden Bros., F. Bartle, J. A. Kershaw, W. H. Shackleton, E. B. Denton, R. Walderson, A. Edmondson, G. R. Rushworth, G. White, H. J. Chittenden, H. Drake, M. Johnson, E. Shepherd, O. Mitchell, P. Drake and Son, J. Battye, J. R. Ackroyd, J. H. Ackroyd, F. Richardson, G. Wellock, H. H. Towers, A. Shaw, W. Davy, E. Padgett, J. Hartley, J. Lambert, A. Cooper, H. B. Townend, T. Wood, P. Stansfield, E. Pollitt, W. Ploughwright, G. Hemming, H. Schofield, S. Briggs, A. Holden, C. Shaw, H. Simms, S. Wilcock, H. Coates, W. Morement, E. Mason, A. Cragg, R. Kitchen, J. McKay, R. H. Lowes, T. L. Whiteley, B. and W. Worseman, J. E. Stafford, W. Cawthra, W. Bateman, L. Robinson, J. Wilson, J. Townend, H. Taylor, J. Crowther, John Taylor, and last, but not least, W. Mundell, from Bradford and its immediate vicinity. Several other gentlemen were present whose names we did not catch.

Prompt on 6 o'clock fanciers began to arrive in large numbers, and in good time Mr. D. Sunderland commenced operations by calling upon Mr. Pollard to oblige by singing "Hybria the Cretan," which he did in pleasing style, which called forth the applause of the audience. This item was followed by a pianoforte recital by Mr. Leach, the able pianist and accompanist for the evening, the efficient rendering of which gave great satisfaction. Messrs. Wright and Ackroyd next gave an attractive duet, entitled "Roses," after which Mr. Smith delighted the house by a humourous song, entitled "The Covent Garden Ball."

The Y.C.C. Competition Winners.

Then came the presentation of prizes to the successful competitors in connection with the Yorkshire Canary Club, this honour falling, of course, to Mr. D. Sunderland, the chairman of the society, who did justice to his work in a very able manner. Mr. Sunderland gave a short address on the society, its membership, work, etc., and specially enjoined all novices to enter the society and participate in some of the good special prizes provided. The total value of the prizes offered amounted to no less than £37 9s., and the competitions were keenly fought throughout. The central and most valuable trophy is the Yorkshire challenge cup, value 20 guineas, the successful winner being Mr. W. H. Shackelton, who throughout the ten shows at which this cup was competed for, scored 136 points, this win taking with it the Y.C.C. 21/- medal. Mr. Sunderland, in presenting the cup and medal, complimented Mr. Shackleton upon his win. Mr. Shackleton, suitably responded, and said he was pleased to be the winner of the "Blue Riband" of the Y.C.C., and to see that it was a proof that "There is life in the old dog yet." The second prize for this competition was Messrs. Bailey and Swanger's cup, value £2 10s., and this was won by the donors themselves, with 132 points. The Chairman complimented Mr. Bailey upon the hard fight he and his partner had made, and hoped to see them more successful another year. "Jimmy" however could not be prevailed upon to respond, perhaps the company was too big for him. The third was a teapot, value 25/-, presented by Mr. R. P. Broome, and this was secured by Mr. J. Wilcock, with 111 points. Joe is another poor talker (sometimes) and again there was no response. The fourth prize was secured by Messrs. Ogden Bros., with 81 points.

The "Ramsden" challenge cup, value six guineas, was won by Mr. W. Wadsworth, who scored 101 points at the ten shows for this competition; the win carries with it a guinea gold medallion and a valuable teapot, the runner up in this section being Mr. J. Wilcock, with 92 points, securing £1 in coin of the realm, useful, "Joe," isn't it? Third place, Messrs. Bailey and Swanger, who received 15/- cash prize (86 points) and wonder of all wonders the handling of the cash made "Jimmy" talk. This reminds one of the "fortune-telling fraternity"; they cannot tell you anything unless their hands are crossed with gold. Buck up next time; prepare for it beforehand. Messrs. Ogden Bros. scored 67 points, and gained 10/- in cash as fourth prize. Novice competition: this also runs through ten shows, the first prize being a splendid cup presented by Mr. J. E. Brotherton, and a "Ramsden" teapot, value 25/-. The fortunate winner here is Mr. W. Helliwell with 53 points, the runner up being Mr. H. H. Towers with 33 points. The latter received 10/- in cash. Third place was secured by Mr. W. Blakey (5/- in cash), his score being 15 points. The competition for those members of the Y.C.C. who reside outside the county of the White Rose, proved a very tight fight, and a curious coincidence here occurred, viz., the same number of points divided the first two runners as in the Y.C.C. challenge cup competition, i.e., four. Mr. W. Broughton, of Wilmslow, secured first place with 119 points, thus winning Mr. Sandiford's cup, value £5 and a "Ramsden" teapot, two splendid specials. Mr. Broughton is to be congratulated on his success. The second prize, a splendid oil painting by Mr. Davy, value £2 10s., was won by Mr. G. W. Cuthbertson, of Darlington, by 115 points, and no doubt the picture will form another good special to Mr. C's collection.

Mr. A. Hirst, by scoring 25 points, gained the half-guinea cash special, presented by Mr. G. W. Cuthbertson, for 3rd place in this competition. In addition to the above a long list of minor money prizes for points gained by third, fourth and the winners, has been awarded to members of the Y.C.C., particulars of which have already appeared in CAGE BIRDS.

Wins Under the Yorkshire Union.

Mr. Wright next rendered to the satisfaction of all that grand song, "Asleep in the Deep," after which Mr. H. W. Battye was called upon by Mr. Sunderland to present the prizes to the successful competitors of the Yorkshire Union. Mr. Battye's remarks upon the Yorkshire Union were, that the Union should not cater solely for the Yorkshire bird, as he thought they had done at one time, but should try and do more to encourage other branches of the cage bird Fancy, and he was pleased that at present there was a prospect of this being the case. He also stated he was not fond of being the central figure, and would be glad when his work was over.

Mr. Battye then presented the prizes. The principal one was the "W. H. Shackleton" challenge trophy, the three highest birds of each competitor to count for points. 1st and medal, value £1, Messrs. Bailey and Swanger, with 304 points, second place falling to Messrs. Ogden Bros., who scored 268 points, for which they received a medal to value 15/-. Mr. J. Wilcock won the third prize, a medal value at 10/-, his score being only one point behind the previous winner, viz., 267 points. Fourth prize, medal to value 7/6, fell to Mr. W. H. Shackleton, by his scoring 257 points. The "H. W. Naylor" challenge cup, value £5 5s., three birds to count, to be marked "cup," 1st and medal, value £1 1s., Mr. W. H. Shackleton, 200 points. The teapot, value £1 10s., presented by Mr. J. W. Ramsden, to person gaining most points at the Union shows, with birds moulted on his peppers: First, Messrs. Bailey and Swanger, 304 points; 2nd, medal won by Messrs. Ogden Bros., who scored 268 points; 3rd medal, won by Mr. W. H. Shackleton, with 257 points.

Next in turn were the Yorkshire Union novices, whom Mr. Battye described as "the backbone of the Fancy," also as a "terrible lot." Why the latter, one hardly knows, unless it is on account of the large classes they provide the judges with, or perhaps on account of the severe cross-examination some of the novices subject one to. The principal winner in the novice section was Mr. A. Frankland, who secured the prize, value £1 1s., presented by Mr. H. H. Towers (one of last season's novices) for most points gained by a novice during the season in Yorkshire novice classes. Twelve novice medals value £1 1s. each, were given for the most points, nine in the Yorkshire section and three in the novice section. Yorkshire section: 1, A. Frankland, 243 points; 2, H. Lodge, 200 points; 3, F. Townsend, 150 points; 4, P. Drake and Son, 142; 5, Shaw Bros., 135; 6, Allen and Swaine, 116; 7, J. R. Ackroyd, 115; 8, H. Coates, 113; 9, J. Chippindale, 112. Norwich section: 1, J. W. Holmes, 226 points; 2, J. Mottram, 142; 3, A. Lloyd, 113.

The musical part of the programme was once again proceeded with, Mr. Ackroyd contributing a solo, followed by a humorous song, by Mr. Smith, entitled "How Dare You," both gentlemen being greeted with loud applause.

Prize-winnings in the C.M.Y.C.C.

The next item was the presentation of prizes in connection with the competitions of the C.M.Y.C.C. Mr. Greaves, as the President of the Society, officiated over these pleasant duties. Mr. Greaves was suffering from a severe cold, and therefore called upon the Secretary, Mr. R. Garnett, to give a short report on the work of the society. This report was very gratifying to the members, showing as it did the very satisfactory state of the variety for which the society caters. The members have shown exceedingly well at all the shows, the average per class throughout the season being 16½ entries, the highest number in one class being 25 and the lowest seven, truly a remarkably consistent achievement. Open competition: First prize, a splendid tea urn, value £4 4s., captured by Messrs. Ogden Bros., with a total of 185 points; second prize, cup, value £2 2s., presented by Mr. J. Sandiford, falling to Mr. J. Wilcock, who scored 135 points; 3rd, gold club medal, value £1 1s., being won by Mr. A. Cooper, who scored 105 points, Mr. A. Hirst attaining the fourth position by a total of 104 points, thus taking the pair of water colour paintings, framed in oak, to value 12/6, and Messrs. R. Sutcliffe and Son and Mr. W. H. Shackleton tied for 5th place, each scoring 68 points.

The novice competition proved to be a tight race all through, first place eventually being secured by Mr. H. H. Towers by 68 points, the prize being a splendid rose bowl, value £2 10s., presented by Mr. J. E. Brotherton. Mr. W. Blakey won the pair of water colour paintings, value 12/6, for second prize, his total being 54 points, closely followed by Mr. A. Blackburn at 51 points. The latter took the medal value 10/6, given by Messrs. R. Sutcliffe and Son, for third place. An electro-plated waiter, value 10/6, presented by Mr. H. Dobson, fell to the lot of Mr. T. Wood, for 15 points for fourth prize, the fifth prize, teapot, value 7/6, given by Mr. T. Bentley, being won by the donor himself with 10 points. Special prize, 10/6 in cash, presented by Mr. J. F. Gibbons, for most first prizes gained by a novice, was divided by Messrs. H. H. Towers, A. Blackburn, and W. Blakey, who each scored one first each. Special for most points with consolation cards, given by Messrs. Ogden Bros., was won by the donors.

A New and Flourishing Society.

Mr. Smith next favoured the audience to another humorous song, which fairly brought down the house after which Mr. W. A. Cowgill was called upon to present the prizes to the members of the new society, Bradford and County British Bird and Mule Club. Mr. Cowgill proved himself an adept at making bulls, causing endless merriment to the company assembled. He dwelt at some length upon the objects of the society and laid special stress upon the fact of the membership not being confined to Bradford and district, but, as its name implied, to the whole county of Yorkshire. He stated that the outside districts had not contributed as many members as the promoters expected. He hoped, however, this would be remedied in the near future. The members had shown well during the season, and a good percentage of the prizes had been captured by them at the shows. It gave him great pleasure, he said, to present the prizes, and he hoped that another year the prize list would be greatly augmented. The open competition was won by Mr. E. Mason, a son of the redoubtable Philip of that name (seems to be "following in father's footsteps"), the second being secured by Mr. Jonas Edmondson, Allerton. Mr. T. H. Inman had the honour of being placed third, and Mr. W. A. Cowgill fourth, both of Bradford. Mr. T. Boyle, of York, took the fifth position.

In the novice competition, the novices had perforce to show amongst champions, and the winner, Mr. D. Duncan, junr., of Harrogate, actually scored more points than the winner in the open section. Messrs. Dean and Jowett, Great Horton, won the second position, closely followed by Mr. T. Wood, who took third prize, the fourth being secured by Mr. W. R. Myers, the energetic secretary of the club. Messrs. Wright and Ackroyd were next in turn and favoured the company with a well-rendered duet.

The Yorkshire Union and the C.B.U.

Mr. Sunderland then called upon Mr. F. Hammond, Secretary of the Y.U., to propose a vote of thanks to the contributors to the special prize fund. This speech proved to be one of the features of the evening, Mr. Hammond being evidently moved by such a large and unanimous gathering. He made a slight reference to the late lamentable split in Y.U. circles, being pleased to see that now the dark clouds had rolled away, leaving only the silver lining, and that the Y.U. was now recognised as a mighty power in birdy land, a power that could be used for good or ill, and he hoped its weighty influence would not be used for fanciers' own ends, but for the Fancy in general. He also said a few words upon the subject of the Y.U. and C.B.U., stating that in his opinion, to study the true interest of the Fancy, a settlement and an honourable settlement could easily be arrived at, and that the C.B.U. should certainly allow the Y.U. to rule in their own sphere. He commented upon the very valuable array of prizes on the table before him that evening, and proposed a hearty vote of thanks to the donors for assisting in getting together such an artistic display. Mr. R. Garnett seconded in a hearty and feeling manner, dwelling slightly upon the cultivation of the novices, in the formation of the different clubs, a feature that at present was receiving great consideration.

Mr. J. W. Ramsden responded on behalf of the donors. One thing he was pleased to see, he said, and that was that many of the prizes were things that a faucier's wife could use, and in his opinion fanciers' wives had much to do with the success of fanciers' ambitions. Mr. Ramsden claims to be descended from Yorkshire people, but he seems to have lost the Yorkshire dialect. Just try and come another year, Mr. R., and in the meantime try and learn to talk "Yorksher." Mr. W. H. Shackleton also responded, but being called upon rather unexpectedly, he had not much to say. Evidently, Mr. S. also requires a little time to prepare. He stated that he had been connected with the Fancy in one class or another since his very earliest recollections, and hoped to be able to still follow them for some considerable time. Mr. H. H. Towers also supported the response. Although only just out of the novice stages, he does his utmost to encourage those behind him.

Concluding Votes of Thanks.

Mr. R. Halliday moved that the best thanks be given to the artistes, and to the committee who had had the arrangements in hand. Mr. H. J. Chittenden seconded in a neat speech, the vote being carried amid loud applause.

Mr. R. Sutcliffe proposed that a vote of thanks be given to Mr. D. Sunderland for the very able manner in which he had conducted the meeting. Mr. J. Wilcock seconded in his usual bluff, and hearty manner, and Mr. Carl, of London, was called upon to support the proposition. Mr. Carl declared that it was the most enjoyable and enthusiastic meeting of birdy men he had ever attended. The manner in which the Yorkshireman took his wins and defeats appealed to him immensely. He dwelt on that characteristic modesty which the Yorkshireman ascribed to luck, but which, in the speaker's opinion, must be due to hard work and intelligence. He regretted the absence of Mr. A. Ambler, the winner of CAGE BIRDS £5 prize, through indisposition, and hoped he would soon be restored to health. Mr. Carl further made promises to give valuable cash prizes to each of the four societies represented at the meeting. Upon closing, Mr. Carl had a hearty cheer awarded him, and altogether was accorded a thorough and cordial Yorkshire reception. Mr. Stafford, of Queensbury, one of the volunteer vocalists, was then called upon to render a song, which he did in good style, and brought a very successful and enjoyable evening to a close.

YORKSHIRE CANARIES.

HOW TO BREED, MANAGE AND EXHIBIT.

By H. W. BATTYE (President of the Yorkshire Union) Illustrated by Messrs. H. Norman and A. J. Simpson.

Price 1/- nett. Post Free 1/1.

This book is absolutely the very best that has been put on the market. It deals fully with the Yorkshire and its sub-varieties, and should, without doubt be in the hands of every breeder of the bird of Grace and Beauty. It contains instruction upon Pairing, Breeding, Moulting, Exhibiting and how to treat this popular variety in both health and disease.

Popular Book. Popular Price. 1/- nett, by post 1/1.

"CAGE BIRDS," 154, Fleet St., London, E.C.

PEN SKETCHES OF THE CHIEF OFFICIALS.

(1) Mr. D. Sunderland, Chairman of the Gathering, and Chairman Yorkshire C.C. (2) Mr. H. W. Battye, President Yorkshire Union. (3) Mr. Fred Hammond, Secretary Yorkshire Union. (4) Mr. J. Greaves, President Cinnamon Marked Yorkshire C.C. and Secretary Y.C.C. (5) Mr. W. A. Cowgill, President Bradford and County B.B. and M.C. (6) Mr. R. Garnett, Secretary C.M.Y.C.C (7) Mr. W. R. Myers, Secretary Bradford and County B.B. and M.C.

lists, rendered "Eilleen Alannah" in a very masterly style, the whole company joining in the chorus. And well they did sing. Mr. Stafford was encored, and gave another song in great style, tho company again assisting in the chorus. Messrs. Ackroyd and Wright next gave "The Battle Eve," after which the National Antbem, "God Save the King," was sung by the audience, who afterwards dispersed to their respective homes thoroughly satisfied with the concert and social that had been provided for them.

A Yorkshire Lad Tells us All About It.

"Ow, there, ware wat ter last night? I didn't see thee at Lion."

"No'a, I wer at amalga 'ted meeting- and I expected seeing thee there."

"Ah well, I knew, but tha sees I hed a touch of flue, so I wer disappointed. Ah did yer go on?"

"O, champion. Ther wer a grand muster of fanciers, thro' all parts; and tha talks abart guid spirits, why there were ony amount except Irish and Scotch. Iverybody seemed to want to luv one, or any other or somebody else, and tha knaws it is almost al'ys soar when Sunderland's it chair, because his varry face seams to cause good feelin in iverybody, and som 'ah be seems to get attention wen iverybody wants to be boss. So'ah tha my knaw things wer well conducted, and ther wo Ramsden, colour-feed king and champion giver of prizes on platform, and Carl, our CAGE BIRDS publisher.

"Eh, lad, but tha should have seen Carl's face when meeting war in full goa. He seamed fair capp'd; he didn't know weather to laugh, sbart, or roar, he seemed so pleased. But I see he wer fair filled up we pleasure, wen be saw such good feeling among so many fanciers. He seams a guid sort, does Carl, but I will say more when 'ave known him a bit longer. Tha see's, I'm only a novice.

"Then Ramsden wer there. Wy, man, his face reads like a clock almanac, it's full of fun and kind heartedness, and when be promised to repeat tbo good gifts next year—and more, to please t' ladys, because he liked 'em—tha can bet he did bring down house. I thout ceiling wer barn to drop beforc cheering were dun.

"And Harry Battye wer on platform, and tha know wat Harry is wen he get agait a talking. Why, he draws iverybody to him becaus they knaw it's Yorkshire, altho' he's Norwich bilt hisself. He knaws a Yorkie when it's a guid 'un, and ho gav prizes for Y.U., and, my word, they wer grand 'uns. Am sure I felt a bit disappointed I didn't get mine this yer, but wen I saw faces of them at get 'em, wy I felt as pleased as tbo' it wer mysen. Harry reckons he can't talk—well, I am a bit of a liar mysen, sou tha can judge. Anyhow, be wer up to th' mark.

"Then Jack Greaves had a turn. Jack should feel very praud, for be holds two offices. He's secretary for Y.C.C., and president of Cinnamon M.Y.C.C. He's like a dog we two tails, he doesn't knoo which to wag first. But be did first rate considering he'd just getting over that blooming flue. He did show hu grand C.M.Y.C.C.'s position war, and ab cheap it war to be a member, only 1s. 6d. a year. Na, lads, luck sharp and join'.

"Cowgill performed dutys of British Bird and Muil Club, and tha knaws ha Bill can talk when be gets agait. He's like a gronfatber's clock wun up. But at same time he talks wc a bit of sense, and if a officer iver fought for his society, he did. Imagine, it's only a bob a year to be a member, and t' grand assortment a prizes that war given made me mauth watter; but tha secs am only a novice.

"I heven't sed much abaught Y.C.C. prizes, as they fair capped lot, and I were so up a winning they fair capped lot, and I were so up a winning one mysen, as I bed sbown in a few sbows. I bed only abaught five au six to draw, but am hoping next year to do better, and I feel pround that I hev two years' sub in hand although only a novice. But me mauth watered when I saw such grand prizes given to the winners be Mr. Sunderland, and all eyes brigbtened wen they gat em, except Jimmy Bailey's who thought more of fifteen bob be bed to draw than missing 20 guinea cup. Never mind, Jimmy, if tha lives long enough tha'l be top dog yet, and then we sball beve cup filled reight up tut top we rum punch. Speaking of punch, some few wur disappointed ther war noan, but am glad ther warn't, as everybody seemed to hev such good spirits thersens, that rum punch mixed might hev spoiled 'em.

"Then we hed a concert; a chap called Leach thumped plano, and he stuck to it like a leach; be war very good, and no offside abaught bim. And we hed a duet called "Tbe Battle Eve," sung by two right good Yorkshire voices; tbey call'd 'em Wright and Ackroyd, and am sure I felt as if I hed just got home from Boar War (am mebby thinking of 'Boar's Head'). Anyhow they sung up tet mark. We hed a comic singer named Smith. It's a vary arrycrastic name is Smith—I believe Noah hed one to mak ark. Any how, that's history, and I could hev believed it hed there been a bit more of aur Smith; biggist part abaught him war his comicality, and am sure som of aur company had belly-ache before he'd got tbrough his job.

"Mixed among all the songs, duetts, etc., we hed a few words from the receivers of the prizes. I tell tha what, if I hed a gotton one mysen I shouldn't have spoken; I should hev shouted. I felt inclined to do so when sum on 'em gate a graud prize and simply bobbed tu chairman and forgat plate! Tha knaws I wer thinking of punch. So don't forget when 't annual meeting comes off, chaps. Then we hed a chap fro top of Queensbury called Stafford. He sung a song called "Eilleen Alannah." Arm noun barn to say su mich abaught his looks; I thought it war Wilson Barrett resurrected at first, and I shut my een. To hear him say, "Now, go," in that voice, made my backbone ache, but while my een wer shut, I beard a angel whisper—and I kept me eyes shut so tbat I might not get a disappointment, but 'Eilleen Asthore' went down to the bottom of my heart, and I hed to blaw my nose and reckon to koff, and I just saw Sunderland wiping a drop of lager beer off bis eyelids. Ye know Sunderland's a good singer when bo like to let hissen goin.

Tben we bed vote of tbanks tu 't donors of prizes, and it war very unfortunate that Mr. Brotherton hed been called aught of town, because be'd given a lot of prizes tut different clubs. Fred. Hammond moved the motion, and didn't forget to mak a reight grand speech. It's a pity Fred's giving np secrctaryship for Y.U. He owt to be a M.P. or taun carnciller. He gave C.B.U. what for in a gentlemanly manner. Dick Garnet seconded and it was carried, you bet. Chairman called upon Mr. Ramsden to respond. Well, Ramsden's heart's abaught as big as his body. He promised more than iver, and you can bett all your young stock that Ramsden 'en fill up his promise to the full when bis word's gone. So I am hoping to win a prize of bis mysen. I sball be glad to receive a miniature goblet for advertising him, so send it on, J. W. R., care of CAGE BIRDS. W. H. Shackleton spoke, Ogden Bros., and Towers, and then come a vote of tbanks to artistes, committee, etc., which were carried, and a votc for chairman moved by Bob Sutcliffe, and seconded by Joe Wilcock, supported by Mr. Carl, of CAGE BIRDS Tha knaws when Bob Sutcliffe speaks it means summit weighty, and when ahr Joe seconded, it was putting balance dawu we a thump, because these arc two straight bottown chaps, and al'ays calls a spade a spade. And Mr. Carl supported it in such a manner as we hope all supporters will follow. Imagine, lad, what bis barn to do—he's barn to give a special prize to such as can win it to all except the big guns it fancy. I don't know how, yet, but it will be announced in Fanciers' paper soon. When the motion had been carried we musical honors, that wer so long, strong, and loud that Mr. Mitchell (that's landlord) hed to come up to see if electric lights hadn't busted. The chairman replyd, and hed good sense to say little except to praiso his wife (who is a better fancier than his sen), and if we all looked at home we should be able, or owt to do, to praze our womem folk for their help more than we do. Come on, lad, I've talked mysen dry, and, sither, there's Pa Mundell across t' road—let's joiu him in a pint.—YELLOW TICKED.

NORWICH PLAINHEAD CLUB.

Annual Election.

Result of the election of officers for the above club for the coming season: President, Mr. J. A. Eckerlsey 36 votes; vice-presidents, Messrs. Besson 87, Aitcheson 31, A. G. Davis 23, J. H. Payne 22; committee, Messrs. S. Cook 53, J. Trengove 44, W. Booth 40, T. H. Dent 35, J. Haynurst 35, J. Towers 33, J. H. Roe 32, W. Skillman 31, W. Vardy 30 R. Clegg 26, F. W. Heaton 23, O. Stringer 21; judges, Messrs. J. H. Roe 57, W. Vardy 67, J. Trengove 51, J. Benson 45, H. W. Battye 42, J. C. Barnes 37, A. Wellings 35, J. Robson 33, J. H. Payne 33, A. G. Davis 31; auditors, B. Clegg 52, G. W. F. Lythgoe 48; hon. sec. and treasurer, J. Raynes, 9, Richmond-road, Chorlton-Cum-Hardy, Manchester. 67 papers were sent in.—J. RAYNES, Hon. Sec.

IN THE COURTS.

WHERE IS THE PARROT?

Five Years' Penal Servitude.

At Hereford Assizes William Boddington (54), gardener, Worcester, was, according to the report in a local paper, indicted for stealing by means of falsc pretences a postal order for 15s. from Henry Dix, jeweller, 562, Manchester Road, Bradford, at Hereford, on January 5th. He was also indicted for obtaining by false pretences P.O. orders to the value of 20s. and 13s. respectively, from John Capstick, at Hereford, on January 8th. In the first case, complainant said he inserted an advertisement in the "Exchange and Mart" for a Parrot. On the 14th of January witness received a letter from prisoner stating that he had a Parrot for sale. It was an African grey bird, and a good talker, and he was willing to sell it for £2. He offered to send it on approval, and said he was a well-known business man at Hereford, and on receipt of that letter witness sent prisoner the P.O. for 15s., now produced. Prisoner wrote acknowledging the P.O., and promising to forward the bird. The Parrot, however, never arrived, and witness had not heard from prisoner since. A letter witness posted him was returned through the dead letter office, and upon that witness communicated with the Hereford City Police.—In reply to the Judge, witness said that prisoner's letters looked "that sweet" —(laughter)—that he could not help sending the money.—Prisoner was found guilty, and sentenced to five years' penal servitude.

Kindly thank all who replied to my advertisement of Zebrafinches in CAGE BIRDS last week, writes Miss M. Gibbons (Boddington Manor), as I sold all the birds I had for disposal by Saturday, and the enquiries were too numerous to answer.

THE SHOWS.

(See also page 264.)

WEST LONDON F.A.

We held our annual pair show on Feb. 29, at the Bush Hotel, Shepherd's Bush. There were 83 cages and 151 birds. The show was a complete success.

CHAMP. NOR.: 1, 2, hc, c, Cooper Bros.; 3, vhc, Leithbridge. CREST AND C.B.: 1, 3, hc, Turner; 2, vhc, Lazarus; c, Gibbons. YORKS.: 1, hc, c, Bennett; 2, 3, vhc, Easterling. AMATEUR NOR.: 1, 2, 3, vhc, hc, c, Lack. CREST AND C.B.: 1, 2, 3, vhc, Franz. CLASS 9: 1, 3, vhc, Knight; 2, hc, c, Churchard. NOVICE, CREST AND C.B.: 1, Dr. R. Thompson. CLASS 11, YORKS.: 1, 2, 3, Trussler. HYB. BRIT. AND CAN: 1, Lack; 2, Cooper Bros.; 3, Dewhurst. HYB., TWO BRIT.: 1, 2, vhc, Lack; 2, Bray; vbc, c, Dewhurst. BRIT.: 1, 3, Dewhurst; 2, Cadic; vhc, Bray; hc, c, Lewis. BRIT.: 1 ,2, 3, vhc, hc, Dewhurst; 2, Lewis.—J. DEWHURST, Sec.

DEWSBURY AND DIS. C.B.S.

The third members' show was held in the Royal Hotel on February 29. Mr. J. Wilman judged, and gave every satisfaction.

CLEAR, ETC., YELL.: 1, Blackburn; 2, Raynes; 3, Fawcett. BUFF: 1, Rayner; 2, Blackburn; 3, Pollord; vhc, Charlesworth; hc, Senior. UNEVENLY MKD. YELL.: 1, Cook; 2, Yelland; 3, Stafford; vhc, Senior; hc, Cook and Son; c, Fawcett. YELL. HEN: 1, Pollord. BUFF: 1, Cook; 2, Cook and Sou; 3, Senior; vhc, Charlesworth; hc, Clennett; c, Yelland. UNEVENLY MKD. YELL. HEN: 1, 2, Hall; 3, Clennett; vhc, Blackburn; bc, Taylor; c, Pollord. BUFF: 1, hc, c, Blackburn; 2, Hall; 3, Fawcett; vhc, Charlesworth. SELL.: 1, 2, 3, Taylor; vhc, Fawcett; bc, Charlesworth; c, Howarth. SELL.: 1, Charlesworth; 2, Hall; 3, Rayner; vhc, Cook and Son; hc, Cook; c, Howarth. Winner of gold medal (or anything of £1 1s.), W. T. Hall, 37 points; novice section, W. Cook, 37 points; silver (10s. 6d.), novice, S. Taylor, 32 points.—B. COOK.

WIMBLEDON C.B.S.

The usual monthly meeting was held at Mr. Johnston's Rooms, 6, The Broadway, on Mar. 2. Mr. W. H. Stoakley in the chair. There was an exceptionally good attendance, including several ladies. One new member was elected, and there were no fewer than 14 nominations for membership—a record for the society. The new secretary, Mr. H. Smith, read several letters, including one from Mr. Chaplin, M.P. The Secretary reported that, at the last committee meeting it was decided that the rules of the new society for the proposed Federation of London Societies should be discussed at the April meeting; that, owing to the breeding season just coming on, no more judging competitions should be held for the present; and that members should be invited to send questions to the secretary, which are to be drawn for at the next meeting, and answered impromptu by the members who draw them. A pair show was also held, and was well supported. There were 38 entries, 10 more than last year, and the two classes for Yorkshires, in which were 11 and 17 entries respectively, were exceptionally good. Mr. J. Robson judged.

NOR. (Champion) : 1, 2, Day; 3, vhc, Rorke. YORKS.: 1, Smith; 2, c, Carson; 3, hc, Warley; vhc, Rorke. NOR. (Amateur and Novice): 1, 2, Tutty; 3, hc, Mrs. Collins; vhc, Porter; c, Mrs. Piper. YORKS.: 1, McLaughlin; 2, bc, Found; 3, vhc, c, Whittome. Medal for best pair in show, given by the society, was won by Mr. H. Smith. After the judging, Mr. Robson explained where the pairs were well and ill asserted, and his reasons for giving the awards as he had, after which the Chairman thanked the judge.—H. SMITH.

CARDIFF AND DIS. C.B.S.

The members held their annual show on Feb. 26th. The entries were not quite so numerous as on some previous occasions, but the quality was grand, many well known birds being staged. The Yorkshire pair class was a good one, the winners being birds of much merit and all well staged. It would be superfluous to say that the hon. sec., Mr. W. Sampson, had everything in first-class order, for those who know him and his quiet methodical, yet thorough, manner of conducting a show would expect nothing else. He was well supported by a few willing workers, who did all in their power to make the show a success. Mr. J. H. Payne made the awards.

NOR. YELL. CK. (5): 1, Tedstone, well known, four-pointed, looking fresh as paint; 2, Gardner, ticked on head, nice shape and colour, neat wings and tail; 3, Bradford, unflighted, nice shape and colour; 4, Dummett, ticked on head, nice feather and quality; vhc, Harrington. BUFF (5): 1, Tedstone, head neck and wing marked, magnificent colour and quality, nice flights and tail, grand back, and shape, smooth as a glass bottle; 2, Gardner, nice shape and quality, well rounded chest and nicely packed wings; 3, Jones, unflighted, marked wings and neck, grand feather, nice shape, full neck; 4, vhc, Bradford. FINCH, ETC. (1): 1, Nicholas, Yellow Bunting, beautiful colour and feather, grand markings, in fine order. A.O.S. BRIT. SMALL (2): 1, Ford, grand Swallow, perfect fork, very steady, grand colour and condition; 2, Sampson, nice feathered, very steady Wheatear. LARGE (1): 1, Thorne, nicely spangled, good coloured and lustrous Starling. SELL. (20/-) (4): 1, 4, Penny; 2, 3, Flynn. (10/-) (1): 2, Jones.

COVENTRY GODIVA C.B.S.

The first members' show was held on Feb. 29th, at headquarters, the Chequer's Hotel, Little Park-street. There was a good muster of entries and some very fine specimens of Canaries and British birds were shown. Mr. J. Corrall officiated as judge, and the awards were very well received, the show was managed by Mr. J. Blackshaw, show manager, J. Busby, President, R. Symonds, Vice-President, and W. H. Bray, hon. sec.

PLAINHEAD MATCHED FOR BREEDING (23): 1, 2, 3, Symonds and Son, with two pairs of Nor and a pair of Yorks, all in good condition and colour; 4, vhc, Busby, another fine pair of Nor.; res., Bent, grand pair of Nor.; hc, Houlden; c, Cooke. PAIRS FOR MULE BREEDING (7) : 1, Symonds and Son, Goldfiuch-Canary; 2, hc, Wright, Greenic - Canary ; 3, Ward, Skin - Canary ; vhc, Busby, Goldie-Canary; c, Bray. Redpoll-Canary. PAIRS MATCHED FOR HYBRID BREEDING: 1, Symonds and Son, Goldfinch-Bullfinch; 2, hc c, Cooke, Redpoll-Bullfinch ; 3, J. Bray, Greenfinch-Bullfinch; vhc, Fitzhugh, Bramble-Chaffinch BRIT.: 1, Busby, grand Goldfinch; 2, Wright, Greenfinch, in splendid condition; 3, c, J. Bray, Goldfinch; vhc, hc, W. H. Bray, Linnet and Greenfinch respectively. A.O.S. BRIT.: 1, 2, W. H. Bray, Reedhunting and Robin, respectively, both in good condition: 3, Bent, Blackbird, looks well; vhc, Symonds and Son, good Hawfinch. SELL.: 1, Ward; 2, hc, Symonds and Son; 3, Wright; vhc, Blackshaw; c, Busby.—W. H. BRAY, Hon. Sec.

DULWICH O.S.

The first show of pairs matched for breeding took place at headquarters, The Herne, Forest Hill Road, Peckham Rye, on February 27. There was a grand collection of thirty-six pairs, and considering that this was the first venture of a Society only a few weeks old it augurs well. Both in Norwich and Yorkshires the competition was exceedingly keen, and it was very gratifying to the pioneers of this young Society to see the high-class quality, especially in the novice section, many of the exhibits being fit for competition in the premier section. Special for best pair in show was secured by Mr. G. F. Woolhouse, with a clinking pair of Norwich, although Mr. F. W. Mabey ran him very closely with a very fine pair of Yorkshires. The former also won special for best in champion section. Messrs. Rogers and Mazzoni won special for best pair in novice section with a grand pair of Norwich. Mr. Wall won gold medal for most entries, and also silver medal for best pair matched for Hybrid breeding, with a smart Goldie and Canary. Mr. Geo. Gardner placed the awards, and gave entire satisfaction. At the conclusion a judging competition took place amongst the members, bringing to a close a most interesting and enjoyable evening. Mr. Wall secured first and special in the judging competition, and Mr. Wilmot was a good second. There was a splendid attendance of well-known fanciers.

CHAMPION SECTION NOR. (8): 1, 2, 3, vhc, hc, c, Woolhouse. YORKS (8): 1, 2, Mabey; 3, vhc, hc, and c, Wall. NOVICE SECTION NOR. (11): 1, 2, Rogers and Mazzoni; 3, hc, c, Forster; vhc, Kates. YORKS (4): 1, 2, 3, vhc, Warley. A.O.V.: 1, Bisley. MULING PAIRS: 1, Wall; 2, Bisley; 3, Fletcher; vhc, Butt.

The following gentlemen were elected members:—Councillor Alwin (Peckham Rye), Messrs. A. Rouse and G. Peters (Camberwell), Perkins (Thornton Heath), Daniels (Harringay), Honeysett (Clapham), W. Brooks and R. J Wall (Brixton), and G. Sell (Peckham). Mr. W. Brooks was added to the committee.—ROGERS AND MAZZONI, Hon. Secs.

GLASGOW & WEST OF SCOTAND N.M.B. AND F.B.C.

The annual show of pairs was held on February 25th in the Good Templars' Hall, Ingram-street, Glasgow. There was a good turn-out all round, and a special feature was the number of Yorkshires, there being 15 pairs staged, which, it is thought, is a record for any Scottish club. Quality, too, was very good. This should be some encouragement to the new Scottish Yorkshire Club, which has just started. Norwich were also strong in numbers and quality. The birds were staged in No. 2 room, and the judging started at eight o'clock, while the members adjourned to an adjoining room and transacted the usual routine business. A very pleasant meeting terminated with the admission of twelve new members, and the indefatigable secretary, Mr. R. A. Brown, intimated that Mr. John L. Burnett, the well-known hybrid breeder, had agreed to give a lecture on "Mules and Hybrids," on March 10th. Mr. P. Easton, who judged the Canary classes, had plenty to do. Mr. J. L. Burnett, of Govan, judged all other classes. Both seemed to give entire satisfaction.

NOR. PLAINHEADS (24): 1, spl, Tannoch, splendid bold Buff cock, good chest and neck, a topper, yellow hen, good feather and wings, nice head; 2, Gow, buff cock and yellow hen, well matched; 3, Gowans, good bold pair; 4, vhc, Ferguson; hc, T. Erskine; c, Crawford. Many good pairs out of tickets. CREST OR C.B. (9): 1, 5, Stewart, Crest cock and C.B. hen, splendid pair; 2, spl, 3, 4, McPhail; hc, c, Crawford. BORDERS (12): 1, spl, 2, 3, hc, spl, Whitelaw, three champion pairs, 1st and 2nd outstanding; 4, vhc, c, Glen, nice pairs. YORKS. OR LANCS. (16): 1, Crawford, grand yellow cock and buff, should produce toppers; 2, Martin, buff cock, yellow hen, another good couple; 3, Gibb, yellow variegated hen, buff cock; 4, Boman, buff cock, yellow ben; vhc, c, Macdonald; hc, Penman. A.O.V. CAN. PAIRS (1): 1, spl, Fyfe, grand pair of cinnamons. MULES (12): 1, Taylor, fine C.B. cock and Bullfinch hen, both in good condition; 2, Tannoch, good yell. hen and a nice-sized British Goldfinch, grand face and steady; 3, 5, Graham, Twite, splendid size and colour, and yell. Norwich hen; 4, Fyfe, cinn. hen and cock Greenfinch; 6, Crawford; 7, T. Erskine. BULLFINCH HYB. (12): 1, Hendry, champion hen Bullie, in first-class condition, and cock Redpoll; 2, Craig, cock Twite, good size, colour, and lacing, nice hen Bullfinch; 3, Gow, hot-fed cock Greenfinch and hen Bullie; 4, George, nice cock Siskin and hen Bullie; 5, McCallum; 7, Tannock. A.O.V. HYB. (11): 1, 6, Craig, 1st grand-sized cock Siskin and Siberian hen Goldfinch, one of the biggest seen; 2, Watt, Siberian cock Goldfinch, grand-sized blaze and large hen Greenfinch; 3, M. Erskine, British cock Goldfinch, lovely blaze and cheeks, grand size, and hen Siskin, well laced; 4, McCallum, cock Siskin, hen Greenfinch; 5, Gow; 7, T. Erskine.

LEICESTER C.B.S.

Annual show of pairs matched for breeding was held recently, and proved most successful. Messrs. A. H. Jones and T. H. Ride judged, and appeared to give satisfaction.—YELL. COCK and BUFF HEN (10): 1, Stevens, clear cock and a very nice var. Buff hen, A1, competition very keen; 2, Heighton, very fine hen; 3, Tyler, clear cock, nicely shown, good head, mated with a nice chubby ben; vhc, Smith and Edwards, another nice pair; hc, Claypole; c, Tyler. BUFF COCK, YELL. HEN (9): 1, 2, c, Tyler; 1st, nicely matched pair, 2nd, a very fine Buff cock, A1, hen on the small side, c, another good pair, hen very fine yellow; 3, Stevens, clear Buff cock, grand type, mated with a nice yellow hen; vhc, Claypole, green Buff cock, very fine feather; hc, Smith and Edwards, nicely matched pair. A.O.V. CAN. (3): 1, Tyler, cock a clear Buff, C.B., mated to a very nice clear body dark-crested hen. HYBRID PAIRS (11): 1, 3, Hunt, 1st a very fine Greenfinch cock, bully hen, 3rd another very fine pair, Chaffinch cock and Bramble hen; 2, Seal, good Goldfinch mated to a very fine Siskin hen, one of the best; vhc, Collius, Goldfinch cock and Siskin hen; hc, Heighton, Redpoll cock and hen Goldfinch; c ,Stevens, Greenfinch cock and Bully hen. GOLDFINCH and CANARY (4): 1, Tyler, Goldy cock mated to a fine yellow hen; 2, Stevens, good Goldfinch and yellow hen; 3, Laurence, a Russian Finch mated to a Buff green hen. LINNET, ETC (4): 1, Tyler, fine Linnet mated to a grand yellow hen; 2, Hunt; mealy Redpoll mated to another very fine yellow hen; 3, Stevens, good stamp Linnet mated to a rather slim Cinnamon hen; vhc, Harrison, Redpoll cock and hen. A.O.V. WILD BIRD AND CAN. (4): 1, 3, Heighton, 1st nice Siskin with a good yellow hen, 3rd Greenfinch and yellow hen; 2, Hunt, Nor. yellow cock and hen Bullie, a grand pair. NOVICE YELL. COCK AND BUFF HEN (9): 1, Warren, fine cock mated to nice chubby Buff hen; 2, Collins, cock rather thin, a very fine hen, A1 quality; 3, Heighton, variegated pair, good body; vhc, hc, Harrison; c, Lemon. BUFF COCK AND YELL. HEN (9): 1, Warren, very nice pair clear birds on the small side; 2, Harrison, another nice pair; 3, Dyson, same remark applies; vhc, c, Lemon; hc, Heighton. A.O.V. CAN. (3): 1, 3, Freer, Yorkshires, 1st a nice clear yellow cock mated with a good Cinnamon marked hen, 3rd good looking pair; 2, Dyson, nice pair of Borders.

The following are the results of table shows held in February:—Feb. 12: MATCHED PAIR NOR. (19 pairs): 1, 2, ex. 3, Stevens; 3, Claypole; vhc, Tyler; hc, West; c, Seal. DITTO NOVICE (8 pairs): 1, 2, Warren; 3, Wood; vhc, hc, Lemon; c, Lowe. Judge, Mr. Needham. Feb. 26: BUFF HEN (18): 1, Heighton; 2, 3, and vhc, Stevens; hc, Lawrence; c, Claypole. OPEN A.V. NOR., NAT. COL.: 1, 2, 3, Tyler; vhc, Hartshorn; hc, Stevens; c, West. NOVICE. NAT. COL. (4): 1, Dent; 2, 3, Warren; vhc, Dyson. Judge, Mr. E. Noakes.—J. A. TYLER, Sec.

CLUB REPORTS.

(See also page 264.)

HUDDERSFIELD O.S.

On March 2 the members met to hear a paper by Mr. E. Wear on "Canary Breeding." Mr. Wear dealt with the subject in a very lucid manner, and a very instructive and interesting evening was enjoyed by all present. A hearty discussion ensued, and though all did not agree with the lecturer in his views, great credit is due to Mr. Wear for his very able paper. The usual vote of thanks brought the meeting to a close.—S. LODGE, Sec.

WEST BROMWICH & DIS. C.B.S.

The society held a matched pairs show on Feb. 25th at the Dartmouth Hotel, which turned out a splendid success. About 27 pairs were staged. Mr. Paddock (Birmingham) acted as judge for the Yorkshires and Mr. Broadhurst for the other classes. After the judging, Mr. Paddock gave us a lecture on Yorkshires, which everyone present enjoyed. One of the most pleasant and instructive evenings was brought to a close by a hearty vote of thanks being accorded to both Messrs. Paddock and Broadhurst.—T. DUFFIELD Hon. Sec.

SCOTTISH NORWICH PLAINHEAD CLUB.

The annual general meeting was held at Nelson's Hotel, Ingram Street, Glasgow, on February 22, with the President, Mr. J. Ferguson (Glasgow) in the chair. The minutes of the general and committee meetings held during the year were read and passed. The financial statement, after a few explanations, was adopted on the motion of Messrs. Calderwood and J. McKay. Exception was taken by several members at the short notice and time given between the issue and return of voting papers. The Secretary explained that the delay in the issue was caused by the printer. The result of the vote was then read by Mr. J. Young (Rutherglen), scrutineer. The Secretary then made allusion to the correspondence that had appeared in CAGE BIRDS between Mr. Aitchison and himself, a long and heated argument following between the two. The winners of Club medals for the year 1907 were announced as follows:—City of Glasgow, Messrs. R. Young and W. Watson; Dysart, A. Chalmers; Perth, A. McFarlane; Dundee, J. Howie and G. Davidson; Brechin, G. Stevens; Aberdeen, A. Forrest; Kilmarnock, A. Sloan; Scottish National, G. Scaife. Gold medal for most points throughout the season was gained by Mr. W. G. Muir (Kilmarnock). There being a tie between Messrs. Ferguson, Ireland, and Holmes for gold medal for most points in unflighted cocks, it was left with Mr. Ferguson to come to an arrangement with the other two members. Letters were then read which had passed between Mr. Howie (Dundee) and the Secretary referring to a charge made by the secretary against Mr. Howie of having shown birds which did not belong to him, and counting the points gained by these birds for cup competition. It was unanimously agreed that this matter be remitted to the new committee for decision, Mr. Ferguson to convene the meeting, and to summon Mr. J. Howie and Mr. J. Fraser (Kirriemuir) to attend. The Secretary intimated his retirement from office, and from the membership of the club, and his decision could not be altered, although pressed by the meeting. It was eventually decided to send out new voting papers to all members, Messrs. J. Brown (Glasgow), F. Bowman (Glasgow), and S. Buglars being nominated by the meeting for the position, members being invited to vote upon these three. A notice of motion was tabled by Mr. McAuley (Rutherglen), the meeting then closing with votes of thanks to the retiring secretary and president.—JAS. WINTER, Secretary, pro. tem.

A meeting of committee was held at rooms, 142, High Street, Edinburgh, on March 7, Mr. J. Ferguson (President) in the chair. Mr. Ferguson (convenor) stated the purpose for which the meeting was called, viz., to consider all evidence in the Howie case, and to come to a decision if possible. Also to elect a President, five vice-presidents, and two scrutineers. In the absence of a secretary, Mr. J. Winter consented to take a record of the proceedings. The minutes of the general meeting having been read and approved of, the evidence in the Howie case was gone into, and after an hour's deliberations the following resolution was put to the meeting:—"That Mr. Howie (Dundee) be disqualified from participation in the Sandiford Cup contest, and, further, that he be suspended from the Club membership for one year." This resolution was unanimously carried. The election of a President was the next item, Mr. J. Winter (Edinburgh) being unanimously elected to that office, on the motion of Messrs. J. McLay and J. Young. The following gentlemen were then unanimously elected vice-presidents:—A. Chalmers (Kirkintilloch), J. Hector (Aberdeen), W. Watson (Kilmarnock), A. G. Cameron (Kelso), and J. Ferguson (Glasgow). Messrs. Allan Roberts (Thomliebank) and Chas. Campbell (Glasgow) were also unanimously elected to act as scrutineers. Mr. Winter was then pressed to take over the secretary's duties until one could be appointed, and after some hesitation, he agreed to do so. After a few motions had been tabled the meeting closed with a vote of thanks to the chairman. The voting papers for secretary are to be sent out to all members as early as possible.—JAS. WINTER, Secretary, pro. tem.

QUEEN'S PARK AND DIS. C.B.A

At the meeting on February 20, Mr. J. Robson gave a very intcresting and instructive lecture, the subject being "Breeding and Exhibiting." His remarks were chiefly addressed to the young fanciers, this Society having a good sprinkling, twelve novices having joined during this season. A good muster of old and young members was present, and much enjoyed the lecture. A number of questions were put and answered. A very pleasant evening was brought to a close by a hearty vote of thanks to the lecturer.—J. C. BIRCH, Hon. Scc.

HEYWOOD AND DIS. C.B.S.

In connection with the usual monthly meeting held at the Central Dining Rooms, on February 25, a table show of pairs was held. Mr. J. W. Howarth judged, his awards being as follows:—1, Meadowcroft; 2, Schofield; 3, Mayes; 4, Booth. After judging, Mr. Howarth gave his reasons for his placing of the pairs. Several questions were asked as to the pairing up of birds, and ably answered by Mr. Howarth. The members then sat down to supper, presided over by the President, Mr. James Perry. A very pleasant evening was brought to a close with a vote of thanks to Mr. Howarth for judging.—A. H. MEADOWCROFT, Sec.

Add Singing Contests.

COCKERMOUTH F.S.

The annual meeting was held in Tolson's Rooms, Cockermouth, on Feb. 21st, Mr. Oglethorpe in the chair. The discussion of the balance sheet was held over until another meeting, several subscriptions being still unpaid. There is, however, a substantial balance in favour of the society. A committee of 24 was appointed, including 18 old members, with Mr. Oglethorpe as chairman; Mr. A. Rea, Vice-chairman; and Mr. J. Simon, Mays Street, Cockermouth, as secretary. Votes of thanks were accorded to the chairman and to Mr. Graham for services rendered. It was decided to hold the next show on Dec. 4th and 5th, to join the C.B.U. and the National P.C., and to hold a social evening at an early date.—GEO. OGLETHORPE, Chairman.

MORRISTON AND DIS. C.B.S.

A general meeting was held at the Woodfield Coffee Tavern on February 22, this being the final meeting of the year's working of the Society. The secretary's books were audited and found correct by Messrs. Henry Lewis, D. M. Powell, and W. H. Wilcox. The Chairman (Mr. D. M. Powell) said they had cause to be juhilant over the fact that their late show was a most successful one, due to the energies of the members and secretary, the latter having sacrificed a great deal of valuable time in bringing the same to a successful issue. It was gratifying to know there was a turn-over of upwards of £18. It was a source of pleasure to everyone to know that this amount of cash in hand was the result of one year's working, and that their late show was their first venture. We beg to thank all subscribers for their kind financial assistance. We wish also to thank those who assisted us otherwise. The following were elected officers for the ensuing year:—Chairman and vice-chairman, Messrs. D. M. Powell and Henry Lewis; secretary and assistant secretary, Messrs. David Jeremy and Albert C. East; treasurer, M. Thos. Topkins; auditors, Messrs. W. Powell and A. E. Taylor; committee, Messrs. Harding, Williams, W. R. Morgan, W. H. Lewis, P. J. Rees, D. Jonkins, E. M. Evans, W. H. Wilcox, George Phillips, Robert Stamp, G. Poulet, David Lewis, and W. S. Kirby. It was deemed advisble to deposit the moneys of the Society in the bank, for which Messrs. D. M. Powell, Thos. Hopkins, and D. Jeremy were elected trustees. It was also decided that we retain our show date, viz., November 19. The Chairman, in a few complimentary remarks, said he was glad to see the energy and enthusiasm of the secretary in the performance of his official duties for the past year, and it was their duty to recognise his services in a practical way. All the members present concurred in that opinion, and it was unanimously decided to present the secretary with a writing desk to the value of £2, as a token of estimation and respect. On Saturday evening next, February 29, a cold luncheon will take place at headquarters to commemorate our successful show. All fanciers are cordially invited to attend, application to be made of Mr. Albert C. East, assistant secretary, Part Lane Studio, Clydu, Morriston. Members and non-members will be charged 1s. for same.—D. JEREMY, Secretary.

The Novices' Notebook.

This page will consist of topical hints, addressed chiefly to beginners, concerning every branch of the hobby of bird-keeping, and the notes will be contributed from time to time by various leading experts.

(Continued from page 244).

A Word on Moist Fodo.

Having used the term moist-food just now, it may be advisable to digress here for a moment to point out what is meant by the term. It does not mean a food saturated with water, or reduced to a pasty mess, much less a sloppy mess. Such a degree of moisture as will not release any perceptible moisture on to the fingers when handled is all that is desired, or with just a slight sense of dampness to the touch, yet, to all appearances, dry. The inner part of a loaf of bread one day old may be taken as a convenient type of what is required. When making the egg-food with fresh eggs, no additional moisture to what is contained naturally in the substance of the eggs is necessary to bring the prepared food ready for use to the proper degree of moisture. Most novices err on the side of making the food too moist, which, besides, being less palatable to the birds, has the very serious disadvantage that in a wet condition it forms a far more suitable cultivating medium for the germs of septic fever than in the case when it is used in a more dry state.

Nesting Sites.

Besides the natural bushes with their basket nests, as already suggested, a shelf might be placed across the back opposite the window, and another across the end opposite the door on which might be placed a nest-box here and there, and an occasional piece of cuttlefish laid about them. The nesting material should be suspended on the walls in a couple of fairly small mesh netting pockets—the smallest mesh netting sold for the purpose of making clap-nets or net bird traps would do very nicely—and in one of these cow-hair should be kept, and a mixture of moss and short soft hay in the other.

Many little points will occur to the ingenious fancier, whilst carrying out these instructions, by means of which a little privacy may be secured for the nest-boxes on the shelves, and in other ways, which he may carry out with advantage. But do not be tempted to construct any elaborate or superfluous furnishings of any kind. Remember that every extra fitting or ornament may ultimately form an additional source of worry and anxiety, by becoming another harbour for insect pests and disease germs. It may be thought that these foes will not, or should not, find a place in a comparatively free stock, as this would be. That they will not with even ordinary care become very serious drawbacks may be quite true, but it would be a suicidal policy for anyone to rest on his oars, so to speak, and think that he and his stock are immune from such attacks, or someday he will probably have a very rude awakening. In a greater or less degree birds kept under all conditions are susceptible: therefore, it is the only wise policy to always bear in mind the possibility of their attacks.

More Aviary Notes.

It was not our intention to labour the subject of aviaries any further, but a certain amount of interest has been shown in the case in point (of an outdoor shed being converted into an aviary), and a further question has come to hand from the original querist, whose case suggested our first notes, for further information on such points as adding a wire flight in the open, what other purposes the aviary might be utilised for besides the original one of breeding Canaries flying loose, and others which load us to make more hints and suggestions based upon the same case which might be helpful to many more readers.

A Wire Flight.

To fully comprehend these final notes it may be most advisable for the interested reader to go back to the beginning and refer to the previous notes in the last two issues, as all our references now will be based upon the structure just as we left it in our former notes. It will be seen that the front of the aviary, as we left it, had a large window, almost half the depth from the front from the eaves to the ground, and something like two-thirds of the whole length. This was protected with wire-netting on both sides.

Now, in building a wire flight I should select the whole length of the shed front as the site for it, and, of course, run it out from the shed as far as space or inclination would allow, so as to keep the wall, which, it will be remembered, exists on the right side of the structure, as the back of the wire flight, whereon a few nesting or sleeping boxes might be hung. Before making any other move the ground should be levelled and a floor constructed of concrete, with a layer of glass chips underneath, the same as was advised for the covered portion. Be careful to finish it off with a slight incline in the best direction to quickly drain off wet or rain. Next the whole length of top of the wall should have a layer of concrete, if any is left; otherwise a little ordinary mortar will do as well, laid along it. Whilst it is soft stud it thickly all over with rather larger pieces of broken glass and crockery, with the jagged points sticking upwards. This is to make the wall an undesirable promenade for prowling cats, and if a loose flap of netting is arranged on the inside from the top of the wall to incline at a right angle, and fixed so that it is loose and wobbly when any little weight is put upon it from the side next the wall, the aviary will be pretty safe from feline poachers, as, wary as the cat is, it will not trust itself upon a wobbly contrivance of this kind. The cruel-looking top of the wall will also have a wholesome deterring effect upon mischievous boys, who are generally cute enough to leave a fearsome contrivance of this kind severely alone, and thus accidents are avoided.

Having laid down the floor, set in uprights at the four corners of three-by-three inch quartering, making them all exactly the same height as the eaves of the covered portion. At the cornor immediately opposite the window in the covered part set in another upright at three feet or three feet six inches from the corner one. On this space you will make a door, or rather, for preference, a pair of double doors as previously described, to give access to the flight when necessary. Similar uprights should be set at intervals of about six feet between each corner to give additional support to the netting and especially that of the roof.

Some Necessary Matters.

Connect all the uprights round the top, by dovetailing, if you can manage it, with lengths of the same timber, and connect each of the intervening uprights on the two sides with similar pieces, so as to form supports for the wire of the roof to be nailed to. Then cover the whole with half-inch-mesh netting. Lastly if a sheet of tin or zinc is nailed around the bottom to a height of about nine inches, and then curled over so that its upper edge points downwards and forms an arch—thus ⌒—it will make a very fairly impassable obstacle for mice wishing to gain access to the aviary via the flight. Finish off with two coats of black paint.

To give the birds access to the outer flight, the window, if it has a casement that opens, should have the loose part removed bodily, and the necessary alterations made to enable it to be hinged on to the lower edge and to fall flat against the front of the wooden portion when open. If it could be arranged to fold inside the shed instead of outside, it would help considerably to provide against accidents to the glass. If this plan is adopted it will still be necessary to cover the window-frames with pieces of netting to act as danger-signals for the birds and prevent their flying against the glass when the window happened to be closed. But as this existing window was a very large one—larger, in fact, than might be advisable to have open at all times—I should, in case it did not now open, leave it entirely alone, and cut out a portion of the wooden front between the window and the wall sufficient to make an opening about a yard square, beginning from the eaves downwards. This space should then be covered with a solid wooden shutter, hinged on to the front, and made to drop downwards.

If a pair of struts are now made on the outside of this shutter, and sockets to match nailed on the front of the shed a little below the bottom edge of the open space, the shutter, instead of dropping down quite flat and useless when opened, may with the aid of the struts be lowered to a right angle, when it will form a kind of table in front of the open space for the birds to alight upon in entering or leaving the covered part.

The bath as previously described, should be dispensed with, and a similar structure made in the flight in the most convenient position for filling and emptying it easily. In the particular case which gave rise to these notes there would seem to be no better position than to simply construct it on the other side of the wooden partition separating the shed from the wired flight, in order to still take advantage of the drain which exists near that corner for carrying off the waste water.

The floor of the flight should be covered with a layer of builders' sharp sand to a depth of about two inches. The nature of the floor will preclude the possibility of planting any shrubs to grow. Live plants or shrubs growing in pots or boxes may of course be used, and changed as often as they become ragged and unsightly by fresh ones from the garden or nursery, whilst the soiled and damaged ones may be planted out to recuperate for future use. Natural boughs and bushes may also be fixed to bases and stood about the flight, and swing perches, suspended from the roof, introduced.

Where to Feed.

All food and water vessels we should make a point of keeping in the covered part exactly as was previously described, in order to encourage the birds to make free use of this portion regularly; otherwise it may be discovered that some shy and wary birds, particularly those that have not been used to this mode of existence, are apt to hold aloof from it, and prefer to shiver out in the cold than seek shelter under cover. Green food may be thrown on the improvised table in front of the exit, as may also a little of some seed occasionally.

If the waste seed from the table inside is scattered on the sanded floor of the outer flight and raked over, it will sprout and produce a fine cress-like food, which will be greatly appreciated.

Suitable Inmates.

It would be difficult to say what such an aviary as this would not be suitable for. It may perhaps best be described, like a certain class of old-fashioned and still sought-for domestic retainers, as generally useful. I would go a little farther and say that providing the aspect was tolerably favourable, the situation in a fairly hygienic condition from a human standpoint, and with the addition of solid wood or tarred felt top to the wire flight to keep out the rain instead of wire, and the simple heating apparatus described below, there is practically no class of birds that could not be kept in it quite successfully.

In its present condition it would answer admirably for a collection of British birds which might be classified into two great classes for such a purpose as this, viz.: soft-bills, or purely insectivorous species; and all other species, excluding birds of prey and their near allies. Under such an arrangement all the Finches and their allies would go in on equal terms with the Buntings, Pipits, and Larks, if indeed the latter were included at all. For my own part, I would rather keep the poetic type of the Larks, to wit, the Skylark, in a cage, than in an aviary. "Bird of the wilderness," though he be, he is to my mind somewhat less out of place in a cage than in any enclosure of this kind. This method of grouping will doubtless appear a drastic one to many, but experience will not be long proving it succeeds beyond the expectations of those who have never ventured to try it.

The method of feeding such a combination would be a kind of extension of the stereotyped Finch diet. A more liberal supply of such seeds as hemp, millet, and oats; an occasional handful of mealworms, caterpillars, and such small insect food; and a pan of crushed mixed biscuits is all that is required to keep the Buntings and others in good health and condition, and it will also prove of great benefit to the Finches and more exclusive Seed-eaters generally.

Almost any of the commonly imported foreign birds would succeed well, and all the hardy free-breeders would doubtless nest very successfully. For breeding Budgerigars it would be first-rate, whilst a single pair of Cockatiels, Redrumps, or any of these medium-sized Parrots, should do well on it. If the aviary was devoted to a single pair of birds and provided with plenty of cover and a few suitable hollow logs for nesting, Hybrid Parrots or Parrakeets might be tried for with a fair prospect of success.

To hark back to Canaries; this aviary minus the wire flight might be utilised very usefully to turn in well-bred young Canaries to complete their growth and go through the first moult. Or again, it would, if of sufficient size, do well to combine breeding cages and a wired-off portion for a flight for the young. In this case the stack of cages should be placed on staging along the back of the room opposite the window, and extend about two-thirds of the whole length of the room, leaving the remaining one-third of the entire space, at the end opposite the door, to be separated by a partition of wire notting and form a flight for the young birds during the latter part of the breeding season, and whilst moulting.

(To be continued.)

THE BEGINNERS BUDGET.

Are you starting Canary breeding? If so you will never make a better investment in your life than by purchasing the following—

	Post Free.	
Canary Breeding for Beginners - By Claude St. John. *Illustrated.*	7d.	THE LOT POST FREE 2/-
House's Canary Manual - - - *Illustrated.*	1/2	
The Stock Book. (Our invaluable "Breeding Room Registor.")	7½d.	

SEND THAT 2/- P.O. AT ONCE.

A Postal Order for 2/6 will bring you CAGE BIRDS 1908 ANNUAL in addition.

F. CARL, 154, Fleet St., London.

NOW IS THE SEASON.
BUY THE STOCK BOOK.

The Latest Publication for the benefit of keepers of cage birds. Is framed on novel lines and contains many entirely new departures. Is absolutely indispensable to everyone interested in the hobby.

COMPILED BY G. E. WESTON.

MAKES BIRD BREEDING EASY.

This "BREEDING ROOM REGISTER & BIRD KEEPER'S ACCOUNT BOOK (copyright) offers in a handy form a means of keeping—

The complete pedigree and description of every bird in one's room.
A full record of the season's breeding experiences.
An account of every young bird reared, and how it was disposed of.
A register of one's doings at the shows (the most complete and useful yet devised).
A cash account for the year.
A profit and loss account of the season's proceedings, and a balance sheet showing how much one has invested in the hobby.
A series of Registers will thus furnish a concise record of the career of a fancier as a breeder and an exhibitor from year to year, or over any number of years.
Many useful Emergency and other Hints will also be found in its pages.

Price 6d. from any Newsagent, or 7d. (postal order), post free from THE MANAGER, "CAGE BIRDS," 154, Fleet Street, London, E.C.

THE GREATEST VALUE FOR MONEY EVER OFFERED. GET YOUR COPY AT ONCE.

UNDER THE WHITE ROSE.

MEMBERS of the Y.C.C. will do well to note that nominations of officers for next season must be returned before the 31st March, to the secretary, Mr. J. Greaves, 279, Tollings Road, Bradford. The nomination papers will be found in the centre of the Y.C.C. year book for last season, 1907-1908.

THE annual dinner of the City of Bradford O.S. takes place on Saturday, March 14th, at their headquarters, the Flying Dutchman, Leeds Road, and all fanciers are welcome. The affair is a good one, and will doubtless be thoroughly enjoyable.

WIBSEY and District C.B.S. (that society for pie suppers!) is forging ahead at a great pace. Last year they numbered about 18 or 19 members, but now they have got up to the magnificent total of 69, no less than 14 new members being made at their last meeting. They tell me their ambition is to top Great Horton's score of last year, viz., 124. I hope they do it.

THE Grand Amalgamated Social and Prize Distribution held on Saturday evening last at the Market Tavern, Bradford, proved a gigantic success, even beyond the ambition of its most enthusiastic supporters, no less than 200 fanciers putting in an appearance. Most of them had a long stay, from 6 to 11 o'clock, and even then were in no hurry to depart from such congenial company. Mr. D. Sunderland makes an ideal chairman, and much of the success was due to his tact and geniality. In the chair he was supported by Mr. J. Greaves, the president of the C.M.Y.C.C.; Mr. H. W. Battye, president of the Yorkshire Union; Mr. W. A. Cowgill, president of Bradford and County British Bird and Mule Club (Mr. Sunderland, of course, being the presidential representative of the Y.C.C.), Mr. J. W. Ramsden, of London; Mr. R. Garnett, secretary, C.M.Y.C.C.; Mr. F. Hammond, secretary, Yorkshire Union; Mr. W. R. Myers, secretary British Bird Club; Mr. Carl, and other gentlemen. The Presidents of the respective societies presented the prizes to the successful competitors, each and everyone of whom came in for enthusiastic receptions. The display of prizes was truly magnificent, and must have represented a large amount of money. Cups, teapots, etc., galore; just the things to put a little more heart into those who had not a share in the spoil, and spur them to greater efforts. The harmonious part of the programme greatly helped the success of the evening. The general wish of the fanciers present was that we should have many more such evenings in the time to come.

SOME of the prominent Bradford fanciers are said to be poor talkers. Well, they may be before a large company such as assembled on Saturday last, but get them in a corner with about another half-dozen fanciers, start them on something in the birdy line, and they'd talk a hen and chickens to death.

WE have still another new society to add to those in Bradford and District, the "Tong and District C.B.S." having been formed during the last week or so. A very good beginning has been made, no less than twenty-four members being obtained at its inaugural meeting. Mr. W. H. Shackleton occupied the chair, and he has promised to do his utmost to assist the society. This district is perhaps the only one around Bradford that has not been represented, and I think there is plenty of scope for a good society, and I hope it proves a success.

THE formation of the Norwich Club for the county of Yorkshire is now to take definite shape. A meeting to discuss details is to be held at the Market Tavern, Bradford, on Saturday, March 14th, time and notice of which will be found in another column. The club is a much needed one, and will doubtless grow to large dimensions in a very short space of time, and it behoves the lovers of this variety to attend the meeting and assist in its formation.

ON Monday next, March 16th, Mr. Samuel Dean, of Great Horton, travels to Manchester (to give the members of the Manchester and Northern Counties O.S. a paper on "Yorkshires," and on the Tuesday he is booked for the Shipley O.S., on the same subject.

ON Saturday next another meeting—or should I say discussion—is to take place at the Market Tavern, Bradford, the question being the "Length of the Yorkshire Canary," chair to be taken at 7 o'clock. Mr. H. W. Battye is to take the short side, and Mr. W. H. Shackleton the lengthy side of the question. At last Saturday's social Mr. Batiye threw down the gauntlet, and proffered to take either side in a discussion, if somebody would take the opposite. This was taken up by Mr. W. H. Shackleton, who, as he had choice of "weapons," elected to take "length." Hard lines, Harry; you would have felt more at home on the long side, for you like a good cage one. Anyway, the discussion should be very interesting, as well as instructive, and fanciers will do well to attend.

"STRAIGHT 'UN."

THE LATEST CONUNDRUM.

When is a Headline Not a Headline?

Mr. Carl Wins the Case brought against him by Mr. John Tyson.

At the City of London Court last Friday, March 6th, Mr. J. Tyson sued Mr. F. Carl, proprietor of CAGE BIRDS, for the sum of Five Guineas. The case had a certain interest for show managers and advertisers, but little for the general public. Many prominent fanciers were present.

The Plaintiff claimed that the amount was due in respect of advertising in connection with the 1907 show of his association. In the result CAGE BIRDS was entirely vindicated, His Honour deciding in Mr. Carl's favour with costs. The point at issue was solely as to what constituted a headline in advertising parlance.

The Plaintiff was represented by Mr. Walter Stewart, instructed by Messrs. Child and Child, and the Defendant by Mr. Artemus Jones, instructed by Messrs. McKenna and Co.

The Judge ruled at the start that the question the Plaintiff's Counsel endeavoured to raise as to the admitted cutting off by the Plaintiff of the Defendant's advertisement from the Cage Bird Union rules had nothing to do with the point in dispute, and that the whole question in the case was one for experts as to what was the proper definition of a headline. The onus of proof falling on the Defendant, his expert witnesses were called first. Messrs. Harrower (show manager), Macleod-Moore (advertising expert), Ramsden (show manager), and Keliher (printer), thereupon gave testimony in Mr. Carl's favour, and were keenly cross-examined by Mr. Stewart, but without effect. Messrs. Bashforth (advertisement clerk) and Fillwell (printer's foreman) were called for the Plaintiff, and both of them declared the advertisements in dispute to be headlines, although consisting of more than one line.

Both Plaintiff and Defendant were examined, cross-examined, and re-examined at length and very closely. Their evidence differed materially in two essential details. Most able speeches were made by counsel on both sides. At the conclusion of a very patient and prolonged hearing, His Honour said:—

"If I had to decide this case on the intention of the parties, I should find in favour of the Defendant, but I have not to decide on the intention of the parties. The Defendant said: I did not complain about the 1906 catalogue because I thought I had no right to do so at that time. He then seems to have written making a stipulation in order to defend himself from the position of the year before. He orders in writing "Headlines" as advertisements, and, therefore, we have the technical term used at once. Consequently no matter what the intention of the parties is, when they use technical terms it is not for them to say that technical terms have any meaning other than they possess. Here you have two sets of experts giving us totally different views of the case. I have no reason to believe one set of experts more than the other, and there is not, I suppose, a great deal of difference in the weight. Consequently I am thrown back on my own view as to whether this thing which appeared was a headline or a display advertisement, and I may say that *from the very early part of the case I myself had no doubt whatever that this was a display advertisement*, and, therefore, there must be judgment for the defendant for the technical word used."

As the case was one involving the correct use of a trade term, leave to appeal was allowed as a matter of course. Up to the time of writing it has not been taken advantage of.

Judgment was entered for defendant with costs. Counsels' fees allowed.

In connection with the above case we recently circularised practically every society in the kingdom. The replies received were very numerous. Three of them were not in our favour, and five other opinions were doubtful. The remaining two hundred and eighty odd gave the same definition of a headline as our witnesses and Mr. Carl did in Court—viz., that a Headline was one line of type and no more at the head of each page of matter. These letters may be seen at our office by anyone sufficiently curious about the point in dispute. The answer to the riddle, therefore, When is a headline not a headline?—seems to be—When it is a displayed advertisement.

Ringdoves and Canaries.

A curious story was printed by the "Field" about the affection evinced by Wood Pigeons for a human being. A pair nested in a tree at Hampstead, and when the occupier moved to Regent's Park the birds followed him, and nested in a tree opposite his windows. The supposed clue to this remarkable behaviour of the Doves is that the gentleman was the owner of some "fine singing Canaries," and either the Pigeons were fond of the singing of the birds, or associated it with the presence of the owner of them.

HEALTH & STRENGTH

Deals with all kinds of Athletics, including **Football, Wrestling, Boxing, Weight-Lifting, Fencing, Running, Ju-Jutsu, Gymnastics** of all kinds, **Swimming, &c., &c.** Gives free advice on all questions of Health, Diet, &c., to all readers.

EVERY THURSDAY, 1d. Sold Everywhere.

Get a copy to-day, or send for Free Specimen to "HEALTH AND STRENGTH," 12, Burleigh St., Strand, W.C., mentioning "C.B."

All communications for this column should be written on one side of the paper only, duly authenticated with the name and address of the writer, not necessarily for publication, and sent to H. Norman, Editor, "Wild Bird Life," "The Eyrie," Salisbury-road, Carshalton, Surrey, by Monday in each week. Original observations and records invited.

The Rook's Home.

I cannot recall any instance quite on a parallel with the shallow nest of the Rook. The home of the Heron is probably as near as any. The nest is somewhat similarly built, and is situated in tall trees, but not so frequently in exposed positions. There is also a great difference in the mortality during the breeding season, between the two species. Eggs and half-fledged young are quite common objects upon the ground beneath the nests of the Herons, and although young ones are occasionally found under the Rookery, there is not anything like the mortality that exists with the larger bird. The nest of the Heron is bulky and fairly deep during incubation, but becomes trodden down and flattened out while the young are being reared, and it is at this time that so many of the callow brood meet with an early death. The nest of the Reed Warbler is suspended between the reeds upon the marshes, or along the banks of some tidal river. It is constantly swaying and rocking in the breeze, but if we compare it with that of the Rook, we at once see how differently it is constructed. It is firmly and thickly built, cup-shape, and smoothly finished inside. It is also very deep; so much so that the old bird can get so far into it, that anyone passing by can barely discern the tip of her tail and beak, or rather the top of the head, for our wild birds like to watch their enemies, and not do as the Ostrich does—hide the head and fancy one is unable to see the body. A sitting bird will always watch the intruder no matter how well she is hidden.

Birds in the Wind.

March is a fickle month, and we are daily having evidence of its vagaries. The keen wind shifts from east to north-east, and then to the South-west, from which quarter, accompanied by heavy rain, it blows a gale. Although such weather is natural at this time of the year, and we get somewhat used to it, yet we long for the sunshine and soft breezes of the ideal spring. Of all wild creatures, possibly birds dislike the wind most of any. One sees less bird life in the course of a ramble across country upon a rough day than at any other time; one would sometimes think that all the feathered life had migrated, so scarce do they appear to be, but the fact is the birds are not in their usual haunts. We must look for them elsewhere. Let us try the wood, the sheltered side of the spinney, or the hedgerows in the valley. As we disturb the larger birds, they rise above the tree tops, and are quickly shot across two or three fields by the force of the wind. When beating against the gale, birds fly low, and it is always an interesting sight to watch the home-coming of the Rooks and Jackdaws at this time of the year. They skim the grass-land, and flap laboriously over the hedgerow; the wind catches them, and tosses them into the sky like balls of paper. Their efforts to get out of some fancied danger are almost laughable. How vigorously they flap their wings and try to turn either to right or left, and are as quickly carried back! The Rooks, the 'Daws, and the shy Wood Pigeons are obliged to get about; their food lays in the open meadows and fields, and no matter what the weather is they must be out and searching. Of the three species, the Wood Pigeons are possibly the best off, for in rough weather they will keep to the woods as much as possible, and once more hunt through the carpet of dead leaves for any acorns, or beech masts, which have been overlooked in more prosperous times. The smaller birds feed along the lanes and by the edge of the wood, and when disturbed they flutter along before one, loth to leave such situations; and when compelled to do so, they quickly return. In such weather the thrushes sing less frequently, and although the joyous Skylark is bubbling over with music, he can hardly trust himself aloft in some of the more boisterous periods, but quickly mounts when there is any lull in the elements. Of the smaller birds the only species that appears to take a delight in carolling upon a rough day is the Linnet. It is a curious fact, but one can always hear this little favourite in such weather. Go gently along the hedgerow or sheltered edge of the common, and there he is to be seen, boldly perched, and somewhat huddled, but his swelling throat shows plainly that he is full of life and vigour, at times we can hear each note distinctly; at others the strain is taken by the wind, disjointed, and scattered broadcast. The fondness of Linnets for singing in rough weather, was noticed by one of our poets, who refers to it in the following lines:—"The women sang between the rougher voices of the men, like Linnets in the pauses of the wind."

NOTES AND QUERIES.

Greenshank and Redshank.

In reply to F.J., Norfolk, the Greenshank is a summer migrant and breeds only in Scotland. On the other hand, the Redshank is a resident, and is fairly common upon the marshes by the sea, and upon the banks of the tidal rivers. No doubt its numbers are greatly increased during the winter months, when so many waders and shore birds visit our coasts. It is a well known bird by frequenters of the marshes, its quick jerky flight, with trailing legs and loud noisy calls, making it ever a conspicuous object. Especially is this so during the breeding season when it acts as sentinel for all the birds nesting within some hundreds of yards of the marsh road or footpath.

The Early Cuckoo.

We laugh rudely at the man who solemnly affirms that he has heard the Cuckoo calling in the early days of March. Although such early visits are not thought probable according to our knowledge of the bird, which loves the sunshine of the early Summer, yet an early visit by accident to this country is no more impossible to the Cuckoo than it is to any of our other migrants. This bird is just as likely to be blown over during rough weather, as other smaller creatures are. Last year it was reported from Cornwall in the middle of February, and at Barnet, to the north of London, on March 3rd, and in Wales about the same period. Unfortunately the cry of the Cuckoo is a sound easily imitated, and in the fields and woods sounds are softened and somewhat changed. I should like to hear a Cuckoo in early March, but I should be much more satisfied if I saw it.

Destroying Blackbirds.

A Western paper printed some time ago the account of a systematic Blackbird shoot, at which many birds were destroyed. This has caused quite a torrent of letters from sympathetic readers, and evidently there is widespread indignation at the slaughter of these golden-billed songsters. Most of us have a soft place in our hearts for these handsome birds. They are no new acquaintances; we have not recently learned to know and identify them; they are the friends of our childhood, and share with the Robin our first lessons in ornithology. Naturally one feels sad that such destruction is necessary, for the fruit growers contend that it is. One is inclined to think that a general destruction of eggs for a season or two would be more humane than destroying the living bird.

The Coming of the Wheatear.

We have not yet seen the Wheatear, the bold fronted bird with the white patch at the root of the tail, which flies from clod to clod, eyeing one suspiciously. It is time he was here. Possibly some sheltered hill-side along the South Downs is alive with these charming migrants. One peculiarity about them is their individual isolation. There may be fifty of them, covering perhaps two or three acres of ground, and yet there is no flocking or gathering together. Each bird keeps away from the others, although constantly in sight. By old records we are led to think that Wheatears are considerably less common than they were at one time. It is very difficult to account for some of these happenings. There may be some local influence at work outside this country which may be the means of destroying numbers of them during migration.

ALWAYS USE OUR

DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor for the *bona-fides* of either buyers or sellers. In all transactions the adoption of our Deposit System should be insisted upon.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient, plus the extra postage incurred, has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller, stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from *both* parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has *not* been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or, if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor. We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

PREPAID ADVERTISEMENTS

UNDISPLAYED.—Three Words a Penny up to eighteen words, MINIMUM Fourpence. One Halfpenny per Word for each word over eighteen.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and, after the first eighteen words, are charged at two words a penny, but no single advertisement, even if accompanied by others, will be charged at less than the minimum price, viz., Fourpence.

Headlines or Footlines 6d., 8d., 1/-, 1/6 according to size.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL.

The Proprietor reserves the right to refuse any advertisement, or to cancel any advertisement ordered for a series, at any time, without assigning any reason for so doing.

Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, London. Terms for Display Advertisements on application.

A. Fox, St. Helens.

570 CHALLENGE BREEDING CAGES
were sold by me last season, and not one deposit was returned; for proof, write to Editor of CAGE BIRDS. They are made from selected planed pine boards, black enamelled outside, blue inside, sliding partitions, sand trays, nest boxes, seed hoppers, and loose wire fronts; 18 inches, 2/-; 20 inches, 2/6; double, 33 inches, 4/-; 36 inches, 4/6; any size cage to order. Remember, these are made from pine boards, not soap boxes.—Henry Morris, Cape Hill, Birmingham.

FOR JOINER-MADE CAGES CHEAP.
Breeding cages, single, 18 inches long, 15 inches high, 1/9; 26 inches by 15 inches by 11 inches, 2/10; double, 36 inches by 15½ inches by 11 inches, 4/6; 3-compartment, 40 inches, by 15½ inches, by 11 inches, 5/6; any size made equally cheap; remember made by experienced joiners only, these cages have given satisfaction in the past, and are much improved this season; list of 51 sizes free.—Pass, Cage Maker, 48, Annesley-rd., Hucknall, Notts.

ALUMINIUM CANARY RINGS.
The lightest and best ring made, the edges are perfectly rounded off, price 25 100., 50 1/6, 100 2/9, post free with or without Flanges.

CHARPIE.
Best White Charpie the finest nesting material much better than Cowhair, cleaner and warmer, price 1 lb. 1/6, ½ pound 10d., ¼ pound 6d., post free. Enclose 1d. stamp for samples. Special Terms to the Trade. **GEO. B. LECLAIR, 150, Wallwood Rd., Leytonstone, London, N.E**

THE "DURABLE" WIRE FRONTS
Finish that cage you are making in the best possible way, by using a "Durable" front. Remember you cannot get this quality for lower prices than the undermentioned. Nothing used but the very best punched bar and 16-gauge wire (not pinwire). Prices: 12 inch, 6d., 15 inch, 7½d., 18 inch 9d., 21 inch 10½d.; all 12 inches high; fronts with four crossbars, 14 inches high, 15 inch 9d., 18 inch, 10½d., 21 inch, 1/-; show cage fronts (Norwich, Crest), 4d. each, any size quoted for.—J. Walmsley, 6, Brandst., Nottingham.

BREEDING CAGES.
Best and most convenient cage on the market. Being a breeder myself, I know what is required. Beware of cages 8 in. wide; they are useless. Note my sizes and compare with others. Two compartments, 35 in. by 15 in. by 11 in., 3/6; three compartments, 53 in. by 15 in. by 11 in., 5/-; four compartments, two top and two bottom, 7/-; four compartments, 70 in. by 15 in. by 11 in., 7/-; six compartments, 10/-; eight compartments, 12/6; all the above are fitted loose fronts, sliding partitions, nest boxes, seed hoppers, etc., and are 11 in. wide. Customers own designs executed. Large bundles moss and hair for nesting, 6d., 9d., 1/-, post free.—Kendrick, Carpenter, 14 Cook-st., Coventry.

ARE YOU LOOKING

For Breeding Cages, Flight Cages, Drawing-room Cages, Singing Cages or any other Kind of Cage?

Also the very best "Charpie," imported direct from Germany, prevents sweating and does not harbour parasites as Hair does, being at once cooling instead of heating (beware of cheap substitutes and common cotton). Fresh clean Moss for Nesting—any quantity supplied.

Birdlime—strongest and best in the world—the original XXX, 4-1. per box free. List of Sparrow and other Traps, Nets, &c., free for the asking.

FREE CATALOGUE

Containing over **One Hun red Illustrations** in the many Different Kinds of

BREEDING CAGES

suitable for all classes of Canaries, Mule breeding, &c. A Double Breeding Cage fitted with **every** requisite please note nothing omitted, from 3/6 each, also a good London Breeder (made, not blown together) for 3/6, with top chamber, &c. Also Jeromes Breeding Cages. In fact the largest stock of such goods and the best value in Europe. A post card with address will bring this useful Catalogue immediately to you. Read Opinions.

Well satisfied.

Redbourne, Keston Lindsey. March 6th, 1908.—I received the cages all right, and am well satisfied with them.—G. Norris to W. Rudd.

Market Street, Lutterworth. March 5th, 1908.—All goods to hand, which are very satisfactory in every way. Thanking you for same.—F. Clarke to W. Rudd.

6, Jenkins Row, Derl. March 2nd, 1908.—Just a line to say I received cage in perfect condition, and am very pleased with it. The birds I had are busy nesting. They are a grand pair of birds; there is no doubt about it.—Dd. Evans to W. Rudd.

Well pleased.

Alma House, Sacriston. March 4th, 1908.—I received cage all right, and am well pleased.—R. Pritchard to W. Rudd.

Best ever bought for money.

12, St. Martin's Place, Dorking. March 9th, 1908.—I received the cage quite safely on Friday and am very pleased with it. It is the best I have ever bought for the money.—Wm. Stoner to W. Rudd.

10, Wimpole Street, Ashton-under-Lyne. March 9, 1908.—Cage arrived safe, and I am highly satisfied.—T. Dormend to W. Rudd.

23, Marine Terrace, Criccieth. March 14, 1908.—The Patent Breeding Cage to hand. I am pleased with it.—D. L. Roberts to W. Rudd.

100, W. Princes Street, Helensburgh. March 12, 1908.—I received the cage all right; I am well pleased with it. I think it well worth the money.—J. Breheny to W. Rudd.

W. RUDD, *THE* Bird Specialist, NORWICH.

Largest and Cheapest Manufacturers.

HENRY TAMS, Warren Street, LONGTON, STAFFORDSHIRE.

BREEDING CAGES.

made by practical workmen out of best selected pine boards, planed inside and out, not left rough inside to breed red-mite, but made as smooth as the outside; all made on my own premises, not sent out to be thrown together, so as two men can get a profit; fitted with sand trays, nest boxes, seed hoppers, sliding partitions, loose punch bar fronts, etc.; 18 in., 2/-; 20 in., 2/6; 24 in., 3/-; double, 30 in., 3/6; 33 in., 4/-; 36 in., 4/6; all kind of cages made for the trade.—Ashmore, 167, Heath-st., Birmingham.

Dodge's Fictitious Cow Hair.

Many users write saying—**"It is the best nesting material ever known, and it rears most youngsters."**

Repeat orders from all who have tried it. Close on 100 orders received this season. 1 lb makes 80 nests 2/6 per lb., 1/9 per ½lb., 1/- per ¼lb.

MORTEN DODGE, Manufacturing Chemist, STRANGEWAYS, MANCHESTER.

THE NEATEST CAGE FRONTS,

12 by 12, 3d.; 14 by 12, 3½d.; 16 by 12, 4d.; 18 by 12, 4½d.; 20 by 12, 5d.; 24 by 14, 6d.; any size 3d. foot; punched bars, 8d. dozen, 7/- gross. 3/6 half-gross; best tinned wire, 4 feet lengths, 4d. lb., 7 lbs, 1/9, 14 lbs. 3/3, 25/- cwt.; pine bars, 7d. dozen; breeding cages, 18 inches 2/-, 20 inches 2/6, 24 inches 3/3; double breeder, 30 inches 3/6, 36 inches 4/3; cages made to your order, and work guaranteed; the trade supplied; dealers send for list, I can save you money all roads; open to exchange any of the above for Canarics.—Pimm, Cage Maker, Icknield Port, Birmingham.

3/6. DOUBLE BREEDERS. 3/6.

36 in. long by 18 in. by 9 in., blue inside, black out, completo with nest boxes, sand trays, sliding division, forming flight cages and fitted up with loose punch bar, wire fronts; every cage wnshable; made by experienced cage-makers, who know how to make cages. It is impossible for all the imitators combined to produce anything approaching the cage I send out. Have one from elsewhere at higher price, then one of mine, and put them side by side. I shall be perfectly satisfied with the result. Remember, I lead the way for others to follow me.—G. White, 122, Great Hampton-row, Birmingham.

HARRY ALLEN,
THE ORIGINAL LINNET KING.

Champion of all Champions, patronised by all the leading exhibitors, mule breeders and contest singers. I have, without doubt, the finest strain in the world, bar none. Beware of spurious imitations, they will not give you satisfaction; mine never fail to please. Big, fine cock Linnets, well pencilled, good nutty-brown, very tame, 1/6 and 2/- each. A few gems, impossible to get bigger and better, 3/- each. Big, broad-chested cocks, picked specially for muling, 2/6 each. Remember Sergeant Smith, of Leeds, bred 68 mules with three of the above kind, cock Linnet, singing beautifully, in singing cage, a packet of my special mixture, and instructions how to feed, 3/6 lot. All taught by my champion. I may say, any one of his notes is worth double the amount. I defy any dealer to supply the same for the money. House-moulted cock Linnets, singing hard, finger-tame, 3/6, 10/6, 15/6 each, including contest cage. These birds are specially trained by myself, and can win. Clubs supplied. Cock Larks, on song, 1/6 each; Redpolls, as large as Linnets, 1/6; also a real gem, one of the largest ever seen, with pink breast, 3/6, bargain. I have three Greenfinch-Canary mules, very large, in excellent feather, and can win, 6/6 each, or the three 18/-, real genuine birds. Linnet-Canary mule singing bard, 10/6. I have a beautiful pair of Zebra Doves, real pet bird, sacrifice, 5/6. Rose Cockatoo, 10/6; German cock Bullfinches, 6/6 each, real gems, one hand-reared, 10/6; Java Sparrows, 2/- each, 3/6 pair; Cuttthroats, 4/- pair; German Rollers, singing night and day, with clear, loud voices, 10/6, 12/6, 15/6 each, satisfaction guaranteed; cock Linnet and Canary, 5/-; cock Greenfinch and Canary, 3/6; cock Bramblefinch, house-moulted, sure muler, 5/6. Four packets of my special mixture, 1/-. If you want your birds to sing at one another, send P.O. 1/6 for my Book of Secrets, post free. "Midland Hotel, Bradford. Sir,—I am delighted with my beautiful Canary, it sings magnificently. Yours sincerely, Vesta Tilley, Male Impersonator, to H. Allen." I have hundreds of testimonials. I send nothing but the best that can be possibly got, and have supplied more winners, and sold more birds than any three dealers in England. Call in the Leeds Bird Market on Saturday night, and see me sell them as fast as I can get them out. Everybody welcome to the largest aviaries in England. Come and see the champion Linnet of the world. All my birds are on seven days' approval; cash or deposit; no waiting; state wants. Correspondence a pleasure.—Harry Allen, Bird Specialist, City Aviaries, Beckett-st., Leeds.

DON'T DELAY!! MARVELLOUS BARGAINS

A Chance of a Lifetime!!

☞ It is a well known fact no person can give the quality we can. All our customers are more than surprised at the marvellous value we are sending. This is no idle boast; pay a visit to our aviaries and see for yourselves. If you cannot do so, state your requirements, or write for Catalogue, post free. Read a few

Genuine, Bona-fide, and Unsolicited Testimonials

from hundreds received recently from all parts of the United Kingdom. They are not what we say, but what our more than satisfied customers write.

Rothesay.—First-class health and condition.

59, Montague Street, Rothesay.—I beg to advise you of the the arrival of the hen Canary to-day, a first-class health and condition, notwithstanding its long journey (18 hours), and the fact that we have the coldest weather of the year (frost and deep snow). I am very pleased with your selection; your packing is the best I have ever seen. Early next week you will hear from me again. — James McCrone to Mackley Bros.

Co. Durham.—Quite Satisfied.

Woodland, Butterknowle, R.S.O., Co. Durham. — Received the pair of Norwich yesterday. I am quite satisfied with them, and have written the Editor of "Cage Birds" to hand over the deposit. Thanking you for prompt attention, etc.—James Lea to Mackley Bros.

Grimsby.—Highly pleased.

274, Wellington Street, Grimsby. — Birds arrived safely and in sound condition; am highly pleased with them. Thanks for your prompt attention.—B. H. Rimmington to Mackley Bros.

Ireland.—Very satisfactory.

91, Quay, Waterford. March 7th, 1908.—The hen arrived safely. She is very satisfactory.—A. Hipwell to Mackley Bros.

Cambridge.—Well satisfied.

81, Sedgwick Street, Romsey Town, Cambridge.—Received the birds safely, and am well satisfied with them.—J. Dean to Mackley Bros.

Epsom.—Shall send for another.

7, Maldstone Terrace, Wyeth Road, Epsom, Surrey. —Received the bird quite safe. I am very pleased with it. Shall send for another shortly.—J. Middleton to Mackley Bros.

Oxford.—Very pleased indeed.

23, Wellington Square, Oxford.—I received the Canary on Friday; I am very pleased indeed with it, and it sings very nicely; thanks for your kind attention.—Arthur Wood to Mackley Bros.

Guernsey.—Quite satisfied.

I received the pair of birds last Saturday, and I am quite satisfied.—P. Druet, 1, Park Lane, Guernsey, to Mackley Bros.

Croy, near Glasgow.—Very pleased indeed.

Railway Cottages, Croy, near Glasgow.—Received the bird yesterday, all safe, and in first-class health, after 17 hours' journey. He was singing this morning. I am very pleased indeed, and thank you for prompt attention; also for catalogue.—Geo. Cooper to Mackley Bros.

Manchester.—Quality and condition.

The Cliff, Manchester.—Thanks for birds received —their quality and condition leaves nothing to be desired.—W. Whardmould to Mackley Bros.

Durham.—Best of condition.

Flag Row, Sunniside, Tow Law, Durham.—Received the pair of birds safely, Friday, in the best of condition. I am very pleased with them; they are really two good birds.—J. W. Pears to Mackley Bros

Macclesfield.—Well pleased.

The birds arrived safe Saturday morning. I am well pleased with them.—J. Duffield to Mackley Bros.

Kirkwall.—Best ever seen.—Nothing like going to the right place.

The Ayre, Kirkwall. March 3rd, 1908.—Bird to hand last evening; none the worse for its long journey. She is the best crested bred hen I have ever seen. There is nothing like going to MACKLEY BROS. when you require a bird.—Andrew Muir to Mackley Bros.

Rayleigh, Essex.—Very strongly recommended.

Lokoja, Hullbridge Road, Rayleigh.—Your name has been recommended me by a friend in a very high flown fashion for the purchase of a Canary. Trusting you will send me a good one.—A. E. Curry to Mackley Bros.

(After order executed.

Bird arrived safe; highly pleased.—A. E. Curry to Mackley Bros.

St. Helens.—Very pleased.

26, Water Street, St. Helens.—The crested-bred yellow hen arrived safe. I am very pleased with it. Shall not forget to write to you again when wanting anything.—W. E. Glover to Mackley Bros.

Dudley.—Safe and Sound.

570, Springsmir, Queen's Cross, Dudley, Worc. — Received the birds safe and sound. I am very much pleased with them.—J. E. Turner to Mackley Bros.

Aberystwyth.—Gives every satisfaction.

18, South Terrace, Aberystwyth.—The songster I purchased from you last autumn is giving every satisfaction. Please send . . . . cheque enclosed. —R. A. Pope to Mackley Bros.

Pontypridd.—Very pleased.

4, Lanely Terrace, Newtown, Pontypridd.—I received the bird quite safe, and am very pleased with it.—J. Bolton to Mackley Bros.

Heanor.—Highly pleased.

147, Ray Street, Heanor.—Received the pair of birds and breeding cage safely. I am highly pleased with them. I have had several fanciers come to see them, and they all speak highly of them. A Mr. Prince is going to have a pair.—Frank Orme to Mackley Bros.

Shaw, 97, Essex-rd., Islington, London, N. Five doors from Cross-st., green cars pass the door.

SANDIFORD'S FAMOUS NORWICH

1st, Two 2nds, Two 3rds, Two VHC's, etc., Crystal Palace.

Mr. C. Blackhurst won above with birds I sold him from our noted strain, which has won 40 firsts, etc., this season, which is more than any other two exhibitors put together in open competition.

SPECIAL OFFER!

Having selected my breeding stock,

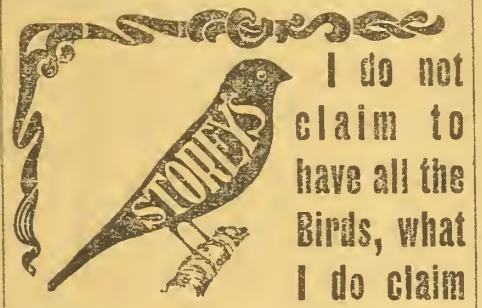
20 Good Pairs at 20s. & 25s. Pair,

on approval, all guaranteed from my wonderful strain. Some grand odd cocks and hens,

All above to clear, too many to breed with, see last weeks advertisement for more proof. Breeders 27 years. **J. SANDIFORD, Canary Breeder and Judge, Preston, Lancs.**

SILK'S CHAMPION NORWICH.

More winners produced from this strain than any other. Birds sold by me have won at most of the all-England shows in keenest competition, and a great number were bred from stock pairs supplied by me. Some of the champion exhibitors owe their success on the show bench to this wonderful strain; procurable only from me. I can supply the champions and give satisfaction, and will place the novice and amateur on the same footing by giving him exactly the same high-class Norwich at moderate prices. My pairs at 40/6 have no equal, and cannot be bought elsewhere at double; in fact, every bird I send out is double value. Why be disappointed with unreliable strains? Pairs properly matched by an expert and breeder. Special attention given to see that the cock and the hen have the necessary points to breed really high-class specimens. All orders have my personal attention, and fanciers can rely upon getting exactly what they require at moderate prices. Giant stock pairs, 20/6 to 40/6; Yellow cocks and hens, 12/6 to 25/6; ditto Buff, 10/6 to 22/6; approval to any part of the British Isles. A few choice Crests, Crestbreds and Yorkshires. Cream of the fancy reasonable.—A. E. Silk, Whitstable.



I do not claim to have all the Birds, what I do claim is that I have a lot of the best Typical Norwich it is possible to Purchase.

If you pay higher prices elsewhere you cannot get better birds. My prices are within the reach of all, and when you take the quality of the birds into consideration, you will be convinced they are by far the best and cheapest. Having over 1,500 birds to select from, I can supply you with odd birds or pairs that will give you every satisfaction. Call and inspect my stock; or let me send you birds carriage paid on 7 days' approval, at my risk.

I have a large stock of Good Typical Norwich in sound Healthy Breeding Condition. **Norwich Plainhead Cocks 6/6, 7/6, 8/6, 10/6, 12/6, 15/-, 20/- each; Norwich Hens, 3/6, 4/6, 5/6, 6/6, 7/6, 10/6 each;** Properly matched Breeding Pairs **8/6, 10/6, 12/6, 15/-, 20/-.** Special Bargains in Show Specimens and Pairs to breed sure winners, **25/-, 30/-, 35/-, 40/-** per pair including winners. **Crests and Crestbreds.** Cocks **8/6, 10/6, 12/6, 15/-, 20/-** each. **Hens 6/6, 8/6, 10/6, 12/6** each. Properly matched breeding pairs **15/-, 18/-, 20/, 25/-, 30/-.**

18, New Road, Winning, Durham. March 14, 1908.—The Norwich cock you sent me is a very good Bird; you will have more orders from me.—W. Thompson to Miss Storey.

Little Houghton, Lesbury. March 14, 1908.—The Norwich I received from you is doing very well. I will send to you for more.—J. Beckerton to Miss Storey.

3, North Road, Loftus. March 13, 1908.—I thank you sincerely for your prompt delivery of bird. I am very pleased with it, as it is such a grand bird. W. Belham to Miss Storey.

23, West Street, Guisebridge.—The last pair of birds you sent me, I am exceedingly pleased with; in fact, I never saw a better pair; I am sure you have given me every satisfaction in all my transactions with you.—J. Tongue to Miss Storey.

14, Elm Grove, Gosport. March 13, 1908.—Received birds safe. I consider them first class birds, especially at the price. Thanking you, I remain, E. Blackman to Miss Storey.

9, Douglas Road, Kilburn, London. March 14 1908.—The bird you sent me is a champion, and I am exceedingly pleased with him. I did not expect such value for a few shillings; wishing you success. —A. Stephens to Miss Storey.

A trial order will prove to you I give the best possible value for money. Travelling cages for journey 2d. each. I send all Canaries carriage paid on 7 days' approval. Full illustrated price list of birds, cages, and accessories 1d. stamp; illustrated list of birds post free.

Miss E. L. STOREY, BIRD SPECIALIST,

CROWLE, DONCASTER.

J. SAVAGE, GOOLE.

Westfield Aviaries, has grand collection Norwich Plainheads. Buy from the breeder, the fountain head of value. Every bird offered is own breeding; cold room. I have fine typical cocks, 6/6, 7/6, 8/6, 10/6, 12/6, 15/-, 20/-; grand lot hens, rare size and type, 3/6, 4/6, 5/6, 6/6 upwards; breeding pairs, 8/6, 10/6, 12/6, 15/-, 20/-; my 10/6, 12/6 pairs are marvellous value; cocks worth the money; well-fed Buff cocks, fit for showing, 12/6, 15/-, 20/-, 25/-, 30/-, 40/- each. I could fill columns with testimonials received from highly satisfied customers, but my birds tell the tale. Birds' carriage paid; packages free; approval.

J. BERTIE,

cage bird judge, has one of the finest collections of Norwich in the Fancy, but at present has not much time to exhibit. But can supply sure winners and stock birds at very reasonable prices. Those short, stout, deep-chested ones, with tail and wings to match, good size, with grand head, and well filled in neck. The kind that do win under a judge that knows his business; stamp; approval with pleasure.—The Cottage, Steedman-avenue, Mapperley, Nottingham.

Try one.—Varney, Stratford.—"The Elms, 18, Whitehouse Loan, Edinburgh. — Hummell arrived safely, and sings lovely; it is a pretty bird, and gives satisfaction. — N. Turnbull." — Birds arrived —are singing well.—R. M. Lee, 79, Mill Street, Crewe."—"Broom, Newton Mears, Glasgow.—"The birds arrived in good condition; I am very well pleased with such value.—J. Broom." 32, Easson Road, Darlington.—Bird to hand. I like the song wonderfully well, and thank you for your prompt delivery and attention to my instructions.—H. Hutchison."—Send all orders to Varney, Stratford, London.

14 days' Free Trial at our risk.

These are the conditions on which we send our Celebrated Contest St. Andreasberg Rollers, price 15/- only, and if you can get a better at double the price we will give you ours, and these Rollers don't require Fancy or Fictitious names; they can prove their own value, and will please all Fanciers by their sterling worth and marvellous change of notes and length of song. Scores of Testimonials weekly. Deposit your 15/- with C.B.

We don't want your money

till you are fully satisfied, and will send you one of the very best Rollers you ever heard in your life on 14 days free trial at our risk. Don't buy on any other terms, no matter whom you deal with. German Hartz Mountain Canaries, in full song same as sold by others as Rollers, price 6/-, 7/- and 8/6 each. Roller Hens, 2/6 and 3/6 each. All on 14 days trial at our risk. Singing Cage Cabinets with closing shutters. Complete 2/6 each. Some Grand Yorkshire and Norwich Canaries for sale, cheap; state wants; send for list. Anything alive, bought, sold or exchanged. We have won thousands of prizes.

NORTHERN AVIARIES,

ORMSKIRK ROAD, PRESTON.

CAN I SEND?

Can I have the pleasure of sending you a genuine, highly-trained Roller, carriage paid to your address, on seven days' approval, at my risk? I undoubtedly have the largest stock of singing Canaries in England. High-class St. Andreasberg Rollers in full song by day and artificial light, with long, waterbubble runs, barp, bell and gong notes, long, deep, hollow rolls, etc., etc. Prices according to quality of song, cocks, 8/6, 10/6, 12/6, 15/- each; pure Roller hens, 3/-, 3/6, 4/- each; properly matched breeding pairs, 11/-, 12/6, 15/-, 17/6; neat, joiner-made breeding cage, with loose wire front, all complete, ready for use, 2/9 each; travelling cages for birds, 3d. each extra. I have many thousands of unsolicited testimonials from delighted customers open for your inspection, of which the following are samples:—"Albany House, Coleshill, Llanelly, 14th March, 1908.—Bird arrived safe, in perfect health and condition. It is singing lovely, and is a credit to you; it would be cheap at double the price you charged. I am highly pleased. E. Sutton to Miss Storey." "76, Earnshaw lane, Conisbro', Rotherham, 13/3/08.—Roller arrived in pink of condition, and is a champion songster, his notes are simply beautiful. M. Birch to Miss Storey." "Union-st., Gt. Aberspehan, Mon.—I require another Roller for a friend. He has some good birds, but would exchange any two for the one you sent me. I won first and special, value £3 3s., with many points to spare, for best songster, and have had numerous inquiries for price of bird, and have referred them to you for the same quality of Rollers as mine at reasonable prices. I. Jones to Miss Storey." "High-row, Fair Hill, Haltwhistle.—Received H.M.R. on Thursday, and must thank you for same. It is an extra good bird for the money, commencing to sing as soon as unpacked. There is no need to wait for approval. H. Pearson to Miss Storey." "57, Old rd., Ashton-in-Makerfield.—The Roller is a little champion. I would not like to part with him for twice the price I paid you for him. Mrs. Johnson to Miss Storey." I send all Canaries carriage paid on seven days' approval, at my risk. New illustrated price list of birds and cages; send stamp for postage; neat travelling cages 3d. extra.—Miss E. L. Storey, Bird Specialist, Crowle, Doncaster.

CHAMPION ROLLERS.

Notice.—I have a splendid consignment of those extremely musical St. Andreasberg Rollers; these are splendid day and gaslight songsters; they are delightful, with their deep bass rolls, hollow rolls, sweet silvery trills, water bubble runs, piccolo trills, bell, sharp and going notes, etc.; these are splendid quality, and are certain to please you; all on 6 days' approval, on receipt of P.O., or you can deposit the amount with the Editor, 8/6, 10/6, 12/6, 15/6, hens to match 3/-, 3/6, 4/-, inspection invited. — William Shaw and Son, 97, Essex-road, Islington, London, N.

TO WISE MEN

a word is sufficient. I have just received my last consignment for this season of the celebrated "Leipzig" Rollers, of which I am the sole importer. All are in magnificent condition, fit for immediate breeding, and cocks in full song, with long, hollow and double rolls, hollow bell rolls, waterbubble runs, soft roulades, sweet, silvery trills, bell, harp and flute notes, etc., etc., and are guaranteed entirely free from Titlark or any other harsh notes whatever, prices, cocks in full song, 7/6 and 8/6 each; Schoolmasters, 10/- and 12/6 each; hens, guaranteed same strain, 3/6 each. I have also received a few special "Seifert" contest Rollers, in full song. These birds are exceptionally soft and mellow in song, and excel in the hollow bell, deep bass, and shaking rolls, and among them are birds which have formed part of contest winning teams this year in Germany, prices, cocks 15/-, 17/6 and 21/- each; pure Seifert hens of same strain, 4/6 each. Anyone desirous of improving their stock, or of securing a Schoolmaster of the purest song, should try one of these contest birds, as nothing finer has ever been imported into England at double my price. The following few testimonials will prove quality of my birds:—"12, Bantling Old-row, near Annfield Plain, March 7th. Sir,—Roller arrived safe, none the worse for his journey, although it is snowing heavily here. He sang half an hour after arrival, and is a clinker. Thanking you for way you packed it. Yours, B. McKenna." "6, Long-lane, Dublin, March 4th. Sir,—I am pleased with Roller, which arrived safe, I think it only right that you should know that I tested him side by side with other Rollers that cost three times the price, and he is by far a better bird than any of them. He started singing within ten minutes of arrival. You certainly deserve to be better known. Yours, M. Hopkins." "Bermuda Cottage, Warren-rd., Guildford. Sir,—Rollers arrived safe. I am more than pleased with them. Thanks for sending such good songsters and straightforward dealing. Yours, T. Moore." "5, Branch-st., Higher Ince, Wigan. Sir,—Birds to hand. I thank you very much for the way you treated me. I went to station as you advised me to, and when I got there I could find neither stationmaster nor porter, but I could hear my bird singing packed up in the office, and he has sang ever since. Yours, W. Kaye." "15, Opposite Ashbrow Mills, Bradford-rd., Huddersfield. Sir,—Received bird safely on Saturday. He is a most splendid Roller, of excellent quality. His voice is quite rich and mellow. Thanking you for same. Yours, W. Tinker." "1, Fort-st., Roath, Cardiff. Sir,—Received bird quite safe, and am pleased to state I am quite satisfied, and will tell my friends where I bought it. Yours, J. Thomas." "Barrow-in-Furness. Sir,—Roller arrived safe. Many thanks for such a splendid bird. He commenced singing directly I put him in another cage; he is also singing splendidly while I am writing to you. I shall give you another order shortly, as your birds are as good as the advertisement. Yours, John Williams." "Harryville, Ballymena, Ireland. Sir,—Roller arrived safely, and commenced singing directly. Allow me to thank you for kind treatment and honest dealing, and I hope to circulate the quality of your Rollers in this district, as I am perfectly satisfied. Yours, Frank Falls." "138, Brettell-lane, near Stourbridge. Sir,—The Leipzig Roller I had from you a few weeks ago is a splendid bird, singing his lovely notes night and day. Thanking you for prompt attention. Please send following. Yours, J. Hill." "1, Albion-place, Pontnewynydd. Sir,—Please send me following. I am pleased to say the Roller I had from you last year is a splendid bird, and much better quality than I had from a prominent dealer for almost double the price. Yours, S. Plaisted." "27, St. Helens-rd., Dorchester. Sir,—Have instructed Editor to pay you deposit. In one word, the bird is excellent. Many thanks. Yours, Hy. Batchelor." "Dinnington. Sir,—Birds give every satisfaction. My friend is very fond of the cock bird, he is singing all day long. Yours, Wm. Kenny." "2, Hill Cottages, Killiney, co. Dublin, Ireland. Sir,—Please send following. The Bandmaster you sent arrived safe, and I am well pleased with him. Yours, J. Colclough." "28, Sussex-rd., Ford, Devonport. Sir,—I had a Bandmaster from you in December, 1905, and am glad to say that his song is in perfect condition still, singing day and night. Yours, W. Davis." "3, Commercial-row, Kirkstall, Leeds. Sir,—I am well pleased with the Seifert contest master you sent. He is singing nicely. Please send hen to match. He is such a sweet singer that I am going to try and breed a few like him this season. Yours, W. Watson." "Ashleigh House, Pocklington. Sir,—Roller arrived safely, and I am very pleased with him. He sings nearly all day, and I thank you for quick despatch. I shall certainly deal with you in future. Yours, A. Dunwell." "85, New Village, Creswell, near Mansfield. Sir,—Bird to hand and I must say he is best Roller I have ever had, and I can assure you that you will get my future orders. Yours, J. Brewster." "Victoria Building, Hilistown, Bolsover. Sir,—I have had three Rollers from you, and am satisfied with all. Please send another Bandmaster, also hen to match. Yours, J. King." Later Mr. King again writes: Sir,—Received Bandmaster and hen in pink of health, and am pleased to say am highly satisfied with them." "Inglewood, Heyes-lane, Alderley Edge. Sir,—Roller arrived safe and began to sing within half an hour. He is the sweetest songster I ever heard. No approval is needed with such birds as these, as they are what you represent them to be. Yours, G. Birken." Please note all testimonials are entirely unsolicited, and full name and address is given, so that any sceptical person may make fullest enquiries. All birds are sent safely and warmly packed with food and water, entirely at my risk, on full week's trial, either on receipt of Cash, or CAGE BIRDS deposit system, and cash refunded in full if birds fail to prove entirely satisfactory. So confident am I that these Leipzig Rollers are absolutely best strain on the market that I cordially invite any person to have one on week's trial, and one from elsewhere at any higher price, test them side by side, and unless mine is far better at less money return it, and I will refund everypenny of their money. I claim to be largest Roller retailer in United Kingdom, and it is the sheer merit of these birds that has gained for me this enormous trade.

W. GORE, DIRECT IMPORTER,
131, GOOCH STREET, BIRMINGHAM.

WHOLESALE AND RETAIL.

Mr. Pairman, 82, Strathmartine-rd., Dundee, writes: Messrs. Paterson, Reddie, Anderson, etc., all of us are very well satisfied, your birds being much better trained and more sweet and richer in tune than any we had before. If anyone can give you satisfaction it is Miss Storey who has many thousands of unsolicited testimonials open for your inspection; read one or two of the many received last week.

32, Etruscan Street, Etrurie. March 14, 1908.—Received birds quite safe, in splendid condition. I am highly pleased with them; you don't see many Yorkshires like these. Thanking you for the straightforward way you have dealt with me.—G. Kaine to Miss Storey.

Underwood, Notts. March 13, 1908.—I received bird alright, and I am sure you will have more orders from here. My friends are so satisfied, like myself, are highly pleased. I have seen a good many but not one to equal what you sent. I am writing Editors to tell them how highly satisfied I am.—A. Taylor to Miss Storey.

19, Vine Road, Sheffield. March 14, 1908.—Received birds all right, and I am more than pleased with them. I thank you very much for treating me so well.—T. Lister to Miss Storey.

Gas Works, Frodsham. March 14, 1908.—Received birds in good health, and am highly satisfied with them. Many thanks for your kindness.—F. Parlin to Miss Storey.

West Gate, Tickhill. March 13, 1908.—Received birds all right, and am very pleased with them; my friend is also highly satisfied with those you sent him. In fact, they all are grand birds, especially at the price.—F. Glasby to Miss Storey.

P.S.—I am sure to give you the same satisfaction if entrusted with your orders.

Neat Travelling Cages 3d. each extra. **All Canaries carriage paid to your door** on 7 days' approval at my risk. New Illustrated Price List of Birds, Cages, etc. 1d. stamp for postage. Illustrated Price List of Birds, post free.

Miss E. L. STOREY, BIRD SPECIALIST.

CROWLE, DONCASTER.

Buy of me. I will send you any bird on my list and you can keep it for A WEEK ON TRIAL and you may deposit cash with Editor of "Cage Birds" if it is exactly what you wanted. Nothing could be fairer. PLAIN TALK:

I have received thousands of flattering Testimonials, but I have not the time at my disposal to copy same for newspaper adverts., and prefer to give customers the benefit of the expense that a few columns of testimonials would cost to insert.

Large Descriptive Bird Price List Free on application.

E. TAYLOR

Bird Specialist

3 & 7, Thornton Road, BRADFORD.

(Only Address in Bradford.)

HUDSON CHAMPION YORKSHIRES.

are what you want if you want to breed your own winners, bred from or related to winners at most of leading shows, Bradford, Windhill, Shipley, Lalsterdyke, Palace, etc. I have a few pairs in clears, ticked, marked, colour-fed and natural colour cocks, 8/6, 10/6, 12/6; hens 6/-, 7/-, 8/-; pairs matched to breed winners at 10/6, 12/6, 15/-, £1; cold room bred and kept ready for breeding. I have received scores of testimonials for this strain, three days' approval. I desire no man's money who does not get satisfaction; stamp reply.—Hudson, Confectioner, Thackley, Bradford.

CHAMPION YORKSHIRES.

Important Notice. — If you want long, slim, straight, upstanding Yorkshires, with feather like silk and in the prime of condition, write or call and see the finest and largest stock in London; every cock bird in full song, and on six days' approval. I have them in all colours. Yellow cocks, 8/6, 10/6, 12/6, 15/6, buff cocks 8/6, 10/6, 12/6 Yellow hens, 4/6, 5/-, 5/6, 6/-, buff hens, 4/-, 4/6, 5/-, 5/6.—Note the address, Wm. Shaw, 97, Essex rd., Islington, London, N. Five doors from Cross-st. All cars stop at Cross-st.

THE NOTED PARAGON YORKSHIRES.

Having won the much-coveted £21 Yorkshire Challenge Cup, 1908, for the fourth time, is ample proof that the "Paragon Strain" is what the name implies, viz., the best of its kind the world can produce. I am the only exhibitor that ever won this valuable trophy outright, namely in 1903-4-5. I did not compete the two following years to allow others to come to the front. In 1906 I secured the Cinnamon-marked Trophy, and in 1907 I won the "Amalgamated Yorkshires," 25 guinea Challenge Trophy. In two successive years at the Crystal Palace my birds were awarded 13 firsts, and other prizes, including about 20 cups, medals, and specials, such a record has never been equalled by any other firm or fancier of the present day. The above are incontrovertible facts, and are not wild, exaggerated statements of advertising bluff and bounce to catch the inexperienced fancier. My birds come to the front year by year with the same regularity as one day follows another, thus proving beyond question that pedigree breeding is the royal road to success, as blood is bound to tell. I have bred and sold more noted winners during my career than any other firm. One client alone who had all his birds from me, won in his first season 65 specials and prizes. Further comment would be superfluous. I have for disposal some of the best that money can buy for length, style, position, and quality they cannot be excelled. Cocks, hens, or matched pairs to breed the best, prices reasonable; three days' approval; stamped address for particulars.

W. H. SHACKLETON,
South Bank House, WIBSEY, BRADFORD.

IT IS NOT THE PRICE YOU PAY

BUT THE VALUE YOU GET,

for Quality according to Price is the only

TRUE TEST OF CHEAPNESS.

Inferior and badly matched Birds are dear at any price. I assert that I am in the position to give you

UNAPPROACHABLE VALUE

in Every Variety and for every purpose, as cannot be obtained elsewhere whatever claims others may make. I have the Birds all in my possession. Give me the opportunity to send on approval and put the above statement to the test for "Actions speak louder than words." I am not giving you ancient history nor ancient undated Testimonials, but what is occurring every day and what I am prepared to do every day at the time of year. The name of W. Rudd is ancient I admit but it has stood the test and will bear all the tests that can be put to it, I trust. It is better than all the "masks" which, though they may continue to be worn, cannot hide what is behind them. It beats me entirely that some people never can read between the lines, however great the spaces.

Read but a few more up-to-date opinions and note their significance:—

94, Greenfield, New Tredegar. March 14, 1908.—Kindly forward a tin of Eggertine. I am glad to tell you your Asthmarine has cured the Yorkshire cock. Thanks for your wonderful medicine.—F. J. White to W. Rudd.

The Lodge, Northallerton. March 11, 1908.—The four breeding cages and four pairs of birds arrived in good order this morning. I am very satisfied will write you again when I require more.—J. Short to W. Rudd.

36, Pulteney Road, S. Woodford, Essex. March 11, 1908.—Pair of Canaries and breeding cage arrived quite safely. I am very pleased with them.—W. Shepherd to W. Rudd.

Verbal Testimony.

156, Beds Burn Road, Jarrow-on-Tyne. March 10 1908.—The crestbred cock to hand. I am delighted with it. Just the bird I wanted, and is verbal testimony to your judgment. I won't forget "Rudd" when wanting another.—J. D. Young to W. Rudd.

Leighton's Square, Aylth. March 1, 1908.—Just a note to let you know I got the birds alright, and am more than satisfied with them. The hen is worth the money alone.—J. Dair to W. Rudd.

20, Victoria Road, Ashby. March 11, 1908.—I got the bird safe and I am well pleased with it. I started to sing before it was in the house half an hour.—G. Bowskill to W. Rudd.

Marchington, Uttoxeter. March 9, 1908.—I beg to acknowledge safe receipt of Canary, cage and [illegible]. Am very pleased with everything. Thanking you for liberal treatment.—T. D. Hewitt to W. Rudd.

Near Minerva Inn, Essington. March 9, 19[illegible] I have received the birds safely. Thanking you for such good birds for the money.—C. Jones, to W. Rudd.

Marshal's Wick, St. Alban's, Herts. March 9 1908.—I received the crested hen last Friday, safe, and I am very pleased with it.—R. W. Cooper to W. Rudd.

The Lodge, Havering Park, Havering. March 9 1908.—Birds arrived safe; very pleased with them they are a nice pair for the money.—A. Bearman to W. Rudd.

Pleased with choice.

19, Newmarket Road, Taunton, Ashton-under-Lyne. —March 10, 1908.—The York cock came to hand early this morning in the pink of condition, and commenced to sing immediately he was put in the cage. I am extremely pleased with your choice.—P. Smith to W. Rudd.

576, Rutherglen Road, Glasgow. March 6, 1908.—The three birds you sent me arrived safe and in good condition. I am highly satisfied with them, and shall recommend you to my friends.—J. Paterson to W. Rudd

Expecting good value.

21, Church Street, Fleetwood. March 10, 1908.—The three Norwich hens arrived this morning in splendid condition, and I think they are exceedingly good value; thanking you for same.—R. Wilson to W. Rudd.

2, Lawn Cottages, Union Road, Lincoln. March 15. 1908.—The hen arrived quite safe, and in first-class condition. Thanks very much for sending me one so good. In the future I shall always trust to your own selections, should I want any more birds; I know I could not do better.—J. A. Miller to W. Rudd.

5, Melville Road, Forest Road, Walthamstow. March 10, 1908.—The bird arrived safe, and sound, in the pink of condition. I am very pleased with it, and think it worth the money.—A. W. Watkins to W. Rudd.

Lyndcroft, Colchester. March 11, 1908. — Many thanks for sending the Yorkshire cock, which pleased me very much. I hope to come to you again when I require more.—A. T. Clarke to W. Rudd.

139, R.F.A., Bulford. March 12, 1908.—The birds to hand, quite safe. I am very pleased with the pair. I think they are grand for the price charged. —H. Green to W. Rudd.

1, Alma Place, Cowley Road, Oxford. March 11 1908.—I think it only my duty to thank you for the Grey Parrot which I had a year ago. I am pleased to say it is in the best of health and I am proud of it. I have had 7 before from different people, and I could not get one to live. I am pleased I sent to you, as it has turned out a regular beauty, and a better mimic you could not have if you paid £5 for one. I would not part with it for any money. —Mrs. Emanuel to W. Rudd.

1, Providence Cottages, Whitcleafe, March 11, 1908.—I received the bird quite safe, and I must say it is the best bird I have ever bought at the price.—R. Browning to W. Rudd.

Castle Villa, Castle Street, Ongar. March 12, 1908.—The light muling hen arrived safe, and gives every satisfaction. Thanks for prompt attention.—H Childs to W. Rudd.

Bosberry Terrace, Station Road, Boldon Colliery. March 13, 1908.—I received the Norwich hen, and was well pleased with it. Thanks for your straightforward dealings.—J. Tracey to W. Rudd.

115, North Street, Belfast. March 13, 1908.—Birds arrived safely this morning, all in good order. Many thanks for prompt dispatch.—J. Houston to W. Rudd.

Know where to get quality.

The Aviaries, Knighton. March 14, 1908.—Bird to hand this morning in the pink of condition. It is a fine bird, and I am well pleased. I know now where to get quality from for future wants.—W. Meyrick to W. Rudd.

75, Dempster Street, Greenock, N.B. March 10, 1908.—Birds arrived in fine condition. Thanks for fine pair you sent. The cock is a beauty.—J. Lee to W. Rudd.

19, Lower Keyford, Frome. March 10, 1908.—The birds arrived quite safe. I am quite satisfied with them. In fact the cock is worth what I paid for the pair.—R. Thorne to W. Rudd.

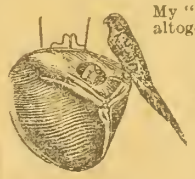
BOOKLET FREE.

Finest Talking Parrots. I only deal in Parrots that will make first-class talkers; no rubbish. I am willing at all times to send my Parrots on four weeks' trial and three months' talking guarantee. Why? Because all my Parrots are young, strong, and reliable. My lifetime has been spent among grey Parrots, both at home and abroad. I guarantee every customer every satisfaction. Grey Parrots are my special fancy. I have trained them, know their wants, and can give every purchaser a bird that will please him in every way I can supply grey talkers, not thinkers, that will say almost anything, at reasonable prices. Before you purchase a grey or green Parrot, send for my Booklet, entitled "Talking Parrots." All my birds are sent on four weeks' trial, at my risk. Send postcard for catalogue.—Mrs. Forster, Princes Park Aviaries, Violet Street, Liverpool.

C. A. LUER.

Telephone, 7504 Central, and at 32, East-st., Walworth-rd., London, S.E.



My "Improved secure" husks are altogether different to any other advertised. Not one year, but for 16 years they have been acknowledged unequalled for successfully rearing Budgerigars Competition and comparsion always increases their popularity. Principa Zoos and parks in the Kingdom use them. "Cage Birds" says they are "far superior to the old husks." "Feathered World" says "undoubtedly the new husks are far superior to the old." Exchange and Mart" says "they are very superior to the old style which often fall to pieces." They have distinct advantages, and are absolutely unbreakable. Price 4/6 dozen. Smaller quantities 5d. each. Instructive pamphlet, entitled "Budgerigar Breeding," free on application. Superior Cockatiel box nests, 1 6 each. **HARPER, Adelaide Villa, Dudley Road, WOLVERHAMPTON.**

Cokernut Husk Nests.

Having received a superb cargo of 35 000 Husks the largest and best I ever saw, I can dispatch all orders same day as received. Satisfaction and success are assured when you use nests of my manufacture. **"The Unbreakable"** Cokernut Husk nest for Budgerigars, etc; Small 2/-. Med. 4/-. Large 6/- doz. Sample Set, carriage paid 1/3. **The Cosy**, Cokernut Shell nest for finches, etc. Small 2/-, Med. 4/-, Large 6/- doz. Sample Set 1/3, carriage paid. **The Ideal**, Box nest for Cockatiels, Parakeets &c, 1/-. Superior make and varnished, etc. 1/6 Every user praises this nest box. Trade terms on application

PEARSON. Wholesale Cokernut Merchant, GREENWICH MARKET.

HARRIS.

PARROT PROBLEM

solved. For full proofs send postcard at once for my large book, "Parrot Prattle," now containing 168 pages. This is the most wonderful book ever offered free of all charge to all Parrot fanciers. (This "Parrot Prattle" is registered copyright, and all infringers and imitators will be proceeded against). It contains hundreds of testimonials from all parts with full names and addresses, many interesting facts, and gives valuable advice and hints to all Parrot buyers Full details of our original system of selling Parrots on four week's trial, at our risk, which we were the first to introduce. We sell Parrots of all descriptions on four weeks' trial, at our risk, before settlement. Cheapest and best in the Kingdom, and any Parrot sold by us, and not giving full satisfaction, will be exchanged any time within twelve months. Remember we lead and others try to follow. Write to other dealers as well as us, and judge for yourselves. Lists of Parrots for sale and above book post free on receipt of postcard

Ltd., Box 72, 161, Westminster Bridge Road, London. Established nearly a century.

PARTICK AND DISTRICT C.B.C.

Usual monthly meeting and show of hybrid and muling pairs were held in the Joiners' Hall, Partick, on March 12th. Mr. Graham presided over a good turn-out of members. Entries came up to those of previous years, and quality was good. Mr. A. Wilson judged, and his awards gave every satisfaction.

HYBRID PAIRS (9): 1, 4, McLintock; 2, 3, Gow; vhc, Graham; hc, McRobbie; c, Noddings. GOLDFINCH CAN (6:) 1, Gow; 2, Noddings; 3, Brown; 4, vhc, McRobbie. LINNET CAN. (4): 1, Graham; 2, Kidd; 3, Miller; 4, Brown. SISKIN, ETC., CAN. (6): 1, Gow; 2, vhc, Graham; 3, Kidd; 4, Miller; hc, Brown. GREENFINCH CAN. (7): 1, Gow; 2, Webster; 3, Graham; 4, McLintock; vhc, Miller; hc, McRobbie; c, Noddings. A.O.V. MULING PAIRS (2): 1, Gow; 2, Miller.—J. HENDERSON, Secretary.

LANCASTER PRIMROSE C.B.S.

An open show for pairs matched for breeding was recently held under the auspices of the Lancaster Primrose Cage Bird Society at the Park Hotel. An excellent committee, with Mr. S. Mulliner as chairman and Mr. W. Brown treasurer, had the arrangements in hand, and the exhibition of a collection of very fine birds. The Norwich class, with 22 entries, was particularly strong; the judges experienced great difficulty in selecting the winner the quality, size, shape, and colour of the exhibits being excellent. In the Any Other Variety class, Mr. Roberts, of Blackpool, was a clear first, the wonderful crest bred cock, which has won many prizes at the shows, and is said by many to be the best of its particular breed, being well supported by its partner, a beautiful hen. The Selling Class was remarkable for the number of good birds, many of which were claimed. The judges were Messrs. W. Mundell (Bradford) and W. Ferguson (Lancaster), and their awards gave general satisfaction. Altogether the show was a very successful one. Mr. H. J. Brown carried out the secretarial duties with much ability.

NORWICH: 1, spl, 3, Dr. Herd; 2 and two spls, S. Mulliner; 4, Winn and Hinde; extra 4, Winn and Hinde, and Bayley and Wilkinson. A.O.V.: 1, spl, 3, C. Roberts; 2, W. Walsh; 4, J. Hampshire. SELL. (30s.): 1, H. J. Brown; 2, C. Roberts; 3, spl, Winn and Hinde; 4, T. Procter. Winner Novice special, Mr. Sewell.

A FEW EXPRESSIONS OF APPRECIATION.

I was greatly surprised to find one of my birds having the honour of being illustrated in the ANNUAL, writes Mr. T. Taylor, the secretary of Gateshead C.B.S. The bird in question is a crest-bred hen, and is a winner of several prizes. She is bred from my old favourite crest-bred cock, "Edward VII." (she somewhat resembles him), and a green crest hen, both grand show birds. Accept my best wishes for your paper and the ANNUAL, as they provide a budget of splendid information for fanciers.

I beg to thank you and your clever artist, Mr. Norman, writes Mr. G. F. Adamson (Kilmarnock), for the pleasant surprise I got, on opening my copy of CAGE BIRDS ANNUAL, to find a sketch of my Crest hen which took 1st prize at the Scottish National Show. She was bred by me in 1906, and out of eleven shows she has to her credit, ten 1st and one 2nd. prizes. A few of her wins are: 1st and Scottish Crest Club gold medal for best Crest bred 1906, City and County of Perth; two 1st City of Glasgow; and two 1st Kilmarnock.

Allow me to thank you for the very pleasant surprise you gave me. On receiving my CAGE BIRDS from my newsagent, I found the picture of my sensational Crestbred cock on the front page. It is very life-like and reflects great credit on your artist, Mr. Norman. I also thank him for his splendid drawing. This bird has taken first and special for best in show at the three largest shows, viz., the Crystal Palace, Scottish National and Gateshead shows. It stood first in the pair class at Lancaster on Feb. 22, and there were quite a lot of fanciers from all parts who kept coming in with a copy of CAGE BIRDS in their hands, to compare the living bird with the drawing. Everyone gave Mr. Norman the greatest praise, for the drawing is life-like to a feather and one and all seemed delighted and well compensated for their journey. Some said it was well worth a day's journey to see such a splendid specimen. I tried to buy a few copies of CAGE BIRDS on the way from Blackpool to Lancaster, but failed, as every shop and bookstall had sold out in good time and not one was to be got.—C. Roberts (Blackpool).

I have to thank you and Mr. Norman for the clever and life-like representation of my winning Siberian Goldfinch, writes Mr. L. J. Arrighi (Edinburgh). It may be of interest to give its doings on the bench last show season. Its first outing was the Glasgow City show in the middle of October, when the bird was hardly finished, and it there received 3rd. prize, and into the bargain a nasty fright, which it never got the better of all the season, and which caused it to be at times rather unsteady, more especially when confronted with strangers lifting the show box, poking at it with pencils, and all manner of ways and means to get what they thought a proper look at it. Its next shows were the Welsh National 1st, Glasgow and West of Scotland 1st, Perth 1st, Dundee City 1st, Kilmarnock 1st, Gateshead 3rd (in a mixed small foreign class), Broxburn 1st, Scottish National unnoticed, for some reason for which I was unable to account. The Palace, H.C., admitted by Judge Swaysland the best bird in the class, but put back for being unsteady. I only moulted him last year from a wild bird, and still have him; at present he is in an open cage and as steady as a rock. If, with another moult he looks no worse than he did this last season, and I can get him steady in the show box, I expect he will be further heard of on the show bench.

CLUB REPORTS.

GRIMSBY C.B.S.

The members held a most interesting meeting in the Club-room, Forester's Hall, on March 7. We had a most encouraging muster. The business included matters concerning our open show, the affiliation to the C.B.U., and the appointment of Mr. Nightingale as our delegate. Mr. Clews opened a discussion on the 'Rearing, Feeding, and Breeding of Birds," which proved to be most useful. It had to be adjourned until the following meeting.—HARRY EMERSON, Hon. Sec.

BURY AND DISTRICT C.B.S.

Monthly meeting was held at headquarters, in the Textile Hall, on Mar. 10. There was a good attendance. Instead of the customary lecture a "pair show" was held, and members had an opportunity of exhibiting what they considered suitable pairs for breeding purposes. Entries were not confined to any particular variety. The Rev. R. P. Hudson (president) made the awards:—1, spl, Fortman; 2, spl, Turton; 3, Clark; vhc, Jamieson; hc, Brough, c, ten. A vote of thanks was tendered to the president.—F. E. HOLDEN, Asst. Sec.

ROCHDALE O.C.

There was a large attendance of members at the Club Rooms of the Rochdale O.C. on March 4th, to hear a lecture on "The Management of Canaries," which was read by the Secretary. The young members seemed very interested and asked a large number of questions, after the reading, amongst which were the following: Which was the best kind of nesting material? How many nests should you get from a valuable pair; How to keep red mite away; when to wean the young; how to prevent sweating the young; slipping perch; which was the best to give to the young, whole egg, or only the yolk; and which is best way to give rape seed, boiled or raw. The questions were answered in a very satisfactory manner and a pleasant evening was brought to a close at about 11 o'clock with a vote of thanks to the reader and also one to the chairman, Mr. J. Naden.—J. BUTTERWORTH, Sec.

WEST OF SCOTLAND N. AND. B.F.C.M.B AND F.B.A.

Annual general meeting was held on March 7th in Nelson's Hotel, Glasgow, Mr. T. A. Boyd in the chair. The minutes were read and approved. The financial statement was also submitted, and was considered satisfactory. The following alterations were made in the rules, viz.: That the annual general meeting be held on the first Saturday in February, and that in future all the british birds and old birds must be one month in the possession of the members before being eligible to compete at the annual show. The office hearers for the ensuing year were elected as follows:—President, T. A Boyd; vice-presidents, Messrs. W. Hutcheson, and J. Lawrie; secretary and treasurer, G. Smart; committee, Messrs. J. McNicol, C. Hunter, J. Montgomery, J. Strawbridge, A. Muir, G. Henderson, J. Lappin, J. Crawford, and J. Anderson; auditors, Messrs. T. Thomson and J. Young. The following new members were enrolled: Messrs. Butcher, Cooper, Hutcheson, Symington, and Douglas. The first monthly show of British birds will be held in conjunction with our next meeting on April 4th, at 7.30 p.m., in the Templars' Hall, Ingram-street, Glasgow. Class 1, British Goldfinch; 2, Greenfinch; 3, Siskin or Redpoll; 4, Linnet; 5, Bullfinch hen; 6, Goldfinch, Foreign. The judging competition was won by Mr. James Anderson, with 21 points. Mr. Hutcheson was runner-up with 17 points.—GEO. SMART, Secretary.

MORRISTON AND DISTRICT C.B.S.

To commemorate the last successful show, a social evening was spent at headquarters, the Woodfield Coffee Tavern, on February 29th, and a presentation of an oak writing desk was made to the secretary. Mr. S. M. Powell wished all success to the M. and D.C.B.S. Mr. S. Lewis seconded this. An excellent repast was served, and Mr. Powell (chairman) proposed a vote of thanks, which was seconded by Mr. Sam Morgan, to Mr. and Mrs. Hopkins for the excellent way in which they catered. Mr. Tom Phillips was proposed as a member by Mr. T. Hopkins, seconded by Mr. D. Jeremy. Mr. Hopkins announced a new vice-president in Mr. Williams, manager of the Capital and Counties Bank. Mr. E. M. Evans expressed his pleasure that he joined the M. and D.C.B.S. He was glad to say that they at Swansea had done very well, but were not to be compared with this society. Mr. Hopkins, treasurer, in making the presentation, said he felt very proud of having the pleasant duty to perform on behalf of the members, commenting on the businesslike way in which the secretary had carried out his duties, especially as both secretary and members were novices at the work. Mr. D. Jeremy, secretary, responded to this. "I appreciate your kind gift of a writing desk," he said, "and when you asked me what I would like I decided on this, as it would be the means of assisting me in my secretarial duties, and I shall think of your kindness when using the same. When a meeting was called here last year I did not attend, thinking that all officials would be selected that year, as I had no intention of taking any kind of office. I attended the second meeting, when I was honoured with your confidence. A lot of hard work has been done, and as a member of a now defunct society in the town I had experience as a committee man. I knew exactly the position, and when I took this office I was bent on bringing the society to a successful issue. We have over £18 to the good, and are thus in a very fine position for our show. This result has not been achieved by myself, for I have to thank you all for assisting me. There are Messrs. Harding, Williams, W. N. Morgan, W. Wilcox, A. E. Taylor, A. C. East, D. M Powell Harry Lewis, and others; in fact, all of you. I think we have not exhausted the area available for working up this society and with your co-operation this year again I think we shall be able to add to our balance. Two of our worthy vice-presidents have intimated their desire again to act as such, and their donations will always be available when working up a cage birds' show." Mr. A. E. Taylor (Swansea) said he hoped that some of their members would do the same for them. Mr. Sam Morgan remarked that he was very proud of being a member of such a good society, and hoped they would hold meetings oftener to encourage other Fanciers [illegible] then made a few remarks on the general management of Canaries. He [illegible] rearing between 50 and 60 youngsters. He thought it was always advisable to pair up about March 17th, if the weather permitted, and that he studied the weather as much as anything. If the weather was not fair, he did not pair up until the beginning of April. After the pairing, and when the first egg was laid, he thought it advisable to take it out and replace a dummy instead; also the second, and when the third was laid he replaced them, leaving the cock and hen for five or six days. He then took the cock out. But if he found him mischievous in any way he would take him out sooner. He never took any eggs out of the nest until they had been sitting for 16 days. He always used the yolk of an egg for the young until they were three days old, and then added biscuit gradually until he gave it as usually advised. With the backward hens in feeding he generally put a pinch of maw seed over the egg food. If the hen sweated her young, he generally gave her a little magnesia in the drinking water in the morning. At 21 days old, if they were on the perch, it was time to put them in a nursery cage, for the old ones to finish feeding through the wires, and place the nursery cage so that the old ones could not pluck them. Mr. Evans then had quite a lively time, for many members took part in questioning him. How did he colour his cages, etc.? He first sized and then enamelled them. What did he think of salts for sweating hens? He always used magnesia, as they were not so liable to catch cold. What was his reason for using biscuit in the egg-food instead of bread, as some of the members were under the opinion that the biscuit would swell in the crops of the birds? Mr. Evans said that bread was more of a watery nature, and not so readily mixed with the egg, and that the birds required their food firmer and of a dryer nature. As a green food he always used cress, but never gave any until the young ones were three days old. Mr. Harding quite agreed with Mr. Evans's method of rearing young, only that he preferred using the bread to biscuits, for the reason that he could rear larger birds on the bread. Mr. Kirby said he always soaked the bread first and then rinsed the water out, and found it preferable to biscuit. Messrs. D. Jeremy, W. E. Morgan, D. M. Powell, and H. Lewis were the chief questioners. A vote of thanks was passed to the chairman.—ALBERT E. EAST, Assist. Sec.

PUDSEY, STANNINGLEY AND DISTRICT O.S.

A very successful meeting and washing exhibition was held on March 5th. Mr. Cruise (Bradford) gave us his method of washing birds for exhibition, which proved to be both instructive and interesting. After he had put two or three birds through the wash, several of the members tried their hands at it, and did very well indeed. The meeting was held specially to arouse some interest in the Fancy, and to try and secure new members. The result proved very satisfactory, three new members being enrolled. Meetings are held on the first Wednesday in each month.—J. BUTLER, Sec.

HARTLEPOOLS C.B.S.

The annual meeting was held on March 11, Mr. Williams in the chair. All the office-bearers were re-elected, with the exception that Mr. Williams, treasurer, is now assistant-secretary and Mr. Mevnell chairman of committee. Two Nest Feather shows were arranged for June 13 at West Hartlepool and July 25 at Hartlepool. Mr. T. Hill (Thornaby) will judge both shows. After a discussion it was decided to leave the final selection of judge for open show in the hands of the secretary, with certain recommendations from the meeting. A hearty vote of thanks was passed to the secretary for his services to the Society since its inception. After Mr. Woodhead had responded, the meeting, which was of a very pleasant and harmonious character, was brought to a close. Our Society is now open to all. Fee, 1s. entrance, and 4s. per annum subscription, payable half-yearly. All are welcome.—E. WOODHEAD, Hon. Sec.

NORTH SHIELDS AND SOUTH SHIELDS C.B.S.

The Society held a splendid meeting on March 4, at their headquarters, Gregg's Cafe, Laygate Lane, and were delighted to see one of our members from a distance, who was accorded a right hearty welcome. We have fixed on July 29 for holding our First Feather Show. Mr. Gilbespy (Gateshead) has been selected and has consented to place the cards. This year we have added a few British Bird classes, to give those members who only keep this class a chance of airing their stock, and at the same time helping to make a better turnout as regards numbers. There was one item on the agenda paper which caused some anxiety to not a few of our members, although no one seemed to think of attaching any importance to the report which has been so indiscriminately set afloat, viz., that a certain member had been guilty of purchasing a bird from another member, and showing it at our last year's show in members' classes as having been bred by himself as per rule. This business was left over from the previous meeting, owing to one of the members concerned being on the sick-list and unable to attend. Now the matter has been gone into, and a decision given of entire satisfaction and confidence in the member against whom this charge was made. In the light of all the facts it was proved to be a deliberate falsehood, and now that confidence and harmony reigns we give a hearty invitation to all Fanciers to join hands with us. There is no radius limit. Twelve new members have joined this year.—WM. DUKE, Secretary.

NORWICH PLAINHEAD C.C. OF IRELAND.

The first annual general meeting was held in the Avenue Hall, Garfield Street, Belfast, on February 27. Mr. John Cummings, President of the Club, occupied the chair. The first business was the adoption of the balance-sheet, which showed a good working balance after paying all expenses for the year. We have also to our credit for Cup Fund, after purchasing two silver challenge cups and also two gold medals, a sum of £7 5s. 6d., with several promises to be fulfilled. At this stage the Chairman, in a neat little speech, presented Messrs. Tate and Carson each with a cup, and also in the same way a gold medal. These gentlemen having suitably replied, the election of officers for 1908 was then proceeded with. Messrs. Barclay and Teasey were appointed scrutineers, and after the ballot papers were counted Mr. Barclay announced the result as follows:—President, Mr. John Cummings; vice-president, Mr. John Thompson; secretary and treasurer, Mr. Jas. Stewart; committee, Messrs. J. Carson, J. Wilson, Wm Gray, Wm. Tate, Wm. Teasey, W. R. Ross, S. Bamford, J. Barclay, W. Connell, and Joseph Lavery. Provincial, Messrs. Jas. Osborne, C. J. Mulligan, J. J. Cloke, and Major W. J. Trotter. There were also two notices of motion to be dealt with; first, a proposed new rule that this Club do not grant patronage to Societies holding shows unless they guarantee to pay prize-money within fourteen days, and also that Societies must distinctly state in their schedule the exact number of entries to secure full prize money. The second proposition was to delete the Crest section from the Club on account of there being no competition for this section this season as far as the Club was concerned. The movers of these resolutions found ready seconders for them, and after several had expressed their opinions on them, they were passed unanimously. It was also proposed, seconded, and passed that we hold a show in connection with the Club this year; the date has not been fixed yet.—JAMES STEWART, Hon. Secretary, 359, Donegall Road, Belfast.

AYR AND DIST. C.B.C.

This newly formed club held their second monthly meeting in Good Templar Hall, on 9th March, C. W. Paterson, President, in the chair. The annual subscription was fixed at 2/6 and the radius at 10 miles, which takes in Troon, Prestwick, Arubank, Maybole, etc. Fanciers desirous of becoming members are requested to send names to Secretary, at 144, Prestwick-rd. It was decided to hold our first members' show in Wallace Tower Hall, on 28th March, at 2 p.m. Judge, Mr. P. McQuiston. Fanciers invited.—CHAS. C. IRVINE, Secretary.

SUNDERLAND C.B.A.

The fortnightly meeting was held on March 14 to discuss alterations of rules, etc. A good number of members turned up, and we had a splendid meeting right through. We also had a table show of Yorkshires (single birds for novice), a special prize, a good copper kettle, being given by Mr. J. M. Walker. The birds were judged by Mr. J. T. Clarke of Sunderland. Mr. H. Taylor won the kettle, securing first and second prizes, and Mr. T. Smith third and fourth. We hope to see bigger attendances at future meetings.—JOHN COPELAND, Assist. Sec.

CITY OF BIRMINGHAM C.B.S.

Second annual smoking concert was held at the Crown Hotel on March 11. The President (Mr Griggs) very appropriately referred to the Hanstead disaster, and advised the Society to give £1 1s. towards the "Daily Mail Fund," which proposition was carried unanimously, the President adding £1 1s. personally. On the termination of a song, "The Miner," sung by Mr. Enser, a collection was made by those present, realizing £1 1s., bringing the total contribution of the Society up to £3 3s., which the treasurer (Mr. J. Harvey) has handed over to the "Daily Mail Fund." An interesting programme was rendered during the evening by several artistes. At the close a vote of thanks was accorded to the chairman.—H. C. WILKIN, Hon. Sec.

CITY AND SUBURBAN A.C.B.

Meeting at headquarters, on March 9th, Mr. A. C. Burn was in the chair. Mrs. Martin, P. Adamthwaite, H. Robbins, and R. Brownlie, were elected members. Result of ballot for judges for the various shows: Finch, F. Turnber, 44 votes; Young Bird, J. Robson, 44; Annual, J. Payne, 35 (Canaries), and G. E. Weston, 43 (British). A vote of thanks was accorded Mrs. Pile for the presentation of an exquisite shawl for the Finch Show, and to Mr. J. Porley for a handsome silver-plated teapot. The Pair Show balance-sheet was read and confirmed. As the growing business of the Association does not leave adequate time for questions to be asked after lectures, and with a view to commencing at the proper time, Mr. Whelder gave a notice of motion that the ordinary business be suspended at 9.30 p.m. on the occasion of a lecture. A lecture was then given by Mr. J. Robson entitled "Breeding and Exhibiting." Some questions were asked by Messrs. A. C. Burn, F. Easterling, W. Page, A. W. Curtis, A. S. Wheller, and F. Lathlaff.—V. WYNN, Hon Sec.

SCOTTISH METROPOLITAN OPEN DERBY O.A.

A meeting was held on February 29th, a good gathering of fanciers being present. This association has now been constituted as an open Derby. There are to be ten classes, namely: Scotch Fancy, eight; Belgians, two. Each member has the privilege of exhibiting ten birds, one in each class, or not more than two in any one class. Before any member can compete, he must have paid his annual subscription, the amount being three shillings, on or before May 31st. This also gives him free admission to show, including judging. There are two cups for competition, one in each section, which have to be won three times, not necessarily in succession, before becoming the absolute property of a winner. Those fanciers who have won these cups at any former exhibitions have the wins standing against their names still to count. All birds are to be of that season's breeding, and must have been bred by the member. The funds, less working expenses, are to be divided into forty cash prizes. A meeting, of which further notice will be given, is to be held on September 12th for booking of birds, and the officials specially request all members who live outside Edinburgh and Leith to have their entries forward by that date. The show will be held on September 26th, 1908. The association has been fortunate in securing Mr. C. R. Drysdale as president, and Mr. William Thurston, sen., as vice-president. Both are very well known in the Fancy, and their names will carry considerable weight. They, with myself, have agreed to give their services entirely free for the benefit of the Association. We extend to fanciers who breed these birds a cordial welcome to membership, and solicit their united support.—J. R. MEIKLE, Sec., 51, Lothian-road, Edinburgh,

HALIFAX O.S.

Members turned up in good numbers on March 14th to hear Mr. W. Cruise (Bradford) lecture on "The Pairing, Breeding, and Rearing of the Yorkshire Canary." Friends were also present from Mirfield, Wakefield, etc. Mr. Cruise dealt with the subject in a very instructive and satisfactory manner, after which several questions were put to the lecturer, and ably answered. A hearty vote of thanks to Mr. Cruise brought a very pleasant evening to a close. The season has commenced with very good prospects, 10 new members having been enrolled. Our syllabus for 1908 comprises monthly shows, lectures, washing exhibitions, and judging competitions, and novice washing competitions.—April 4th Yellow cocks show; May 2nd, Buff cocks show; June 6th, lecture on colour feeding; July 4th, exhibition of Canaries in first feather (the commencement of a series for which the society will give valuable prizes for most points); August 1st second first feather exhibition.—J. F. THACKRAY and H. WHITAKER, secretaries.

ROCHDALE GOOD INTENT C.B.S.

The Society held their monthly meeting on March 4, and after a good discussion on the subject of the clashing of our show with Blackburn and Preston shows, owing to the latter having altered date, we had a good evening on extempore speaking. Several good questions were put to the meeting, and these created a good discussion amongst members, almost all taking part. We have decided to have a ramble on the last Saturday in March, meeting in Town Hall Square at 2 p.m.—SAM M. CLAYTON, Hon. Sec.

QUEEN'S PARK AND DIST. C.B.A.

At the meeting held on Mar. 5, Mr. C. A. House gave a very interesting and instructive lecture, the subject being "The Bird Room." The lecturer, in his opening remarks, said so much had already been said about the birds, that he should confine his remarks to cleanliness. He tried to impress on his hearers the value of ventilation. His remarks were listened to by a good muster of members, who much appreciated them. The lecture was followed by a number of questions, which the lecturer answered to the satisfaction of all. A hearty vote of thanks to the lecturer, who suitably replied, brought a very pleasant evening to a close.—J. C. BIRCH, Hon. Sec.

UNITED KINGDOM LIZARD CANARY SOCIETY.

What might be called the first general meeting of this society, held at the Howard Arms, Glossop, on Mar. 17, was a great success, fanciers from all the surrounding districts turning up in force, and over twenty members being present. The rules, prepared by a sub-committee, were very carefully gone through and carried, after which the election of officers took place, the President to represent Glossop, and a Vice-President to represent each district where meetings are to be held. President: J. E. Chippendhaw, Esq.; Vice Presidents, Messrs. J. Hampshire to represent Oldham; W. Cundiff, Macclesfield; Barker Clegg Manchester; and F. J. Green, London and the South. Committee, Messrs. Fisher, Fuller, Dickinson, Smith Senior, Cooper, J. Dewsnap, Harrison, Thompson, Anderton, James Wrigley, and J. Smith; Treasurer, W. Cawton, Esq.; Secretary, F. Greig, Hurst Lodge, Glossop; Auditors, Messrs. H. Harrison and J. Cooper. The next meeting will be held at the Spinners Arms, Oldham, the date of which will be published in due course.—FRED. GREIG, Sec.

SCOTTISH BRITISH BIRD AND MULE CLUB.

The club held its annual general meeting at 142, High-street, on March 7th, the president, Mr. Dandie, in the chair. The secretary read minutes of previous meeting, which were approved of. Balance-sheet was unanimously adopted, showing a credit balance of about £3, the trophy fund now being close on £6. This speaks well for the members. The following are the successful winners of the medals:—Gold: Messrs. L. J. Arrighi, J. Brown, J. Pendright, R. Bard, Duncan and Logan, A. Buchanan, W. C. Cunningham, P. McQuiston, and T. Brown; silver: Messrs. G. Brown, C. Douglas, W. Cullen, J. Ovenstone, G. Henderson, W. Mather, J. Livingstone (2), W. Miller (2), W. Paton (1), M. Craig (2), and C. S. Crockatt. The president referred to the death of an old and respected fancier, Mr. Samuel, and it was agreed that the secretary write a letter of condolence to Mrs. Samuel. Election of office-bearers resulted as follows:—President Mr. A. Cochrane; vice-presidents, Mr. L. J. Arrighi, and Mr. R. Bald; secretary and treasurer, Mr. A. W. Watson, with salary, namely, £2, same as in previous years; committee, Messrs. J. Brown, W. Paton, J. Livingstone, R. Watson, jun., T. Erskine, J. Winter, and A. C. Dandie; auditors, Messrs. R. Cray and E. G. Wright. It was unanimously agreed that any club asking for patronage must have as their judge a member of this club. It was also agreed that all foreign Goldfinches and Bullfinches compete for the medals. A discussion on uniform cage resulted in "no finding," and it was agreed to take no step in this matter meantime. A hearty vote of thanks to the retiring chairman and secretary brought a very enjoyable meeting to a close. All information may be had from A. W. Watson, secretary, 8, Commercial-street, Leith, which address secretaries will please note.—A. W. WATSON.

LANCASHIRE AND LIZARD F.A.

The general meeting of the Association was held at Old Boar's Head, Manchester, on March 7. There was a fairly good muster of fanciers, representatives being present from Oldham, Stockport, Macclesfield, Middleton, Shaw, Rawtenstall, Glossop, etc. The enthusiasm shown in the endeavour to keep the old, original Society at the top was very pleasing, one and all being eager and willing to do their share. There is evidently a better time in store for both varieties. One prominent feature was the promise of a good number of new members. Mr. Oliver gave his report and balance-sheet, and many congratulations were offered him for his work on the Society's behalf. After the balance-sheet and report had been passed, the appointment of officers for the ensuing year was then proceeded with. President, Mr. John Garner; vice-presidents, Messrs. John Dewsnap, Jno. Vickers, Jos. Hampshire, and Barker Clegg; treasurer, Mr. John Swalwell; committee, Messrs. Wm. Lawton H. Oliver, Charles E. Fisher, John Hamer, Ben Buckley, Nelson, Dickinson, Ollerenshaw, Smith, Buckley, Wynn, and Lee. There was a unanimous proposal that Mr. H. Oliver again take the office of secretary. Mr. Oliver, however, said that he must, for business reasons, resign, as he had not the necessary time to properly devote to the work. After repeatedly asking him to reconsider his decision, the members were reluctantly forced to accept his resignation. Mr. Nelson, in proposing that the resignation be accepted, spoke in a feeling manner of his regret at having to do so. Mr. Rukin seconded, and also acknowledged the services of Mr. Oliver. Mr. Oliver has always acquitted himself well, in what is, at the best, a thankless office. Mr. Rukin was then proposed as secretary, and was unanimously elected. A little surprise was then sprung on Mr. Oliver, as Mr. John Vickers proposed that we make a collection, its object being to purchase something as a token of the respect in which our late secretary was held by his fellow-members. The idea was well taken up, and a handsome collection was the result. It was, however, decided to leave the fund open until our next meeting and give other members a chance of subscribing. The next meeting of the Association will be held on April 4 at the Old Boar's Head, Manchester, when after the business has been transacted, the cups and medals will be presented. The presentation to Mr. Oliver will also be made. The rest of the evening was concluded in a sociable manner. We are hoping to see some new faces present. Intending members will meet with a hearty welcome.—JOHN RUKIN, Hon Secretary, 44, Hall Carr Road, Rawtenstall, Lancashire.

BELGRAVE (Leicester) AND DIST. F. AND F.S.

A table show of breeding pairs, Canaries A.V., was held at the usual meeting on March 3rd. Mr. W. Shepherd judged, and his awards gave every satisfaction. Result: 1st and 2nd, Hurst; 3rd, Coddington; all Norwich. After judging, Mr. Shepherd kindly gave answers to all questions asked him, and birdy members of our society no doubt picked up some very useful items of information.—W. H. RILEY, Secretary.

BRISTOL C.B.S.

Usual monthly meeting held at headquarters, on March 4th, when there was a large attendance of members present to listen to Mr. C. E. Brown's lecture upon the feeding and rearing of young Canaries. The lecturer had every item at his fingerends and dealt with the subject in a businesslike manner. Needless to say such valuable information was well received and all present were delighted with the lecture. At the next meeting night, April 1st, Mr. Manley will lecture on Mule and Hybrid breeding.—W. H. MANLEY.

STRATFORD & EAST LONDON F.S.

The annual general meeting was held at Workman's Hall, Romford-road, Stratford, on Feb. 27 The Secretary presented the balance sheet for 1907, which was unanimously adopted. A vote of thanks to the retiring officers was proposed by Mr. W. H. Collings, and carried. The Chairman, on behalf of himself and the committee, replied. The Secretary, Mr. S. L. Sheldrick, briefly reviewed the work of the past year, and also eulogised the services of the committee. The following officers were elected for the ensuing year: Committee, Messrs. Austin, Day, Scott Filby, Benn, Graves, Smith, Wase, Reeves, Mallett, Littleton, Lewis, Ruggles, Mummings, Love, Pounceley, and Croxon; Hon. Sec., S. L. Sheldrick, 86, Grove-road, Bow, E.; Asst. Sec., Mr. T. May; Auditors, Messrs. Mason and Jayne; Treasurer, Mr. Barret.—S. L. SHELDRICK, Hon. Sec.

PENDLETON AND SALFORD O.S.

Meeting held March 9th at Chapel-street Congregational Hall, when there was a very good attendance of members and friends. Messrs. Wellings and Cowgill were elected judges for our next open show on December 11th and 12th next. We had a table show of Yorkshires and Norwich, with a judging competition which aroused a great amount of interest among those present. YORKS.: 1, Atkinson; 2, 4, Jackson; 3, Fish. NORWICH: 1, Jackson, he winning silver medal for most points Mr. Durnford won silver medal for judging competition given by the chairman, Mr. C. W. Lythgoe. Mr. McCann judged.—W. JACKSON, Hon. Sec.

WIBSEY AND DIS. C.B.S.

The monthly meeting took place on March 7, when ten more members were enrolled, making a total of nearly 70 members. We are now in the proud position of being represented by the full complement of delegates on the Yorkshire Union. After the business of the meeting had been concluded, Mr. Fred Allan (Cleckheaton) gave a lecture on the "Yorkshire Canary," about forty of the members being present, and at the conclusion he answered the various questions. At the close a hearty vote of thanks was given to Mr. Allen for the very able manner in which he had given his lecture. This was the first of a series of lectures, debates, etc., arranged for the current year. March 14, members' show, birds staged 3 p.m. prompt; March debate on "Cinnamon Marked Canaries," opened by Mr. James Hartley.—FRED PICKLES, Assist.-Secretary.

THE SCOTCH FANCY CANARY NATIONAL DERBY C.A.

It will be within the recollection of readers who perused the report of this society's annual show in September, 1907, and of those who visited the exhibition, that it was a great success. The National Derby were honoured by having the best turn-out of young Scotch Fancy Canaries, and the executive have been so much encouraged by it that they enter upon the current year's work with confidence that breeders of the Scotch Fancy Canary will back up their efforts and make 1908 a record for membership and quality of exhibits. The society has done much for the Scotch Fancy Canary, and can do more. The members who have joined are: Messrs. Wm. Hart (Paisley), H. Crawford (Walmsburgh), Councillor Hagg (Oakley), R. Wright (Greenock), A. Porteous (Glasgow), and Thomas Smith (Glasgow). This is the first instalment, and we hope fanciers will enable us from this time onward to publish a substantial list weekly until a record is reached. Tickets have been sent to last year's members and we appeal to them to do their best to sell on ticket and retain the other and thus be the medium for the disposal of two each. The membership fee is 3/-, which includes entry money for eight exhibits as well as admission to the show. The society is conducted on excellent lines. The Secretary will be pleased to supply further particulars to any gentleman who can assist the development of the Association. Thanking, in anticipation, all who help the cause of the Scotch Fancy Canary.—T. SMITH, Secretary and Treasurer, 56, Minard-rd., Crossmyloof, Glasgow.

ACCRINGTON & DISTRICT C.B.S

At our meeting held on March 12th we had a very instructive and interesting washing exhibition by Mr. W. Dormer, of Rishton. Six birds were provided, the object being to show the skill required in handling the birds while washing them. The six birds were exceedingly dirty ones, being kitchen songsters, and the dirt required a lot of removing. The operator said he did not wish to disturb the feathers, and with skilful handling, and the free use of soap and water, Mr. Dormer succeeded in materially altering the complexion of a pair of Norwich. While he was washing the birds he made a few remarks on the position and handling of them during the process. Mr. A. Hirst then showed us his method of washing. He immediately seized a big Buff Yorkshire, his favourite variety, and with a few remarks about his method and the kind of brushes he used, he commenced the task of making an almost black bird into an almost white one. Mr. Godley was the next to tub a bird. He commenced with a Crested Canary, and gave us an idea how to dress and prepare the Crest for exhibition. There was not much difference in the methods and styles of the operators, but while Messrs. Dormer and Hirst used two brushes, Mr. Godley required only one brush, using a large sponge with which to do the rinsing. A little discussion followed. Other business was then taken. The name of Mr. H. Walsh was proposed for membership, and he was accepted as a member. Mr. D. Bentley (Great Harwood) will give a lecture on British birds at our next meeting, April 9th. The meeting was brought to a close by the passing of a vote of thanks to Messrs. Dormer, Hirst and Godley for their instructive lessons on washing for exhibition. There was a good attendance of members and friends.—JAS. W. PHILPOTT, Sec.

[Please write on one side of the paper only.—ED.]

LOANHEAD AND DISTRICT C.B.S.

Meeting held Mar. 14, in the Masonic Hall, Mr Wm. Nelson, Vice-President, in the chair. The following new members were enrolled: Messrs. J Carson (Easthouses), A. Jardine (Polton), G. Harper (Bonnyrigg), and D. Small (Loanhead) Medals were next considered, and it was agreed that there be a medal for each section. The Secretary then stated that he had got cup from ex-Bailie Frichael, to be competed for as members thought best. It was decided, however, to leave this matter over till the June meeting. New members will be enrolled up to the end of March.—W. B. SMART, Sec.

GREAT HARWOOD AND DIS. C.B.S.

At a meeting held on March 9 at headquarters, Town Gate, Mr. D. Bentley, the well-known British bird fancier and judge, gave a lecture on "Soft Bills." He first dealt with our favourite singing bird, the Thrush, its manners and ways, and how to feed it. The Missel Thrush, Skylark, Woodlark, and others came in for consideration, not forgetting that beautiful songster, the Nightingale He had even gone so far, he said, as Epping Forest so that he might listen to its song. Questions were invited and answered, and the lecturer was accorded a hearty vote of thanks, which closed a pleasant evening.—GEO. WADDINGTON, Hon. Sec.

NEWCASTLE-UPON-TYNE C.B.S.

Usual monthly meeting held on March 5th, in Lockhart's, 65, Grainger-street, when 62 members were present, Mr. J. Currah, chairman, presiding. A letter was read from the secretary of the C.B.U. We also decided to leave the date of our First Feather Show over till next meeting, April 2nd. There were 14 new members enrolled, this making 150 members on our books. Mr. J. Currah having promised to give us a "trip to the Scottish National" by four members of our society, we were all eager for him to get a start, and right well did he do it. He first of all gave us the ride in the train, not forgetting the yarn told by J. R. S. about the trouble his wife and he had had to cook some oatmeal sausage when they were staying in Edinburgh. He also told us of the sights to be seen. Then he gave a graphic description of the show, how it was managed, and how the exhibits were staged. After he had answered questions on same, a vote of thanks was accorded to him. At our next meeting Mr. Crawhall will give us a lecture on the Yorkshire Canary, when intending members will be welcomed. Subscriptions are now due. The following are the names of new members:—Messrs. T. Hopkinson, E. Clarke, J. Patterson, T. Marshall, Thos. Floyd Seely Bros., Milling, F. Sanderson D. Young, Whitfield, G. Brown, J. Passmore, and W. Ryles.—CURRY and HUTCHINSON, Secretaries.

NATIONAL BRITISH BIRD AND MULE CLUB.

Result of voting on birds proposed to be added to the club's list. 119 voting papers sent out, 47 returned.

Crested Tit	35 for,	12 against.

Price only 1/- post free.

Publisher, "Cage Birds," 154, Fleet Street, London, E.C.

THE SHOWS.

(See also page 301.)

BRIGHTON F. AND F. S.

The annual show of pairs was held on March 5th in the Lecture Hall, the new headquarters of the society. The hall was too small for the very numerous company present. Mr. Walter Swaysland judged. The secretary is Mr. F. Perrin, to whom much credit is due for his able management of affairs.

YORKS.: 1, Mrs. Eyles, fine pair of clears; 2, Pearson, nice pair; 3, Danbridge, very typical pair. NORWICH: 1, Gibbs, a good pair of clears. A.O.V.: 1, Gibbs, a good clear Border hen and a nice even-marked cock; 2, Mrs. Eyles, pair of Crests. HYBRID PAIRS: 1, Gibbs, Goldfinch and Canary; 2, Pearson, Redpoll and Canary. BRIT.: 1, Hollamby, nice Chaffinch; 2, Gibbs, good Redpoll, not much to choose between them.

CROOK AND DIS. C.B.S.

Monthly meeting and table show held on March 7 at Horse Shoo. There was a good attendance of members. Messrs. Brown, J. Hutchinson, and Smith were proposed for membership. It was decided to hold a Nest Feather Show in July, the prize money to go towards a cup for members at our open show October 17. The judging being finished, the awards were as follows:—NOR. (8): 1, vhc, Atess; 2, 4, Rutherford and Bright; 3, Clough; hc, Hemmingway; c, Toward. YORKS. (3): 1, 2, Adams; 3, Clough CREST OR CB (6): 1, 3, Atess; 2nd Lady Auckland, 2nd at Crystal Palace, 1908; 2, vhc, Rutherford and Bright; 4 Clough; hc, Hemmingway. CAGE BIRD A.V. (4): 1, 2, Rutherford and Bright; 3, Winter; 4, Toward. BRIT. (8): 1, 2, Rutherford and Bright, nice team Hawfinch, Goldfinch, and Greenfinch, leader winning gold centre silver medal for best in show; 4, vhc, Rutherford, Linnet; hc, Clough; c, Hemmingway. CANARY A.V. NOVICE (14): Strong class: 1 c, Clough; 2, Dawson; 3, 4, vhc, hc, Campbell.—WM. RUTHERFORD, Secretary.

SWANSEA AND DIS. C.B.A.

At the headquarters of the society the members held their annual pair show on March 3rd. The number of entries greatly exceeded that of last year. The quality was also excellent, including some well-known winners. One of the special features of the show was the Novice Border class which contained in all 14 pairs. As competition in this variety is so keen at Swansea, intending competitors are requested to beware. Thanks to the efforts of Mr. J. Hocking, show manager, the birds were neatly staged, and in proper order for judging. The judges were Mr. W. J. Jenkins for the Canary section, and Mr. Phil. Jenkins for Mules and Hybrids. The awards appeared to give every satisfaction.

NOR.: 1 and 2, Kirby; 3, vhc, Hitchings; hc, Stock. YORKS.: 1 and hc, Hyett; 2, 3, vhc, and c, A. E. and W. R. Taylor. BORDERS: 1, 3, and c, Hocking; 2, Hammacott; vhc, Evans; hc, Richards. NOV. B. Ford took all prizes.—ALF. HITCHINGS, Sec.

SINGING CONTESTS

LEEDS C.B.S.

This Society held their annual table show of Canaries and British birds at their monthly meeting held on March 7, at Locklart's Cafe, there being 53 birds staged in ten classes. This was considered very good, it being the best held for a few years. It was visited by a large number of unknown Fanciers. Mr. King judged open classes for Canaries and novice British; Mr. Chew novice classes and Open British. Several good birds were staged to fight battles over again, and Mr. Hallet came out on top in open classes, winning first in both Yorkshire and Norwich Mr. King almost swept the deck in open British. He staged birds in faultless condition. The novice classes filled well, especially the British. Mr. Owen, a true British bird Fancier, won first in a strong class with his favourite Chaffinch. A medal to the value of 10s. 6d. is given to the winner who scores most points at this show, first feather, and members' winter show in novice sections and a medal value 7s. 6d. to the runner-up.

OPEN CLASSES: YORKS. (6): 1, hc, Hallet; 2, vhc, Farrar; 3, 4, Cobb; hc, c, Hallett. NOR. (6): 1, 2, Hallet; 3, Stead; 4, vhc, Woof; hc, Stead. BRIT. (5): 1, 2, 3, 4, King; vhc, Fox. NOVICE CLASSES: YORKS, YELL., TKD., ETC. (6): 1, 3, 4, Fowler; 2, Lockwood; vhc, Tales; hc, Triffit. BUFF (6): 1, Tales; 2, 4, vhc, Ireland; 3, Fowler; hc, Triffit. NOR. YELL. (8): 1, vhc, Wilson; 2, Triffitt; 3, Medley; hc, Benje; c, Ireland. BUFF (11): 1, vhc, Lloyd; 2, Birkenshaw; 3, hc, Wilson; 4, Benge; c, Ireland. A.O.V. (1): 1, Wilson. BRIT. (14): 1, c, Owen; 2, Triffit; 3, 4, vhc, Fox; hc, Simpson.—A. WILKINS, Hon. Sec.

LEYTON AND DIS. C.B.A.

The annual Finch show was held at the Leyton Constitutional Club on March 2. The judge was Mr. J. S. Clarke, whose awards were well received. Quality throughout was very good. The hon. secretary, Mr. B. F. Forse, is a very efficient and capable official, and Mr. Forse, jun., ably assisted him in his secretarial duties. The show was a grand one, and the attendance was fine.

GOLDFINCH (12): 1 and spl. Ovenden, grand colour, good blaze, shown in perfect feather; 2nd, 3rd, B. F. Forse, fine size and shape, nice condition; 3rd one of the best in class for blaze and body colour, nice substance; 4, vhc, Marley; hc, Billingsly, c, Forse. BULLFINCH (3): 1, Rowbridge; 3, Hellens, all grand birds. GREENFINCH (7): 1, 3, hc, Hellens, 1st large birds, very shapely, good colour, easy win; 3rd on similar lines, but smaller; 2, 4, c, Marley, staged to perfection, 2nd nice bird, worth its place, 4th same description applies; vhc, Burbidge LINNETS (7): Not a bad one among them: 1, spl. best in show, vhc, Morris Bros., 1st lovely exhibit, size, shape, colour, and pencilling; 2, Ovenden, nice shape and rich colour; 3, c, Wood, big bird, good shape; 4, Marley; hc, B. F. Forse. SISKINS, ETC. (4): 1, 2, Marley two Siskins, 1st nice shape and colour, 2nd well up; 3, 4, Hellens, fine Lesser Redpoll and a grand Twite. A.O.S. FINCH, ETC.: 1, Wood, Hawfinch, grand colour, very steady; 2, vhc, Forse, yellow Canary, equally steady, nice colour; 3, Marley, Snow Bunting, good one; 4, Hellens, nice Bramblefinch. A very fine class. INSECTIV. (LARGE): 1, B. F. Forse, very nice Blackbird well shown unfortunately the only exhibit in class. SMALLER: 1, Morris Bros, Bearded Tit, a perfect picture. HENS: 1, Morris Bros, Bearded Tit, companion picture, a charming lady; 2, Ovenden, Linnet, exception at colour, would be hard to beat by one of her own set and specie; 3, Forse, Linnet; 4, Morris Bros.; vhc, Dalton. FOR. GOLDFINCH: 1 Ovenden, a beauty, perfect feather, not the first win by any means; 2, 3, two nice birds, little to choose between them.

LEICESTER C.B.S.

The result of our table show on March 11th was very successful, some fine birds being on show, including that very fine Goldfinch which has only been beaten once this season, and that time by the Palace winner. If they had both met the Palace winner would have had to look its best to have beaten it, as it was a perfect picture to look at, and was shown in the best of condition. Mr. Judd placed the cards, which gave every satisfaction.

GOLDFINCH, ETC., BRIT.: 1, vhc, Hunt; 2, hc, Seal; 3, Waadby; c, Ride. BRAMBLEFINCH, ETC.: 1, 3, Hunt; 2, Heighton; vhc, Whitmore; hc, Tyler. A.S. PART SEEDEATING BRIT.: 1, Hunt, 2, Tyler. These were two very fine Yellow Buntings, the old one just beating the young one.—J. A. TYLER, Sec

GRIMSBY AND DIS. O.S.

A very successful meeting was held on March 10, at the Hall of Science, Freeman-street, Mr H. E. Stubbs presiding. Twenty-eight members were present. Eight new members were elected, and an honorary member. A pleasing letter was read from Sir George Doughty and Lady Doughty, who expressed their willingness to become patrons of the Society. Sir George Doughty is the President for the ensuing year. It was decided that the annual open show be held at Corn Exchange on October 20 and 21 next, and that the Society again join the C.B.U. Mr. H. E. Stubbs was elected delegate to the C.B.U. At the next monthly meeting on April 7 there will be another table show of British birds, including soft bills and foreign birds. Judge, Mr. W. H. Moore, senr. The Chairman intimated that the Society was in a good financial position, in comparison with many other Societies, having £11 in hand. There was a table show of British birds, when some excellent specimens were exhibited, 12 varieties being represented. Mr. George Dowie judged.

GOLDFINCH: 1, 2, vhc, hc, Way, grand team; 3, Crowston, fine specimen. GREENFINCH: 1, Drinkall; 2, Ellender; 3, Moore, jun.; vhc, Moore. LINNET: 1, 3, Drinkall; 2, Crowston; vhc, A. Sutcliffe; hc, Moore. A.O.S. BRIT. (12): 1, spl, A. Sutcliffe, fine Hawfinch; 2, Sutcliffe, grand Bullfinch; 3, Way, Blackbird in fine form; vhc, Stubbs; hc, Ellender; c, Moore, sen. HYB. PAIRS: 1, 2, Drayton, Goldie and Linnet, and Redpoll and hen Bullie.—MOORE and CROWSTON, Secs.

CITY OF WAKEFIELD O.S.

This Society held their first members' show of the year on March 6, at headquarters, the Crown and Anchor Hotel. Seeing that they are a new Society of only one year's experience, the members are to be congratulated. The quality of the exhibits throughout the show was of high order, and a vast improvement on their first show last year. The entries totalled 80 in thirteen classes, there being some fine specimens among the winners. The Yorks. were a grand lot, some of them having held their own in higher competition. Norwich were a strong class, some grand birds being staged. The British turned up exceedingly well; the Linnet class was very keen, and were very difficult to separate, while the Goldies, Bullies, and the A.O.S. classes were a credit to their owners. Mr. W. A. Cowgill (Bradford) officiated as judge, and his awards were well received. The staging was in the hands of the chairman, Mr. Isherwood, who had the assistance of a hard-working committee and the secretaries, Messrs. Parker and Atkinson.

YORKS. CK. YELL.: 1, 3, Parkes; 2, 4, Parker; vhc, Brown. BUFF: 1, Parkes; 2, Rothwell; 3, 4, Parker; vhc, Sharp; hc, Kilburn. HEN, YELL.: 1, Parkes; 2, Brown; 3, Rothwell; 4, vhc, Parker; hc, Sharp; c, Bengon. BUFF: 1, 3, Parker; 2, 4, Parkes. PAIRS: 1, 4, hc, Talbot; 2, 3, Parkes; vhc, Rothwell. NOR.: 1, 4, hc, Atkinson; 2, Brown; 3, Midgly; vhc, Meadows. HEN: 1, 2, 3, vhc, c Atkinson; 4, Midgley. LINNET: 1, Atkinson; 2, Bengon; 3, hc, c, Walker; vhc, Isherwood. GOLDFINCH: 1, 4, Kilburn; 2, Talbot; 3 Midgley; vhc, Walker. BULLFINCH: 1, Midgley; 2, Bengon; 3, Isherwood; 4, Parker. A.O.V.: 1, 2, 3, Isherwood. FOR. LARGE: Meadows. SMALL: 1, Isherwood; 2, Blakley. SELL.: 1, 2, Talbot; 3, Kilburn. — PARKER, Joint Sec.

ORMSKIRK AND DISTRICT C.B.S.

The annual meeting was held at headquarters (Buck i' th' Vine Hotel) on March 2nd, Mr C. I. Johnson (chairman) presiding over a capital attendance. The following officers were re-elected:—Messrs. C. J. Johnson, chairman; E. A. Walker, vice-chairman; R. Gardner, hon. treasurer; T. H. Tiffen, hon. secretary. The whole of the members to form a general committee. Messrs W. Moss and P. Mawdsley were appointed auditors. The statement of accounts showed a balance of over £3 to the credit of the society, which was stated to be very satisfactory for the first year's work, and considering that two shows have been held. Rules were revised, and other monthly business transacted. Four new members were accepted, raising the membership to over thirty. A table show of breeding pairs was also held, some excellent birds being staged, especially in the Norwich and Hybrid classes, the latter section containing some very likely pairs for the intended purpose. Mr. Charles Houlton (St. Helens) judged.

YORKS.: 1, Gardner; 2, vhc, Walker; 3, Lewis. NOR.: 1, spl for best pair, 3, vhc, Tasker; 2, Lindsay; hc, c, Hesketh. A.O.V.: 1, Tiffen (Borders); 2, Walker (Borders). PAIRS FOR HYB. BREEDING: 1, Moss, Greenfinch-Bullfinch; 2, Lewis, Goldfinch-Canary; 3, hc, Parr, Goldfinch-Greenfinch and Goldfinch Canary; vhc, c, Withington, Chaffinch-Bramblefinch and Greenfinch-Canary. Immediately after judging, Mr. Houlton kindly gave some useful and interesting hints on the mating and breeding of Canaries, describing very minutely the type of birds to mate for producing ideal stock. An enthusiastic vote of thanks was accorded Mr Houlton for his advice, to which he suitably replied, and stated that should it ever be his pleasure to again visit the Ormskirk C.B.S. no doubt they would find him a bit more work. The usual votes of thanks terminated the meeting.—T. H. TIFFEN, Hon. Sec.

"Cage Birds" Breeding Cage Labels are a BOON TO BREEDERS.

Neatly printed in sets of twelve, on perforated gummed paper. They can be torn off, and affixed to the cage in a moment, and prevent all confusion in the breeding room. Useful alike to both small and large breeders.

1d. per doz.; 7 doz. 6d., post free

The Manager "CAGE BIRDS," 154, Fleet Street, London, E.C.

JUDGES OF CAGE BIRDS.

The attention of Show Secretaries is directed to the following list of gentlemen willing to act as Judges. Terms for insertion on application.

W. O BARLOW, The Aviaries, Malpas, Cheshire. Judge of Canaries, British Birds and Mules. Terms moderate

TWITTERINGS.

The date of our next show, writes Mr. James Moyes, secretary of the Thornton and Dis. O.S., has been fixed for December 12.

I consider your paper the best advertising medium for anything appertaining to the Fancy, writes Mr. Morten Dodge (Manchester).

I consider your valuable paper, CAGE BIRDS, the best paper going, writes Mr. James Holroyd, secretary of the Great Horton O.S.

We have engaged Mr. J. Kershaw to judge the next Carnarvon show, writes Mr. David Roberts, secretary.

Mr. A. Wellings will, we hear, judge Blackburn show on November 6th, and Pendleton and Salford on December 11th.

Mr. W. Simmonite, of Sheffield, has a Linnet Mule which was hatched on the 4th March, writes Mr. H. Timms.

The Penzance and District F.A. have decided to hold their annual show on November 27th, writes Mr. J. Pearce Sampson, the hon. secretary.

Please thank all who answered my advertisement in CAGE BIRDS, writes Mr. H. Jordan (Oswestry), as they were too numerous for me to answer each individually.

The secretary of the Glasgow and Western Counties Club, Mr. J. H. Adams, requests us to ask members to note change of meeting hour to 4 p.m. at the next fixture.

Fanciers and others in Manchester district may now procure "Avisine" from Messrs. Dutton, Tib Street, Manchester, wholesale or retail, write the Avisine Co. (Millom).

I have read all the fanciers' journals for the last twenty years, and find nothing better for a fancier than CAGE BIRDS, writes Mr. C. Cave (Ellesmere Port).

Mr. F. W. Hamer asks us to request the members of the Greenwich and Deptford C.B.S. to make a special effort to attend the next meeting of the society.

On and after March 25th my address will be 5, Mysore Road, Lavender Hill, London, writes Mr. W. Lilley, secretary of the South-West London C.B.S.

Am pleased to tell you I was successful in my last advertisement. I could not reply to all; thanking them all the same. I wish CAGE BIRDS further success.—J. T. Howie (Bromley).

A brighter, chattier, or more amusing bird publication than CAGE BIRDS it would be impossible to find, writes Mr. G. C. Mallard (Leamington), and your coloured plates are simply perfection.

From our correspondence columns it will be noticed that a meeting has been convened to-day (Saturday) to discuss the formation of a cage bid society for the Shettleston district of Glasgow.

Kindly state that I have now removed from 71, Dover Street, Anderton, to 8, Primrose Street, Scotstoun, Glasgow, where all future communications should be sent, writes Mr. Jas. Ramsay.

We have decided to hold our third annual open show on October 17th, writes Mr. R. S. Black, hon. secretary Darlington C. and B.B.F.A. Secretaries of societies in district please note to prevent clashing.

Your valuable paper, CAGE BIRDS, is very eagerly read by me as soon as I can get a copy on a Friday morning, writes Mr. W. T. Munn (East Sheen), and cannot fail to be of intense interest to all lovers and breeders of birds.

I have been elected hon. secretary, and Mr. J. Parker assistant secretary, of the Burton-on-Trent C.B.S., writes Mr. S. A. Dicken, New Inn, Station Street, Burton-on-Trent. All communications relating to the society should be addressed to me.

The Wolverhampton and Dis. C.B.S. will hold their open show again in the Co-operative Hall, writes Mr. F. Howes, secretary, and Roller Canaries will be staged in a larger room than the one placed at their disposal last year.

Kindly notify my change of address to 13, Atherton Street, Battersea Park Road, where all communications relating to the Metropolitan C.B.A. should be addressed, writes Mr. A. J. Head, the hon. secretary. Any information concerning the society will gladly be given.

A very fine specimen of the Golden Eagle has been shot on Glensone Hill, according to a Dumfries contemporary. It is said to be three years old, and has been forwarded to Mr. W. S. Seton-Karr, London, the sporting tenant.

Kindly thank through CAGE BIRDS all those gentlemen who answered my advertisement, writes Mr. C. E. Brown (Bristol). I had 55 letters and four post-cards, and it's really out of the question to write them all, much as I should liked to have done so.

The first members' show of the newly-formed Ayr and Dis. C.B.C. will be held on March 28th in the Wallace Tower Hall at 2 p.m., when Mr. P. McQuiston will judge. Admission will be 3d.; all fanciers invited.—ADVT.

The Attercliffe and Dis. C.B.S. is having a concert on March 25th, in their club room, at 8 p.m., writes Mr. W. Richinson, secretary, when we hope to see all members, their wives and their friends. We are in hopes of making a few new members.

At the next meeting of the Ealing, Hanwell and District F.S., writes the hon. secretary, Mr. W. Bird, a lecture will be delivered by Mr. C. A. House, entitled "How to succeed in the Fancy." We have arranged a good programme for the ensuing season, and have now six silver cups to compete for.

Owing to my health, writes Mr. A. Ambler, the well-known breeder and exhibitor of the Yorkshire Canary, we have removed from Bradford, to 138, Westminster Road, Morecambe, where we shall be most pleased to see all fanciers.

Writing with reference to a statement made by the sender of a testimonial published by one of our advertisers last week, "Fair Play" sends us an account of purchases made from Manchester dealers, from whom it is evident he has obtained the fullest satisfaction.

We extend a hearty invitation to all fanciers in Birkenshaw, Gomersal, Birstall, Gilderrow, and surrounding districts to join us, writes Mr. J. Smith, secretary of the Tong and Dis. C.B.S. We will be pleased to see any new member on March 24th, at the Holme Lane Hotel, at 7.30 p.m.

Kindly thank all who answered my advertisement in CAGE BIRDS, as I am not in a position to answer all by post, having had over fifty letters up to date. I am a constant reader, and shall know where to always advertise in future.—W. WATSON (Chippenham).

The Wibsey and District C.B.S. is having a debate to-day (Saturday) at the "Horse and Groom" on Cinnamon-marked Yorkshires, writes Mr. E. W. Johnson, the hon. secretary. It will be opened by Mr. J. Hartley, the well-known Cinnamon-marked fancier. Friends cordially welcomed.

I beg to call the attention of the members of the Y.C.C., writes Mr. John Greaves, secretary, to the fact that nominations of officers for 1908—9 must reach me on or before the 31st March. Nomination forms will be found in the centre of Y.C.C. handbook for last year.

The Inverness O.A. annual show is fixed for 25th November, writes Mr. Alex. Urquhart, secretary. Secretaries of shows please note. The Music Hall where our show is held was engaged for 18th November, previous to our application, hence the reason for change of date.

That well-known fancier, Mr. C. E. Silk, of Emsworth, has just received an application for birds from a gentleman, who states: "I will favour you with my patronage, as it was with your birds I started my bird life 20 years ago, when I was successful at the shows in our district." Naturally this communication has given Mr. Silk considerable pleasure.

A donation of 6s. has reached us from a reader in far-away Australia, Mr. S. Stubbings, of Perth, W.A., for the fund which has recently been got together, through our columns, on behalf of Mr. Benj. Spiers, who lost his eyesight under such sad circumstances. This we have had great pleasure in forwarding to Mr. Spiers.

The Highgate, Hampstead and Dis. C.B.S. extends a hearty invitation to all fanciers, writes Mr. W. Reynolds, to attend the lantern lecture on British Birds, by F. Kirkman, Esq., B.A., at 8.30 p.m., this Friday, March 20th, in the Spencer Hall, Spencer Road, Dartmouth Park Hill (nearest station Tufnell Park on the Tube).

At the annual general meeting a large gathering of members expressed themselves very pleased with the result of the past years work, writes Mr. W. Summers, hon. secretary of the Wandsworth and Dis. F.S. Our balance sheet shows a sum of over £4 in hand, and we have two challenge cups value £10 10s. in addition. An excellent programme has been arranged for the coming season.

Many thanks for cheque value 10s. 6d., writes Mr. Fred Hammond (Bradford), prize awarded to me in your recent "Yorkshire competition." I am always proud when I produce a 'winner,' but, in this instance, it is the fact that your verdict places "guid owd Yorksher" in the position of honour that affords me far greater pleasure than any consideration of a personal nature.

Owing to a great many novice Canary fanciers around Oldham (not members of any society) having a desire to see a bird washed, the opportunity is to be provided at the Oldham and Dis. C.B.S. headquarters on March 24th, as we are holding a washing competition then, writes Mr. Fred Steeple, the secretary. All wishing to compete will please bring their own birds. The competition is open to all.

We have received from the composer, Mr. J. A. Douglas (who is a great lover of birds himself, and a reader of this journal) a copy of a charming song, entitled "The Death of a Nightingale." Pretty words by Mrs. W. R. Douglas are given a tuneful and appropriate setting, and musical readers should make a point of adding this song to their music-case. Messrs. Metzler and Co. are the publishers.

The cream of London's British and Foreign Birds, from the Woodpecker and Scarlet Tanager to the Jenny Wren and Australian Fire Finch. Over 160 on view to-day (Saturday) at the Show of the City and Suburban A.C.B., in the Church Institute, 60, Paddington Street, Marylebone, W.; three minutes' from Baker Street (Metropolitan) and Regent's Park (Bakerloo) Railway Stations.—ADVT.

A Treat for Edinburgh.

A lecture entitled "In Bird Haunts with a Camera," with lime-light illustrations, by Mr. J. C. Adam, will be given on March 26th, at the Protestant Institute, Edinburgh, writes Mr. Jas. Winter, secretary of the Scottish National C.B.S. It will be seen the date has been altered from March 25th to March 26th. The lecture promises to be a very interesting one, and I trust the promoters will be rewarded with a good attendance of fanciers and friends. Ladies are specially invited.

SHOW DATES FIXED.

British Bird Items.

The voting of the members of the N.B.B. and M.C. (as given at the last meeting) showed that the majority of the birds it was recently proposed should be added to the club list had been rejected. Only three, the Crested Tit, Hoopoe, and Golden Oriole, had a majority of votes in their favour. The question of a standard show-cage for Hardbills occupied the attention of the meeting for a considerable time, and when we left, at a late hour, no decision had been come to. The "ideal" cage seemed to be thought a combination of the best points embodied in two or three of the designs submitted.

Yorkshire Union Elections.

Just as we go to press we learn that the elections for the various officials of the Yorkshire Union have resulted as follows:—Vice-President, Mr. F. Halliday. Trustees: Messrs. Brotherton and Mitchell. Auditors: Messrs. Armstrong and Holroyd. Secretary: Mr. S. Dean. The President is Mr. John Greaves, who, as Vice-President of the previous year, moves up to this post. The ballot papers returned only amounted to the small total (considering the membership) of 294. Here are details of the voting:—

VICE-PRESIDENT: Halliday, 125; Sunderland, 75; Armstrong, 35; Clarkson, 28; Johnson, 20; Wellock, 12.

SECRETARY: Dean, 170; Mitchell, 55; Hill, 47; Townend, 22

TRUSTEES: Brotherton, 230; Mitchell, 120; Townend, 104; Ross, 98.

AUDITORS: Halliday, 224; Armstrong, 189; Holroyd, 29; Jackson, 55.

Having been elected Vice-President, Mr. Halliday will not accept the position of auditor. Therefore Mr. Holroyd will be associated with Mr. Armstrong.

Through a Bird-room Window.

By the Rev. C. D. FARRAR.

My Brother Aviculturists *(continued.)*

The best way to make friends with a brother aviculturist is flattery. Do you know the method of making a cat settle down in a strange place by buttering her all over? The theory being that by the time she has polished off all the butter she feels at home. Well, how true that may be of the cat I don't know, but it acts perfectly with aviculturists. I apply the butter judiciously. It always proves quite satisfactory, and after a little natural repulsion the process turns out quite successful. I believe some aviculturists are almost as bad as fishermen for walking round the truth. I often think when I read some birdy stories, of the words of Mr. Dooley to his friend Hennessy anent the late Chinese crisis: "The Western civilisation, Hennessy—that's us—is a pretty good liar, but he's a kind of rough-and-tumble at it. How i' th' worruld can we compete with a country where ivery labror's cottage projooces lies so delicate that th' workmen ov the West can't understand them? They emulate th' best iv' our canned lies to deceive people that likes that kind, but for artists they have lies that appeals to a more refined taste. Sure, I'd like to live among them an' find out th' kind of bouncers they tell each other. They must be gr-rand. I on'y know their export lies now—th' sample lies they can't use at home." Aviculturists are prone, when things go wrong, to speak, as David puts it, unadvisedly with their lips. Of course, they are in good company, for did not Moses, the meekest of men, do so? And did not Arego remark to a brother astronomer that he was the biggest scoundrel within the orbit of Neptune? There is a comprehensiveness about that observation that I find extremely soothing.

Aviculturists all like encouragement, but be careful how you give it. There is a right and a wrong way of doing things. Last winter I borrowed our doctor's gardener to prune the fruit trees. The doctor himself came one autumn evening and did one of the trees himself. I asked the old fellow his opinion of the doctor's handiwork. "Well," he said, "maester," thoughtfully removing his pipe from his lips, "nowt so pertikler." The doctor seemed quite hurt when I told him next day! Be careful, then, how you give encouragement.

The "Very Superior" Person.

Sometimes I get a visit from the very superior person. Nothing astonishes him. I feel something like the poor Italian guide in the "Innocents Abroad" when Mark Twain innocently asked if the mummy was dead—and had he been long dead? We are all, I fear, even the best of us, just a little bit glad when misfortune comes to a brother aviculturist. It is mean, of course, but then, there are times when a fellow feels a real enjoyment in being deliberately, stupendously mean! We all like a man the better if we can hang over his garden-wall and tell him that his best friend has cheated him in the matter of that horse he has just bought. Undoubtedly there is something very cheerful in a neighbour living in a glass-house, and undeniably it promotes friendliness. When a man goes to visit a neighbour's aviary, he should be very careful of his remarks. In a certain magnificent shrine in Nikko, above the main doors, are carved in open work three apes, one with his hands to his ears, another covering his mouth, and a third blinding his eyes. The monkeys are those who hear no wrong, say no wrong, and see no wrong. You want to be the same when you go on a visit to a friend's birds. See nothing wrong, say nothing wrong, hear nothing wrong.

Sometimes I see aviculturists forgetting the advice of good Dr. Watts, and letting their angry passions rise, and then I always feel inclined to repeat to them the words of an old French wit, "Ah, messiours, aimez vous les uns les autres, car, si vous n'aimez pas les uns les autres, qui diable vous aimera?" I don't suppose they will follow it, but old age, it has been bitterly said, when it can no longer set a bad example—gives good advice. When I meet a very self-opinionated gentleman, I always feel inclined to remind him that he is not an Œcumenical Council, and that some of his edicts admit of discussion. At such times the words of the immortal Mrs. Glegg in "The Mill on the Floss" seem singularly apposite—"Mr. Tulliver doesn't want to know your opinion nor mine neither. There's folks in the world as knows better than everybody else."

Many and many a time I have longed to impart some wonderful little bit of success to a wondering avicultural world, but I dared not. I thought of the poor Swiss guide that a gentleman brought home to his English place in the West of England. Of the glories of that visit Nils was never tired of descanting, but *not* to his compatriots. "It is no goot me telling dem what I see in England," he ruefully remarked. "dey only fink me a liar." Many a wonderful thing I have done in the bird world I have never told to this hour for fear of the laughter of the Fool. What, by the way, were the three laughters of the Fool? It is a Welsh triad. He laughs at a thing because it is good; he laughs at a thing because it is bad; and he laughs at a thing because he cannot understand it.

There are aviculturists who hold their own settled views and glory in them, and are not troubled by any chance waves of criticism; but for my part I pride myself upon an open mind, and try to follow the philosophical, sane method of sifting out the wheat from the chaff of men's advice. The result is that I wobble—indeed, the result of all philosophical methods would appear to be the same. Aviculturists need continually to be warned not to covet their neighbour's goods. It has always seemed to me that Naboth got more cheer from his tight little vineyard than all Ahab's lands could have given, and it was a sense of this, surely, that first set covetousness in Ahab's heart. The vineyard was small enough to love—just as a woman must be small to be loved rightly, and Ahab watched this lowly Naboth going his ways, content, untrammelled, secure in his passion for his bit of land, a passion which would have been dwarfed by the very splendour of his overlord's dominions. So Ahab reasoned faultily but humanly that if he tacked on this little corner to his own possessions, he would inherit Naboth's great tranquility. Alas! there was no one to suggest he should exchange all he owned for this one plot, nor to tell him that the sterile joy of majesty might well be bestowed for a small holder's fruitful days of land-love and land-bettering. Aviculturists should never be too pleased with themselves, no matter how skilful they are in their own sight. Do you remember in the story of Monsieur Reynard the excuse he gave for gobbling up the poor harmless lamb? Was it not that he looked so fat and contented and pleased with himself? That is the way that smug, self-satisfied people always make me feel. Here is a golden piece of advice, though I don't suppose for a moment it will be followed. Never press your aviaries on others. Nine hundred and ninety-nine people out of a thousand don't care twopence for other people's aviaries, though they all pretend out of politeness to do so, and the thousandth will find his own way to them and will be much happier going round them alone!

I know few things so painful as ignorant but well-meant advice. Some people can never come to see you without telling you what they would do in your case. It always reminds me of what Mr. Helliwell Sutcliffe says of a certain parson "Parson were up here yestere'en, an' he axed me how things were goin'? 'Noan so weel,' says I, an' then parson says, 'Don't be downcast,' says he, 'God tempers the wind to the shorn lamb.' 'Parson,' says I, looking slantways at him, 'did ye ever go in for sheep rearing?' 'Nay,' says he 'I thought not,' says I. Sakes, Mister, it fair raffles me whiles, to hear folk talking o' what they dean't understand." Remember in talking to a brother or sister aviculturist that it is possible to make mistakes. Don't say as Mr. Gladstone once said: "That is my opinion; but I *may* be mistaken." Nemo mortalium omnibus horis sapit. And now I think I will end, or you will be saying of me what Sir Frankland Lewis said of his son whose excellent but very serious book did not suit his taste. "I wish to God that George couldn't write or that I couldn't read."

Chapter IX: Some Necessary Precautions.

Be careful to shut all doors after you. The neglect of this simple precaution has before now cost dear. I know a man who carelessly left a door open one evening, and his cock Turquoisine got into the next compartment; the hen came off to see where he had got to, failed to find her way back to the log, and a good nest of youngsters perished. Another time I had left a door open and a very pretty fight ensued between a cock Barnard and a cock Blue Mountain and when it was over neither was worth very much.

Be cautious as to what grows in an enclosure to which nesting Parrakeets have ready access. Elder seems an innocent, though admittedly a strong-smelling shrub in all conscience; who would dream that a Parrakeet would eat its acrid foliage? And yet a cock Turquoisine of mine did so; and not only did so, but fed therewith a nest of five splendid youngsters, which all died incontinent.

Don't leave pails of water kicking about in an aviary; or you will be sure to find the bird you most value floating head-downwards therein some fine morning.

A catching net carelessly propped up against the wall of a compartment full of birds has ere now claimed its victim, and nothing will atone for the poignancy of anguish when you find a dead bird therein—some days dead—the result of your culpable negligence. The place for a net is outside the aviary, except when in actual use.

Traps and Poisons.

A mouse-trap is intended to catch mice, not birds. Be very careful, therefore, when you set it that the birds cannot get in. I always use the patent German affairs where the mice run up an incline and commit suicide. It seems to relieve one of the responsibility of murder. The trap sets itself, and I have caught in it a dozen mice in one night, when times were good. In setting it I always put the trap behind a slanting board, with the opening in the trap as near the wall as possible, so that only a mouse can get in. When I used to put the trap in the open, the very first victim I secured was a poor little baby Chinese Quail, which was about the size of a bumble bee on legs. But it was too late to weep when I found it. I have been always very careful ever since.

Poison is never employed by me now. I will tell you why. Years ago I used to poison the mice with a certain vermin killer, placed on bread and butter. I was very careful, as I thought, and always pinned the bread to a board and covered it well, so that birds could not get at it. I was not careful enough, however, as the sequel proved. Some mouse must have dragged away some odd piece of it, and it got covered over with dry earth. I never noticed it, but many months afterwards, when I went for my summer holiday, I one morning got a letter from home saying that the two big green Parrakeets were dead (they were Port Lincolns); that they were in the most perfect health the evening before, but were laid dead the first thing next morning. I was further told that the day before they were observed playing with something on the floor. The "something" was the unfortunate bit of poisoned bread. This is why I never now use poison in the aviary.

Aloe fibre is sometimes recommended for nesting material. I used to give it to my birds; but one day I found a poor bird hanging by the leg, and since then I have always used some less dangerous material.

When you are giving water always fill each water-pot as you go along. It is very easy to forget one if you go dodging about, and an empty water-pot may cost you very dear.

(To be continued.)

RARE-FEATHERED BULLFINCH.

This beautiful bird, which has the normal-colored plumage intermixed with cream-colored patches, was exhibited at the Crystal Palace Show by Mr. G. EDWARDS, of Leominster, and secured second prize.

USE OUR PICTURE POSTCARDS.

THE LESSER SPOTTED WOODPECKER.
(Male and Female).
(See Mr. Sandy's Article).

The Woodpeckers in the Field and in Captivity.

By S. A. SANDY.

There are three British representatives of this highly interesting family, the largest and most common being the Green (*Gécinus viridis*), the Greater Spotted (*Déndrocopus Major*), and the Lesser Spotted (*Déndrocopus Minor*), the last-named being the rarest, at any rate in captivity. All the three species are resident and generally distributed in the South of England, but are becoming less numerous, and one might say scarce, in Yorkshire and counties farther north.

The three species are admirably shown in the sketches by that expert bird artist, Mr. Goodchild, who must have studied the birds very closely when making his drawings, and any reader should have no difficulty in recognising a live specimen from them, also the descriptions I am giving further on.

As the name "Woodpecker" implies, the three species frequent well-wooded localities, and I think one of the best places for any London Fancier to get a glimpse of the Green Woodpecker in its native haunts is Ashstead Woods, where I have noticed they are quite common. Particularly is this so in the summer and early autumn, when they may be seen feeding from the ant hills on the outskirts of the wood itself, though, speaking generally, one has to wait until he hears the the loud laughing call and then go very cautiously in the direction from whence the call proceeded. The fancier will, by the exercise of a little patience and the aid of a field glass, be pretty sure to spy the bird busily engaged tapping the bark of some tall tree in search of the many insects concealed in the crevices of the bark.

The Greater and Lesser Spotted Woodpeckers procure their food in a similar manner, but are not so exclusively insectivorous as the Green, for in the winter when insects are scarce, they feed largely upon acorns. In captivity they will eat sunflower seeds and pea-nuts (otherwise monkey nuts), while the Green, so far as my experience goes, will not touch anything but insects, or their substitute in captivity, a good insectivorous food. The Green is known in some localities as the "Yaffle" and also as the "Rainbird" as its loud laughing call is heard most frequently when rain may be expected.

Early in April the Woodpeckers commence to pair up for the breeding season, and to select suitable abodes in which to rear the youngsters. Having selected a likely tree, they commence with their sharp bills to drill a hole well into the centre of the tree-trunk, and running downwards to a depth of a foot or more, enlarging at the bottom of the hole where the eggs are to be deposited. It is not a difficult matter to locate a Woodpecker's nest by the many chips of wood that fall at the foot of the tree in the course of the drilling operations. Sometimes, however, several trees are slightly drilled before one satisfactory to the birds is found. To get a glimpse of the eggs or young, which vary from five to seven in number in each species, is, however, a much more difficult matter, for it is no light task to climb a thick tree-trunk and with a keyhole, or small saw, cut a piece out of the tree-trunk from the entrance hole downwards to the actual nest; so that any reader who contemplates exploring a Woodpecker's nest in the coming season will find he has undertaken no light task.

Interesting Method of Feeding.

There are one or two peculiarities in the species to which I should like to call the reader's attention, the most interesting being the method of feeding. Any one who has had the good fortune to be able to watch a Woodpecker (or a Wryneck) in captivity will have noticed that when taking food it draws a small particle up with the tip of its tongue instead of pecking it up after the manner of the Thrush, and, in fact, all other birds. The tongue is long and covered at the extreme point with a sticky substance, and when the bird sees some small ant or other insect in a tiny crevice in the bark of the tree, it simply inserts its tongue, to which the insect adheres, and by which it is drawn into the bird's bill. It is thus enabled to find an abundance of food it could not otherwise procure, especially during a sharp winter. The tail feathers also differ from those of all other birds, with the exception of the Treecreeper, whose general habits are similar, being very stout at the base and stiff at the end, so as to assist the bird in climbing.

The next point I will draw attention to is the characteristic feet, which differ from those of other birds and resemble those of the Parrot family, having two toes in front and two at the back. The legs are short but very stout, and the sharp claws enable the bird to cling to a bough in any position, and one has only to take a glance at the legs to see that the Woodpeckers do not spend much of their time on the ground.

A Personal Opinion.

Personally, I consider the only species adaptable to captivity is the Lesser Spotted. This must be kept in a very large cage, for it is a very restless bird and hardly ever still; in fact, the proper place would, in my opinion, be an outdoor aviary, which would have to be lined with zinc or the bird would soon peck its way out. Although a small bird, it has an exceedingly sharp and powerful bill. I daresay some of my friends will disagree with me when I say that the Greater Spotted and the Green are not suitable for anything but an aviary, for I know that my friend, Mr. Dewhurst, kept a Greater Spotted Woodpecker in a cage of small dimensions for five or six years. But that I venture to think was an exceptional instance. I do not consider a species whose average cage life does not go much beyond a couple of years or so a very suitable cage bird, and I think that would be about the average length of time the Green could be kept by the ordinary fancier. In any case, a fancier who desired to try his luck should most certainly get a hand-reared specimen of either variety, for I doubt very much if a wild-caught specimen would live.

The Green and Greater Spotted are easily reared, but the Lesser Spotted is much more difficult to manage. The young should be taken from the nest when about ten days old and reared on the very best ants' eggs, soaked, with a plentiful supply of mealworms, beetles (cut up), spiders, flies, and any other live insects. As the birds get on, a little crushed sweet biscuit and yolk of egg should be added; but as soon as the birds can feed themselves, the eggs should be discarded or the birds will develop fits, which is the "beginning of the end," for they get very fat and soon die. The last Greater Spotted Woodpecker I kept was a hand-reared specimen and well over its first moult, and as I subsequently learned had been kept on Lark food, mealworms, and beetles. I started it on a good insectivorous food, the same as I use for Nightingales and similar birds, and in less than a month it developed fits and died.

Another very important item to be remembered is never to put two Woodpeckers in the same cage, no matter whether they be male and female or otherwise, or you will soon have cause to regret your folly. They are very pugnacious, and a playful tap by one on the head of his or her companion is usually sufficient to make it a case of "sudden death."

Tips to be Taken.

As a means of getting some useful hints on the keeping and exhibiting of the Wodpeckers, I paid my friend, Mr. C. T. Maxwell, a visit and found him, as I have done in the past, ever ready to give the readers of CAGE BIRDS the benefit of his practical experience. He has kept all the three species, but his special "fancy" leans towards the Lesser Spotted, of which species he said he had, during the past few years, had numerous specimens.

On one occasion Mr. Maxwell had three charming young ones, all of which turned out to be cocks, and in course of time found their way on to the show bench. He, however, was only able to keep them alive for about two years, by which time the last of the three had died. This has been the average length of time Mr. Maxwell has kept this particular species, and anyone who has had the pleasure of seeing Mr. Maxwell's birds, and the conditions under which he keeps them, will, I feel sure, be satisfied that he will have something to do to go one better with Woodpeckers. On the show bench they scarcely receive the consideration they deserve for the care that must of necessity be bestowed upon them, and these remarks apply equally to the other two species.

Mr. Maxwell has kept the Green with the average amount of success, but found it had a large appetite and required a liberal supply of live ants' eggs to keep it in health. This particular specimen had an unfortunate trick of breaking its tail just when its owner wished to exhibit it.

The Greater Spotted species does not find favour with our friend, for although he has been tempted years ago to keep a specimen, any dealer would have to be exceedingly persuasive to induce him to buy another one. I remember a very nice specimen of the Greater Spotted Woodpecker which Mr. W. H. Valo kept for a couple of years on ordinary insectivorous food and a plentiful supply of mealworms. This particular bird was exceedingly tame and interesting, and had a great liking for ale. It would come to the front of the cage on being shown a glass, and insert its long tongue into the liquid, which it drank with apparent relish.

The Plumage Described.

The plumage of all these species is very attractive; the Green particularly so. The upper plumage of the male is a yellowish green, with a crimson crown and nape, and the underparts greyish green. The lores are black with a crimson patch edged with black on each cheek. The female is less gaudily attired, having much less crimson on the head, and the cheek marks black instead of crimson. The young in nest feather are mottled on the back, and have dark markings on the underparts. It is a large bird, measuring twelve inches in length. The accompanying illustration cleverly depicts this bird.

The frontispiece shows the Greater Spotted Woodpecker, which is some three inches shorter than the last-named species. It is a somewhat pretty bird, though not so gorgeously attired as the last-described. The general plumage is black and white. The male has the upper parts black, the forehead and cheeks white, the nape crimson, the wing feathers barred with white, and the underparts a dingy white, while the vent is red. The female is duller in the markings, has very little red on the nape—sometimes not any—and is a trifle smaller.

The male Lesser Spotted (the large figure shown in the illustration) is very similar to the Greater Spotted species. It has the crown of the head pale crimson and the forehead buff, is barred with white on the back, and is only six inches in length. It will be seen on comparison that while this species has the crown crimson, the larger bird only has the nape crimson, and in *D. Major* the forehead is white, while in *D Minor* the forehead is buff. There are other differences in the plumage of the two birds, but space will not permit of my going too fully into them, and I think the points I have drawn attention to would, apart from the variation in size, enable any fancier to distinguish the one from the other. The young of both the last species have crimson on the head when in the nest feather.

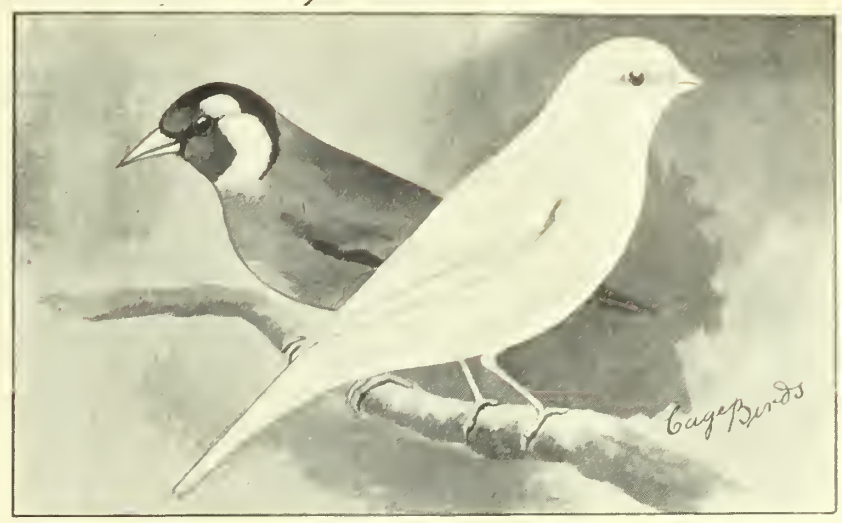
Concluding Hints.

In conclusion, I would impress upon any readers who may feel inclined to keep any of the Woodpeckers, that they must keep them in cages—or aviaries—of such dimensions that the birds can take plenty of exercise. If cages, they should be upon the box principle, i.e., open in the front only, and the height should be about twice the breadth, with a depth of corresponding dimensions to the breadth, say 4 feet high, 2 feet wide, and 18 inches deep. The cage should be lined with thin zinc and fitted on the three sides with virginia cork for the bird to cling to. No perches are necessary or desirable.

The food and water vessels should be so arranged that the bird can reach them without going to the bottom of the cage. There should be a deep draw-board, and it should be kept well covered with sand, which I prefer to fibre or sawdust for these birds. As regards food, ants' eggs (fresh when procurable), dried flies, and, for the two larger species, soaked puppy biscuit passed through a fine perforated zinc sieve, with a liberal supply of live food, would answer well, and for the Lesser Spotted, a similar mixture with a little cream cheese added. The latter item is used with great success, and is strongly recommended by Mr. Maxwell.

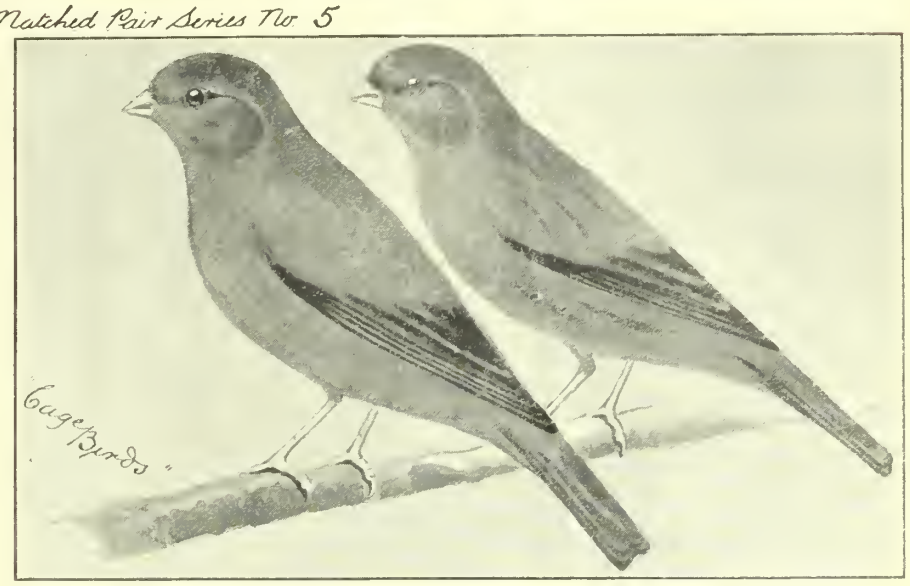
"WHO SAID CATS?"

Matched Pair Series No 7.



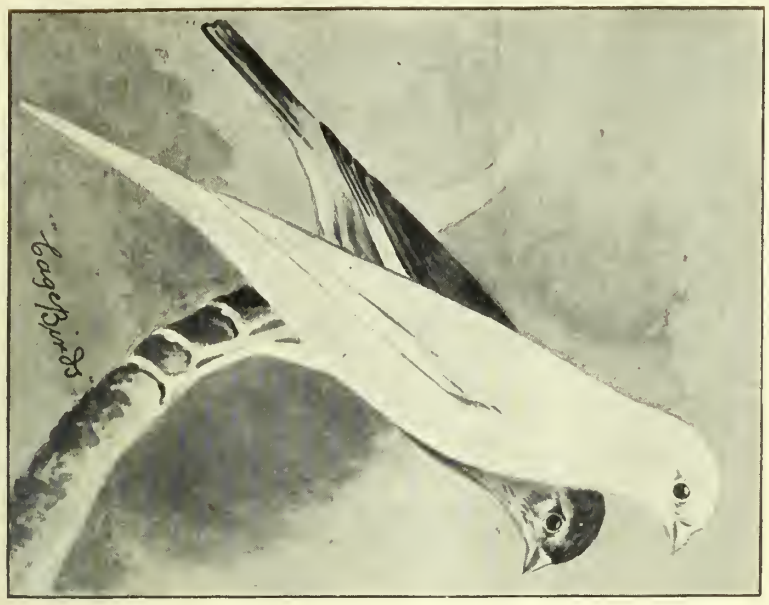
Mule Breeding
Goldfinch. Large richly coloured bird.
Yellow Norwich Hen. Good shape, fine feather.

Matched Pair Series No 5



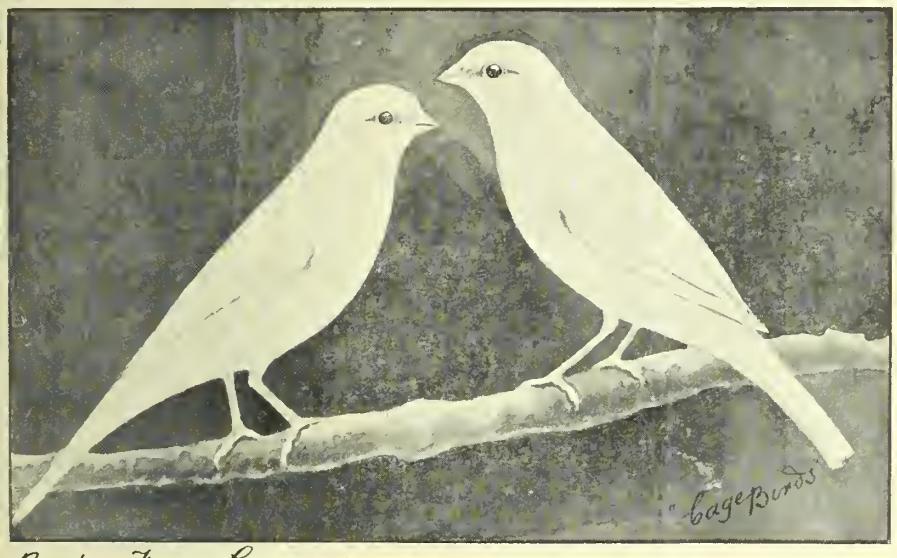
Cinnamon Canary
Yellow Cock. Rich colour but small, slightly marked.
Buff Hen. Good head, bulky body, sound colour.

Matched Pair Series No 8



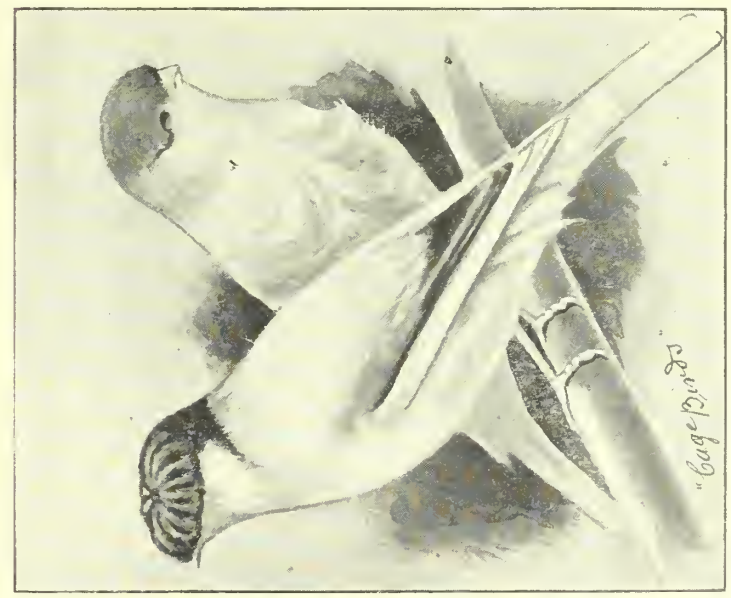
Mule Breeding
Linnet. Large, steady bird
Yellow Yorkshire Hen. Large,
good shape and feather.

Matched Pair Series No 6



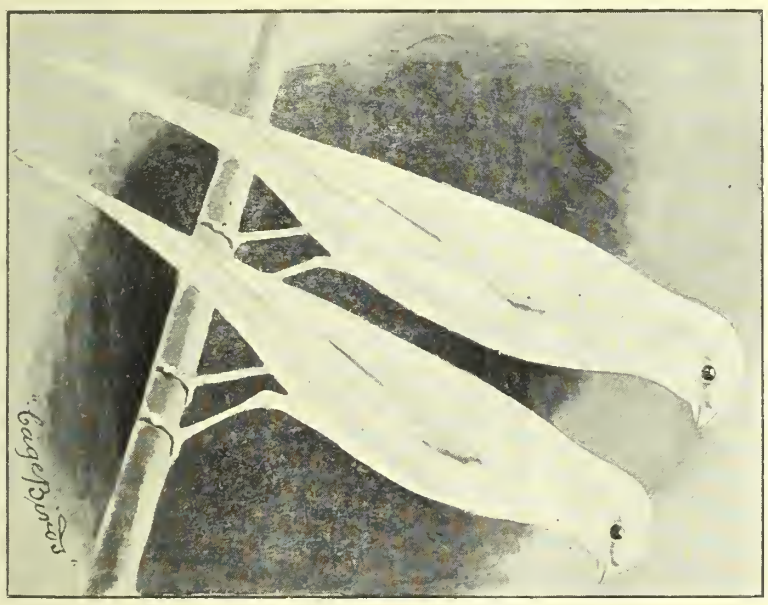
Border Fancy Canary
Yellow Cock. Good shape, fine round head, perfect wings.
Buff Hen. Rather flat head, fails wings.

Matched Pair Series No 3



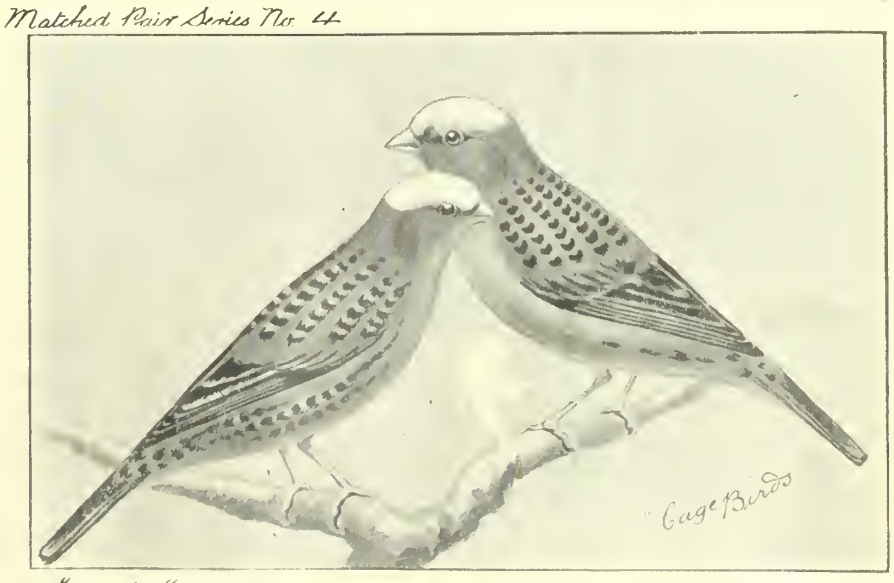
Crested Canary
Crest Bred Cock. Massive skull,
heavily feathered. Good shape,
Crested Hen. small crest, neat, well, veined.

Matched Pair Series No 1



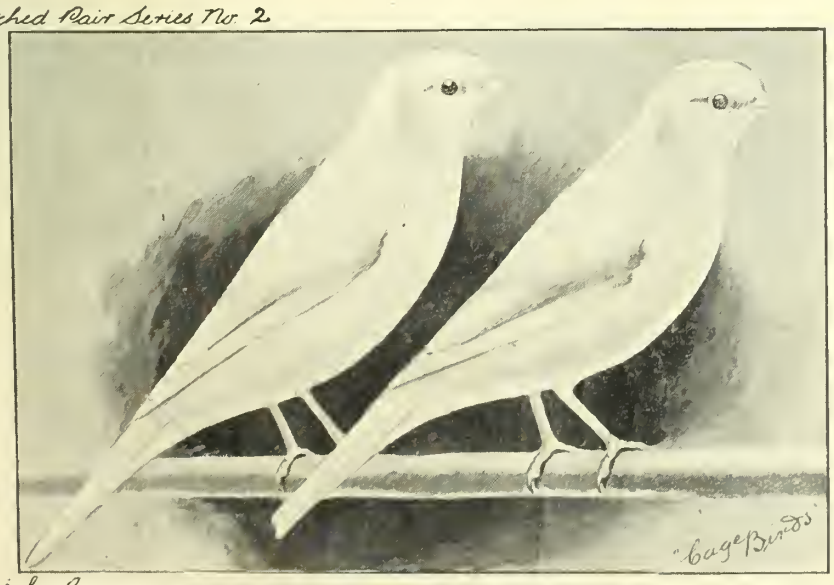
Yorkshire Canary
Yellow Cock. Rather small, but
good bird.
Buff Hen. Large, fails in shape
of body.

Matched Pair Series No 4



Lizard Canary
Gold Cock. Good shape, clear cap, well spangled.
Silver Hen. Broken cap fails in spangling.

Matched Pair Series No 2



Norwich Canary
Buff Cock. Rather long body, shade flat on head, good wings.
Yellow Hen. Round head, stout shapely body.

Observations on some British Finches.

By J. S. CRAWFORD.

(Continued from page 262.)

The Goldfinch's Excellent Points.

As I have already stated, the Goldfinch a great benefactor to the agriculturist, d this is to be specially noted in fruit antations, orchards, and gardens. Goldches feed their young on a great many sects, and yearly clear off great quanties of the apple aphis and apple sucker, so the caterpillars of that very destrucve moth, viz, the winter moth. They so feed on the flower-heads of dandelion, ickweed, groundsel, etc., as well as weed eds. They also include in their diet istles, plantains, burdock, docks, groundl, sorrel, wild mustard, and many other eeds which are injurious to crops, and nemies of the gardener. So we see that e Goldfinch is of immense value as a deroyer of insects and objectionable weeds. He even excels the Bullfinch as a cage rd, and together with his beauty and leasing note is greatly sought after for omestication. His virtues prove his ownfall, great numbers of these Finches eing caught every year. He is, however, learn, increasing in some districts, but a face of this there are districts where the ird is practically extinct, or only a few airs breed annually. Let us hope he will ncrease more and more every year, for by is beauty, pleasing song, and great useulness, he is worthy of our most careful rotection.

I have noticed that the youth starting in he very interesting and fascinating hobby f British bird-keeping almost invariably egins with a Goldfinch; I presume because he is a songster easily kept in coninement, having a rich voice, being altogether beautiful, and comparatively cheap o purchase, thus suiting the demands of shallow purse, which is, of course, a reat thing of itself. For myself, I would trongly recommend any boy or youth who nticipates starting in the hobby of wild ird-keeping to, perhaps after trying his 'prentice hand at the common Linnet, make the purchase of a Goldfinch, as he nakes a really good pet and a fine house ird.

He will also breed with the Canary in confinement, the young of the twain being called Mules. The Canary-Goldfinch Mule is a really splendid cage bird, and an excellent singer, although the cross-breeding is perhaps rather difficult for an amateur hand, and anyone anticipating breeding Mules should first get a lesson from an old hand. I would here point out that, like the Bullfinch, there is a Siberian Goldfinch, and, like that former bird, he is a bigger and stronger bird than our native Finch.

Some Goldfinch keepers teach their birds, to my mind, the very barbarous trick of drawing their own water and pulling their own seed. The trick is certainly an interesting one, but in order to make the bird accomplish the trick it has to be practically starved, and although some argue it is not torture after the bird has learned it (which is no doubt true), still, to be confined behind cage bars is, in my opinion, quite enough, without having to work for its living, and we must, I am sure, all admit that to draw its own water and pull its own seed is work, though perhaps pleasure to its owner. I understand, however, that the custom is dying out, though still practised to some extent on the Continent.

The bird is sometimes caught in its wild state by means of a hen decoy. This decoy is placed in the bottom half of a partitioned cage, the upper half having a spring door on top; the cage is placed in a prominent position with this flap or spring door opened, and when Goldie comes along he flits over to the cage in answer to the hen Goldie's call, flies in, the spring door shuts down, and someone is the owner of a fine cock bird. This is only one of the many devices of bird-catching, and this mode is also practised with the Bullfinch.

The Charming Chaffinch.

We now come to the Chaffinch (*Fringilla Cœlebs*). This bird has many local names, such as Shilfa, Spink, Twink Shilfa, Chaffy, Shelly, Spinx, Beech Finch, Boldie, Wet Bird, Buck Finch, Dung Finch, etc. One writer asserts in regard to the Chaffinch that if the country were to lose the Chaffinch it would lose its charm, and another writer states, and I agree with him, that if the country lost the Chaffinch it would be nothing short of a national calamity.

When in the country his "pink, pink" greets us at almost every turn. Here we see him tripping down the lane in front of us, while sometimes we see a flash of bright colouring—red, green, and white—before us, and the "Shilfa" lands in that small hedge in front, raps out his "pink, pink," sees us, and with another flash is off again. He is indeed a charm to the country, and worthy of his title as one of Britain's most beautiful birds. He is a very common Finch, and, being nowise shy, is easily approached.

His size is about six inches, and he has a black forehead (or frontal stripe), with nape and crown greyish-blue; back, chestnut-coloured, with a green sheen, the scapulars being similarly coloured; deep red breast, verging into white on the belly or underparts. The wings are black, with two white prominent bands running across them, and the tail is black also. The hen is not so gaudily coloured as her mate, being mainly ashy-grey.

The Chaffinch "At Home."

As the Chaffinch wins our admiration by his beauty, he also commands our attention as the most beautiful nest-builder of our British birds, except, perhaps, the Long-tailed Tit. The nest is constructed of various coloured lichens, moss, wool, lined with hair and feathers, but a good deal depends on the locality as regards the materials chosen. The nest will often be found in the fork of a fruit or other tree—sometimes in a hawthorn hedge. They also favour the fir as a nesting site, and I have also found it built in the ivy growing round the trunks of trees.

It is a wonderful structure, comprising compactness, neatness, durability, and beauty, and the bird will often weave bits of coloured paper, cloth, etc., in among the lichens, and the resemblance of the nest to its surroundings is indeed wonderful, and the whole is a masterpiece of nest architecture.

Some bird lovers form the opinion that it is from a sense of beauty that the Chaffinch builds such a pretty nest, but I, for one, do not share such a view, it being to my mind simply adaption to circumstances and self-preservation. As one can readily understand, any pair of Chaffinches, building such a nest through a sense of beauty on their own part, would only compass their own downfall, and probably that of their young, for being gaudily decorated (as some suppose through a sense of beauty) it would readily attract the attention of the birds' enemies, and if not killed themselves their young would probably be so, and thus the young Chaffinches would not live to inherit the supposed decorative properties of their parents.

To Attract or to Distract?

So from this one can understand that the nest must surely be built to distract and not to attract attention, and from this we see that the bird has no decorative instincts, but purely those of self-preservation, and the Chaffinch shows these propensities in a marked degree.

The Chaffinch lays usually four or five eggs of a pale purple colour, spotted and streaked with dark purplish-brown, these marks being generally towards the larger end; but sometimes an egg is found almost devoid of colour, varying, as most eggs do, greatly.

Like most other birds the Chaffinch is a good parent, and what droll-looking youngsters young Chaffinches are, to be sure. It is, indeed, a comical sight to come across four or five of these young hopefuls perched on a branch waiting, with but little show of patience, on their never-tiring mother.

As already noted, the Chaffinch is of great service to the agriculturist, and, though he will occasionally take a few berries and a little garden seed, still he includes in his diet such destructive insects as cockchafers, moths, caterpillars and chrysalides, crane flies, blight, beetles, and the eggs of insects and the following weeds—groundsel, chickweed, charlock, wild mustard, wild berries, and many other objectionable weeds; so, like the Goldfinch, the Chaffinch is a very useful bird, and deserves our every protection.

In winter the sexes separate and hunt in flocks for food, but whether they resume cohabitation when spring comes round again it is hard to tell, but I would mention I have seen some flocks of these birds with a mixture of both cocks and hens.

Like the Goldfinch, the Chaffinch makes a good cage bird, but, of course, not in such a marked degree as the former bird; but he will, like the Goldfinch, be found at the many bird shows throughout the country, heated competition often taking place between competitors for the production of the best birds.

A point has come up lately in regard to the Chaffinch, and this is, whether this bird walks or hops when on the ground. My experience is that the Chaffinch does both to a certain extent. I have noticed while the Chaffinch is feeding in fields that it hops, but when on the bare ground it will often assume the tripping gait of the Wagtail; but it would be interesting to hear from other naturalists what their opinion is.

The Robust Greenfinch.

We now pass on to the Greenfinch (*Ligurinus chloris*), called also Green Linnet, Greenulf, Green Grosbeak, Green Bird, etc. This bird is familiar to all, being well distributed and very plentiful, and, though common, is by no means an unsightly Finch. If he is not so gaudily coloured and as pretty as the Finches already dealt with, still he is handsome and has a pretty song, and is a bird, to my mind, in his right place.

We could not very well do without the Greenfinch, although the gardener often thinks otherwise, being no friend of that worthy, and almost as much disliked as the much-harassed Sparrow.

The Greenfinch is an active and robust bird, plump, and of a hardy constitution. He is very wary, and not easily approached, as whenever danger threatens he is off to a safe distance with his strange, Starling-like flight reminding one as if he had made up his mind where to go, and was determined to get there with all speed. He is about 6in. in length, and of a greenish-yellow colour, variegated with ashy-grey and yellow.

The hen bird lacks the yellow tinge prominent in the cock, being more of a greenish-grey in colour. The young are dark grey on the upper parts, with the throat and breast similarly marked, the back being brown, but the young Greenfinches soon take on the normal colour of their parents.

Feeding and Nesting.

The Greenfinch feeds on weeds and seeds, such as the charlock, thistle, wild mustard, corn, and the buds of trees. He also feeds on insects, such as crane flies, beetles, cockchafers, caterpillars, blight, etc. As I have already stated, there is not much love lost between the Greenfinch and the gardener, and, of course, it cannot be denied he does considerable damage in the garden; but, like the Bullfinch, I would plead for him on the ground of his being an insect destroyer, and I am of opinion he does more good than harm.

In winter the Greenfinch feeds on hips and haws, and such seeds as are found round the farms and stockyards, and while in search of food he is by no means shy, and is caught in company with the Linnet, etc., in great numbers every year.

Unlike the Chaffinch the Greenfinch is a very untidy nest-builder. The nest, which is generally built about April, is constructed of twigs and grasses, with a large proportion of moss, and is lined with horsehair, wool and feathers. The nest will be found in many positions, but the Greenfinch dearly loves a good thick bush for the purpose.

The eggs, of which there are generally five or six, are sometimes very round and sometimes very pointed, and of a light green colour spotted with red, and this usually round the larger end. He is, like the Finches already dealt with, a good cage bird, and has often been termed the boy's pet. I have seen great numbers of this Finch sold at auction for a few coppers, which proves his plentifulness, whilst his hardiness makes him in every respect suitable for domestication.

The Greenfinch also commands a place on the show bench, and when trained for showing is indeed a lovely bird and greatly admired.

(To be continued.)

Habits of Teal.

Although Teal move about in flocks, they have the peculiar habit of spreading themselves over the country, and may often be disturbed in the brooks, reedy dykes or waterways of the marshes. They fly fast and straight, their small wings beating quickly. If undisturbed they are likely to stay, as they have a great partiality for certain spots; in fact in this matter they are almost as conservative as the Snipe. Not being so dependant upon large sheets of water as the Wild Duck, they are not so easily disturbed or interfered with. With Duck if one is frightened the whole flock takes wing and probably moves off to some quieter district. I have during a day put up many Teal singly, over marshland, not more than a mile or two in extent.

THE GREEN WOODPECKER.
(MALE)
See Mr. Sandy's Article.

The Management of Belgian & Scotch Fancy Canaries.

By THOS. SMITH.

(Continued from page 261.)

If the Scotch Fancy pair are to rear their own young, the cock should be confined to one hen, which is essential. Let it be either the Scotch Fancy pair or the common pair; for successful rearing it is necessary to have devoted and undivided attention. It is well to decide at the commencement how the rearing is to be accomplished, not that it is imperative to continue as they begin. We all know that changes have to be made to meet exigencies, but forethought and planning beforehand saves a vast amount of heart-burning, plenty of which comes during the season, and should be avoided as far as possible.

A Tip About the Tail

The tail feathers in the breeding season are apt to become dirty and clogged through running about the bottom of the cage. A good plan with Scotch Fancy and Belgian Canaries is to clip about an inch or less off the end. This can be done when the bird is in the hand; at any rate, the claws should be pruned. The cutting of the tail spoils the appearance of the bird till the new feathers appear in the autumn, but it promotes tidiness.

Every fancier likes to see a clean, smart, tidy Scotch Fancy or Belgian Canary, and in the busy season life is too short to be daily catching the bird and washing the tail feathers, as has sometimes to be done with certain high-class favourites.

At Commencement of Breeding Season

food may be augmented to the extent of giving the egg mixture three times a week and available green food, which must not be frosted, or a piece of ripe apple every second day. This helps to bring the birds forward, but as soon as the hen has laid the full clutch of eggs, withdraw the egg mixture and green food, giving only Canary seed and a pinch of raw rape seed.

It is of the utmost importance and is absolutely essential to success that substantial and the best of food should be given while the parents or foster-parents are feeding. Cheap eggs are apt to be tainted, and a tainted meal may lead to the loss of the young. Where fresh eggs can be obtained they should be used, and if a fresh supply of egg mixture is put into the pan three times daily, both the yolk an dwhite of the egg can be mixed up with the biscuit. As already indicated, there are various biscuits which are suitable, but I prefer farthing Abernethy. Both old and young birds do well on this diet.

On the Feeding of Young.

On the thirteenth day from the date on which the hen commenced to sit, egg mixture should be supplied and given fresh three times daily, say at 6 a.m. (or earlier, but not later), noon, and 6 p.m., giving at same time fresh green food, removing all old food. In short, the birds should have nothing else to feed upon but wholesome food. Hemp seed should be added. I strongly recommend the crushing of the Hemp seed and mixing it with the egg food. My experience is that the crushed Hemp is a decided help, but it should only be given in limited quantities. If the pair are good feeders, on and after the fourth day the egg pan should be well cleaned out by them; if otherwise, there is cause to feel anxious about the young.

Some fanciers, when they do not see food in very young birds, become alarmed and resort to hand-feeding, which is a serious mistake. In some of the best attended young, food is not visible in the crop during the first two days, and the owner should be pleased if they have a plump, healthy appearance, and keep close together crossed over each other, and he should disturb them as little as possible. Within the first few days, young birds are liable to be pulled out of the nest, necessitating a watch being maintained to see that no young bird is lying about the nest-board or on the bottom of cage. Should a young bird be found out of the nest, it should not be thrown out without testing if there is a spark of life in it, which can be done by holding the bird between the palms of the two hands or before the fire. If there is still life it will move and speedily recover, and should at once be put under the hen. I knew of a cup winner being saved in that way.

Some hens are very guilty of dragging the young birds out, and require to be watched at stated intervals, three or four times a day. By the fifth day a thriving bird will be too heavy to be drawn out, and anxiety on that score will then end.

Delay in Egg-Laying.

This is a subject of annoyance to fanciers at all stages; to the beginners, the matured, and the long-experienced fanciers. It is all the more annoying should it happen with the best hen on which every hope is centred.

The pair should not be separated; rather put the cock into a different cage for the half of each day, running him back into the breeding cage for the remainder of the day. That plan has succeeded where all others failed, and is well worthy of a trial. If the hen is in condition she will set to her mate at once. Plenty of moss is a help, as it encourages the hen to build.

Canaries vary as to when they commence to lay; some take ten days, others three weeks, and others longer. From the date of pairing patience has to be exercised. Nature will run its course. When a pair is tardy, the egg mixture should be curtailed, as the birds will be in danger of becoming too fat, and that might spoil the hen for breeding.

From a Drawing *By R. Jolliffe.*

THE SENSATIONAL ONE-HUNDRED-POUND SCOTCH FANCY CANARIES.

Portraits of the Buff Cock and Pied Buff Hen shown by Mr. McClure (Glasgow), and claimed at the Paisley New Year Show for £100.

A Word on Hand Feeding.

Hand-feeding should be avoided if at all possible. I have known breeders who, because they did not see food in the crop on the first day of existence commenced hand-feeding. This invariably leads to the hen stopping to feed. Nothing equals the natural up-bringing for health and the minimum of labour, and the hen should have every chance of doing her duty. A bird or a nest may be saved by hand-rearing, but a hand-reared bird is backward, and bears a sickly appearance.

A small cage, say with one perch and fairly wide wires, should be available, so that when both or either of the parents or foster-parents evince any disposition to pluck the feathers of the young birds they should at once be consigned to the nursery. The cage should be so placed that the parents can easily feed through the wires.

Plucking of feathers has a bad effect and spoils the carriage of a Scotch Fancy or Belgian Canary until it passes completely through the moult. Preserved with a nursery cage when capable to take care of themselves, the young emerge strong and ready to fight the battle of life.

Plenty of Grit a Necessity

The bottom of the cage should always have a sprinkling of sea sand with grit. Very fine sand is not suitable and should be avoided. Bird and seed shops have suitable sand put up in packets at a reasonable figure, so that no fancier need to be without sand. The hen in particular, the moment fresh sand is supplied, jumps to the bottom and picks at it with great eagerness.

Sea shells should be pounded down and run through a sieve, and afterwards mixed with the sand. The egg shells which the housewife throws out can be used in the same way. Were shells freely mixed in the sand, fewer cases of egg-binding and of eggs without shells would be heard of. Little attentions of this kind reduce the heart burnings which arise in connection with the aviary.

Trouble will come, but it is the duty of every fancier to place helps at the disposal of our pets who are not free like the wild birds to search for what aids nature in the breeding season. A true fancier on a holiday to the coast will bring home something that will be useful for the live stock.

In the event of a hen taking to the nest and not laying, she should be provided with a nest of eggs and allowed to hatch them and bring up the young. Ten chances to one she will lay and give no further trouble.

Failure to Feed the Young.

The failure of hens to feed the young is the greatest vexation of the bird room, and is intensified by the fact that little can be done to effect a cure. Occasionally a hen will feed if the cock is removed, but there is the danger later on. In ordinary cases the male takes the responsibility of rearing from the tenth day or thereabouts onwards, so that when he has to be removed from that or any other cause he should be put back beside the hen when the young are eight days old. As a rule he will take up the feeding of the young until they are in a position to forage for themselves.

In our varying climate March is rather early for eggs and too early for young, and the fancier who has next month to look forward to for a start will have the best of it. Patience at the start brings its own reward, and patience should be practised all through.

(To be continued.)

YORKSHIRES IN THE NORTH OF ENGLAND.

A photograph of the magnificent challenge cup belonging to the Northern Yorkshire C.C., reaches us from the hon. secretary, Mr. T. C. Crawhall. It is a splendid trophy, and a credit to so young a Specialist Club. Mr. Crawhall has also been good enough to supply the appended particulars of the work to date of this body of Yorkshire enthusiasts.

About twelve months ago the Northern Yorkshire Canary Club was formed to foster the interests of the bird of length and position in the North of England. Until then there were only a few breeders, in the North-Eastern part at least, who kept one or two pairs of Yorkshires. During the year we have received applications and enrolled thirty members, and have the prospect of many more this coming season, including two of the officials of the Cumberland Yorkshire C.C., who, unfortunately, were too late in applying for registration this last season to compete for the specials offered. We welcome additions to our ranks. We have subscribed for a Challenge Cup, which was competed for at Wallsend, and was won by our esteemed President, Mr. J. W. Cuthbertson; should Mr. C. be successful in winning it next year it will become his own property. It is for the best young bird bred by a member, to be won two years in succession, or three times in all. In addition to this, we have provided three medals for competition at each of the following local shows: Newcastle, S. Shields, Blaydon, and Gateshead. This has created enthusiasm amongst the members, and has increased entries at the shows. We have also given a large silver, gold-centre medal for the most points at the above shows. As regards the type and quality of the exhibits, there has certainly been a great improvement upon last year, and so far as I can hear members are striving to obtain better birds for breeding with, and hope to further improve their stock this coming season. We usually have had to take a back seat when, as is very often the case, some of the "second raters" sent from Yorkshire birds which are not good enough to win in their own district, but are just a trifle better than ours; so they take the plums whilst we have to pay the piper. But the Northern men are waking up. They will not be beaten if it is possible to buy good ones, for they cannot buy them, as many of our members are working men. The classes have filled well on the whole, the shows have been practically equally well supported, and altogether the future of the Yorkshires seems rosy enough in the districts covered by the Club.—T. C. Crawhall, Hon. Sec.

"AVIARIES, BIRD ROOMS AND CAGES"

Is the title of

CAGE BIRDS' LATEST HANDBOOK

It is written by that well-known fancier Mr. H. Norman ("Cage Birds" Artist-in-Chief) who has illustrated it with a wealth of helpful drawings. It also contains four lovely full-page photographic plates.

It must be on every bird-lover's book-shelf

who desires to thoroughly understand the proper Building, Fitting and Management of Aviaries, Bird-rooms and Cages.

Price 2/3, post free, bound in cloth, gilt

Cage Birds Annual

— For 1908 —

ie Standard Guide to the Fancy,

IS

A MARVELLOUS SIXPENNYWORTH

absolutely the best ever put efore the Fancy.

MORE LETTERS OF APPRECIATION.

I have just received CAGE BIRDS ANNUAL, d I think it is A1.—A. W. WATSON (Leith).

I am sure CAGE BIRDS ANNUAL must be a eat benefit to the Fancy. It is a great nprovement on last year's and should demand good sale.—A. Wellings (Prescot).

The ANNUAL is quite a treat for all bird nciers. I may say it is just the thing to our young members good. I wish it ery success.—A. E. Bishop, secretary Worster and Dis. C.B.S.

I must take this opportunity of thanking ou for CAGE BIRDS ANNUAL to hand. You ould have no difficulty in clearing out at n early date such a volume of interesting nd instructivo matter for sixpence a copy. -A. W. CURTIS (Fulham).

The ANNUAL for this year is simply grand, I enture to say is the best ever published. he diary for the year is very handy indeed, nd the illustrations are fine. I must say Mr. orman's work is the very best I have ever en. Good luck to CAGE BIRDS.—A. H. C. GG (Porth).

My CAGE BIRDS ANNUAL arrived some time go, but as it was the first one I have had I anted to read it carefully through before ying what I thought of it. I have studied veral of the items and consider the book a arvel of cheapness. Nothing could be finer; is well worth double the amount charged r it.—JNO. C. SPILSBURY (Stockport).

Permit me to compliment you upon this ar's issue of CAGE BIRDS ANNUAL just to nd, writes Mr. J. B. Waterman (East Dulch). I am pleased to see you have reverted the old style, which I think is more popular an the form you adopted last season. The esent number is indeed an excellent one, the strations being splendidly done, while the merous articles are both entertaining and structive. The "Standards and scales of ints" is a very useful feature, and what a eat the article on "Washing and preparing birds for exhibition" will be for the novices! deed, the whole work is replete with valule information to those interested in the ping, breeding and exhibiting of cage birds, d the work is as indispensable to lovers of hobby as "Whitaker" is to the man of siness, or "Dod" to the politician. It is and value for the sixpence you charge, and hope it will command a ready sale.

A charming new cover, many beautiful ustrations of winning birds printed on t paper, a lovely coloured plate for ontispiece, a complete revision of all e popular features, and the addition strikingly useful new features, mark is 1908 issue.

The articles, too, have never been exelled, and both Canary, Hybrid, British nd Foreign bird keepers have been pecially catered for. The needs of the eginner have likewise been given the llest consideration.

Bird-lovers should hurry p and secure their copies t once. Get one Post Free by return by sending a

Postal Order value SEVENPENCE

To The Manager,
"CAGE BIRDS,"
154, Fleet Street, London, E.C.

With Spring's approach breeders of birds will be turning their attention to the rearing season, and Messrs. Spratt's Patent Ltd., 24 and 25, Fenchurch Street, London, E.C., the world-renowned firm of specialists in all kinds of bird, etc., foods, take this opportune moment to again bring to our notice their Cod Liver Oil Cage Bird Food. Last season, we understand, it was sold and used much more largely than ever before, and has superseded the egg and breadcrumb method in many a bird room. If fanciers have not already used it they ask the favour of a trial, and will on receipt of a post-card send samples of this food and, if desired, samples of their ready prepared Red or Orange Colour Foods, Mixed Bird Seeds, etc. A copy of their pamphlet on Cage Bird Rearing they will also be pleased to send all applicants. It is claimed that the Cod Liver Oil Food has passed the experimental stages. It is now widely recognised as a most efficient egg-food substitute for the rearing of young birds, for keeping the hens in good condition during the laying and rearing time, and for assisting the deposition of colour during colour feeding. Its tonic and nutritive properties also render it invaluable during the moult.

A NEW NORWICH CLUB FORMED AT BRADFORD.

At a well-attended meeting of Norwich fanciers and prominent exhibitors, held at the Market Tavern, Bradford, on March 14th, it was decided to form a Norwich Plainhead Club. Mr. D. Sunderland was voted to the chair, in the absence of Mr. W. H. Shackleton, and in opening the meeting he spoke of the advisability of forming such a club, which at the present time was a much needed one. This proved to be the case on the enrolling of members, a total of 36 members being down in good time, including prominent Norwich fanciers from York, Huddersfield, Halifax, Accrington, Buttershaw, etc. After discussion it was decided to leave the question of rad us open for the present, and to invite suggestions from intending members. It was moved that a small sub-committee be formed pro tem. to get all in working order and arrange next meeting. This committee consisted of the following gentlemen:—Messrs. W. H. Shackleton, A. Haigh, J. W. Holmes, F. Hammond, J. Wilcock, S. Wilcock (Bradford), J. Mottram (Halifax), T. Boyle and D. Hunter (York). It was also carried that the annual subscription be 2s. 6d. Will all intending members kindly communicate with the secretary, who will be pleased to give all information possible; will they also kindly state if they will be eligible for election to office.—Oliver Mitchell, secretary, pro tem., 13, Lodge Terrace, Bowling, Bradford.

OUR LATEST SET OF PICTURE POSTCARDS.

"Pairs Matched for Breeding."

With this week's special spring number is included a new and novel set of picture postcards, from the brush of that versatile and clever artist, Mr. H. Norman, which we venture to think will meet with instant and hearty welcome from readers of our journal, both by reason of their educational value, accuracy of drawing and usefulness.

And we may say that it is only by readers making use of them that we can hope to be in some measure recouped for the heavy expenditure involved in their production. Therefore, we ask our friends to make the fullest possible use of the eight post cards, comprising the set, in the course of their correspondence with friends, as by this means CAGE BIRDS may be brought to the notice of someone who delights in birds, yet who has not previously made the acquaintance of our journal. The post office regulations, we may say, permit of at least one-third of the space on front (at left-hand side) being used for sending messages, the name and address being written on the remaining space on the front of the card.

The illustrations require no explanatory remarks from us, the birds and the inscriptions under them telling their own story. That they may assist some of the younger fanciers among our many friends to a fuller and more complete understanding of what is meant by the term, "the proper mating of birds," is our sole wish, and if this object be attained, then our artist and ourselves will feel more than satisfied, for labours involved, in the fact that such a result has accrued from our efforts.

FURTHER SUPPLIES

of these "Matched for Breeding" Postcards may be obtained post free at the low price of

3d. THE SET OF EIGHT

from the Manager, "Cage Birds," 154, Fleet Street, London, E.C.

TYSON *v.* CARL.

A completely misleading and mendacious report of the above case having appeared in a contemporary journal, we have no option but to depart from our original intention of saying little or nothing upon this decidedly unpleasant topic.

Knowing the person in control of the journal in question, we do not expect, and have never expected, even ordinary fair play from it, but after reading the account in its columns it is impossible to refrain from an expression of surprise that any public paper, no matter what its standing, should so completely misrepresent its opponent's case, suppress everything that tells in the latter's favour, whilst distorting and magnifying everything that remains.

Contrasting their report with the verbatim account supplied us by an independent London newsagency, we venture to say that scarcely *a line of the evidence is truthfully reported.*

Whole speeches are put into the mouths of both plaintiff and defendant, and Counsel on both sides, which were never uttered by them. The speech of the plaintiff's counsel is apparently given in extenso, but not a single word of the speech for the defence is published!

They cannot alter the verdict, but they try to make it appear that it was quite a "toss of the coin," so to speak. Whereas, the judge declared that he was never for one moment in doubt, almost from the start of the case, both with regard to the intention of the parties and the actual contract that was made between them. (Vide the judgment, *printed word for word as it was delivered*, given on page 274 last week).

As a matter of fact, the judge saw through the lines and arrived at the secret of the dispute as quickly as anybody. He dismissed the various "red herrings" which the plaintiff's counsel tried to draw across the path, and his shrewd observation to the effect that "the catalogue and schedule upon which our complaint was founded looked as if they were publications issued by our contemporary," went to the root of the whole matter.

Not a single line of the expert testimony is recorded by our contemporary, nor are the names of the witnesses published. Why?

Was it because one of the expert witnesses for the plaintiff was proved under cross examination to be associated commercially with the proprietor of our contemporary, whilst the other witness was simply a printer's foreman who testified to the fact that *the advertisements comploined of* and ordered in the contract as "head-lines," were ACTUALLY BLOCKS SUPPLIED BY OUR CONTEMPORARY?

These and sundry other equally damaging facts we might have published last week had we not desired to show that consideration for a defeated adversary which it is usual and proper to display.

Of this, however, we are certain, that such palpably malicious misrepresentations will always fail of their intended effect. The members of Mr. Tyson's Association, however loyal they may be to Mr. Tyson, are, at any rate, not unanimous upon the question of his attitude towards our paper. Several of them, though subscribers to the fund founded for the purpose of bringing this action against us, have confessed that in their opinion Mr. Tyson made a serious mistake.

We would not have ventured to say anything further on the subject, but for the discreditable tactics of our real opponent, who, having egregiously failed in the Law Courts with Mr. Tyson as a protecting buttress to convince an impartial judge that we were as unworthy as they would have the world believe, vainly seek through the medium of their own columns to set up a Pyrhhic victory for the plaintiff—possibly because they feel they owe him this sop for heeding the "Voice of the Siren."

An excellent programme of monthly meetings has been arranged by the Exeter and District C.B.S., a copy of which reaches us from the Secretary, Mr. R. H. Folley. It includes a pair show during March, First Feather Shows on June 6th and August 1st, washing competitions on October 6th, and a fanciers' ramble on July 4th. Meetings are held at the Oddfellows' Hall, Exeter.

The annual year book of the Brighton F. and F.A., to hand from Mr. Fred Perrin, the sec., is quite a handsome little volume. The secretary's 17th annual report states, among other things that the membership is very good, there being more names on the roll than in the previous year, and that the cash balance £7 7s. is a slight increase on that of last year. The society has now five new Challenge Cups.

CLUB NOTICES: continued.

Wallsend and Mid-Tyne C.B.A.—Mar. 27, Station Hotel, Wallsend, 7.30. Business important. Intending members invited.—J. Johnston.

Yorkshire Canary Club of Scotland.—Mar. 23, 65, West Regent St., Glasgow, 8. Committee meeting, first feather show, classification and patronage to open shows, proposal to provide cup for annual competition.—F. Bowman.

CLUB NOTICES.

One notice of any forthcoming Society meeting inserted free. It should reach us by Tuesday morning's post. Specially printed Club Notice Postcard may be had free on application to our Manager. Secretaries should always use them.

Altrincham C.B.S.—Mar. 24., Victoria Restaurant, 8. Lecture by Mr. S. Hadwin (Liverpool) on "Breeding for Colour." Fanciers and friends invited.—B. Head.

Ashton-under-Lyne A.D.O.S.—Mar. 28, P.S.A. rooms, 8. Business important.—H. Foden.

Attercliffe and Dist. C.B.S. Mar. 26, Horse and Jockey Hotel, 8. Concert for members and wives. Friends invited.—W. Richinson.

Ayr and Dist. C.B.C.—Mar. 27, Wallace Tower, 8. Committee meeting, final arrangements for members' show, and to erect staging.—C. Irvine.

Admiral Duncan, O.S. Nottingham.—Mar. 21, Admiral Duncan, 8. Very important business. — W. Healey.

Barnsley and Dist. C.B.S.—Mar. 21, Clarence Hotel, 7.30. Election of secretary and arrangement of syllabus for summer months.—T. Coward.

Barrow and Dist. C.B.A.—Mar. 25, Club-room, 7.30. Annual meeting; election of officers.—W. Willison.

Bradford East O.S.—Mar. 24, Park Chapel Schools, 8. Debate on "The Yorkshire Canary," opener Mr. C. Cowgill. Election of delegates to Yorkshire Union of C.B.S., and other important business.—H. Hill.

Bradford West C.B.A.—Mar. 21, Red Lion Hotel, Girlington, 5. Members' tea and social.—H. Clegg.

Bramley and Dist. O.S.—Mar. 21, 7. Paper on "Breeding and Rearing of the Norwich Canary" by Mr. Mennard (Leeds).—Jas. Metcalfe.

Burnley and Dist. C.B.C.—Mar. 24, 7.30. Committee meeting.—G. Watson.

City and Suburban A.C.B.—Mar. 23, Church Institute, 60, Paddington St., Marylebone, W., 8.15. Lecture by J. M. Norris, Esq., on "The Roller Canary," and payment of prize money. Bird lovers especially invited.—V. Wynn.

City of Wakefield O.S.—Mar. 21, Crown and Anchor Hotel, 7. To discuss cup rule No. 4.—Parker and Atkinson.

Darlington C.B.S.—Mar. 25, Half Moon, 8. Special meeting; business very important.—E. Brunskill.

Derby C.B.S.—Mar. 28, Victoria St. Congregational Schoolroom, 7. Alteration of meeting time, classes for open show and members'.—W. Stevens.

Dysart C.B.S.—Mar. 21, Normand Hall, 7.30. Business of Importance.—New members enrolled.—J. Logan.

Ealing, Hanwell, and Dist. F.S.—Mar. 26, headquarters, 8. Lecture by Mr. C. A. House on "How to Succeed in the Fancy." Friends and Fanciers invited.—W. Bird.

Glasgow and Western C.C.—Mar. 28, 122, Ingram St., 4. Monthly show, five classes; Goldfinch, Brit., Linnet, Siskin, Greenfinch, and For. Goldfinch. Judge, Mr. P. Pettigrew. Judging competition open to all: members' entry, 6d.—J. H. Adam.

Great Harwood and Dist. C.B.S.—Mar. 23, headquarters, Town Gate, 7.30. Business important.—G. Waddington.

Great Horton Good Intent O.S.—Mar. 28, Church Schools, Southfield Lane, 7.30. Special business.—H. Schofield.

Great Horton O.S.—April 11, Butcher's Arms, 8. First Feather Show, and special prizes for members' shows.—J. Holroyd.

Greenwich and Deptford C.B.S.—Mar. 26, Two Brewers, Greenwich, 8. Very important financial business to be transacted.—F. W. Hamer.

Heywood and Dist. C.B.S.—Mar. 24, Central Dining Rooms, 7.30. Lecture by Rev. R. P. Hudson (Bury).—A. H. Meadowcroft.

Kilmarnock C.B.F.C.—Mar. 25, No. 3 room Temperance Hall, 7.30. Goldfinch, Greenfinch, Linnet, Redpoll, Siskin, or Twite judging competition. Members please turn out a good team of birds.—R. McCaw.

Leicester C.B.S.—Mar. 25, Hare and Pheasant Hotel, High St., 8.15. Table show: Siskin, Redpoll or Twite, Linnet, and A.S. Brit hen. Judge, Mr. H. J. Chick (Nottingham), who will also lecture on "Some well-known British Birds from an Exhibition point of view." Fanciers invited.—J. A. Tyler.

Liverpool O.S.—Mar. 24, Alexandra Hall, 8. Open show, judges, C.B.U. business, and other important matters, including CAGE BIRDS advt.—J. W. Metcalfe.

Macclesfield and Dist. C.B.S.—Mar. 26, Daybrook St. School, 7.30. To make final arrangements for Mr. S. R. Compton's lecture on Mar. 28, 7 p.m. Subject, "Canary Breeding and Management." Fanciers and friends invited.—F. Broadhurst.

Metropolitan C.B.A.—Mar. 26, Crown Hotel, Lavender Hill, S.W., 8.15. Important lecture by well-known authority. Fanciers heartily welcome.—A. J. Head.

Morriston and Dist. C.B.S.—Mar. 28, Woodfield Coffee Tavern, 7.30. Business important.—D. Jeremy.

Musselburgh O.S.—Mar. 28, McDonald's Rooms, 7. Issue of rules, general business.—D. Eay.

Northern B.B.M. and F.B.C.—Mar. 21, at Lockhart's Cafe, Clayton St., 3. Annual meeting. Balance sheet for 1907 will be read and medals presented to successful members; election of officers, arrangements for table shows and patronages. Fanciers wishing to join please send their names to J. R. Slack, sec.

North Manchester C.B.S.—Mar. 24, Christ Church Schools, Harpurhey, 8. Paper by Mr. W. A. Bladon, "Management of Bird Room." Fanciers and friends invited.—J. Davey.

Oldham and Dist. C.B.S.—Mar. 24, Textile Dining Rooms, 8. General business and washing competition; open to all.—F. Steeple.

Pendleton and Saltord O.S.—Mar. 23, Chapel St. Congregational Hall, 8. Lecture by Mr. Raynes on "The Norwich." Fanciers and friends invited.—W. Jackson.

Porth and Dist. C.B.F.S.—Mar. 21, Danix Temp. Bar, Hannah St., Porth, 7.30. Business of importance.—R. G. Challenger.

Sale Open O.S.—Mar. 28, Sale Hotel, 7.30. Table show of pairs, and lecture by Alf. Wellings.—G. F. Hardcastle.

Seaham Harbour and Dist. C.B.B.A. Mar. 21, Station Hotel, 7. Business important.—J. M. Nicholson.

Stockport B.F.A.—Mar. 24, Boar's Head Hotel, 8. Show date and alteration of meeting night.—W. Stafford.

Sunderland C.B.A.—Mar. 28, The Cafe, Fawcett St. Smoke room, 7.30. Adjourned meeting for judges, rules. Members please bring friends.—F. W. Gordon.

Tong and Dist. C.B.S.—Mar. 24, Holme Lane Hotel, 7.30. Paper by Mr. Allen (Cleckheaton) on "The Yorkshire Canary."—J. Smith.

Winsey and Dist. C.B.S.—Mar. 21, Horse and Groom Inn, 8. Mr. J. Hartley will open a debate on "The Cinnamon Yorkshire." Fanciers and friends invited.—E. W. Johnson.

QUESTIONS & ANSWERS

DOUBTS AND DIFFICULTIES SOLVED BY SPECIALISTS.

(1)—*All questions must be clearly written in ink (or typewritten) on one side only of paper, and must conclude with either the correct name of querist, or a pseudonym, or initials.*

(2)—*The proper name and address in full of querist must always be written on a separate sheet of paper and enclosed with the query. In no case must the address appear on the query.*

(3)—*Queries intended for different specialists must not be written on the same sheet of paper.*

(4)—**Queries must not include** *or be included in orders for books, instructions re advertisements, or any other matter for publication.*

(5)—*The department to which the queries refer must be stated in bold letters on the left hand corner of the query.*

(6)—*If an answer in the same week's issue is desired, queries must be posted to reach us by* **Monday's first post** *at latest. Queries will be dealt with in the order in which they are received, and only as space permits. The earlier queries are received the better attention they are likely to have.*

(7)—*Queries relating to illnesses of birds, except enquiries as to cause of death (for which see Post Mortems) will be answered by return of post on receipt of a postal order for sixpence and an addressed stamped envelope. Queries of an ordinary nature will be answered by post, if desired, on receipt of a postal order for one shilling and a stamped addressed envelope.*

(8)—*All who require letters of complaint written to advertisers must state grounds for doing so clearly and fully, and enclose a fee of sixpence to pay postage expenses, &c., otherwise their letters will not receive attention.*

(9)—*All queries must be addressed* **the Editor, "Cage Birds,"** *154, Fleet Street, London, E.C. Only queries so sent will be answered. Postcards are not admissible.*

Queries will be answered under the following conditions:—

NOTE.—Readers are requested to carefully study past numbers and current issue before submitting questions. By doing so they may save trouble and unnecessary repetition.

THE following gentlemen represent CAGE BIRDS staff of **ADVISORY EXPERTS.** Queries must in no case be addressed to any of them individually, but to the Editor.

Canaries.—**Claude St. John.** British Birds, Mules and Hybrids **G. E. Weston.** Foreign Birds—**Wesley T. Page,** F.Z.S., M.B.N.H.S., &c., Park and Lake Aviculture—**Frank Finn,** B.A., F.Z.S. M.B.O.U., &c. Wild Bird Life **H. Norman.**

NOTE.—If an answer is required concerning the proper mating, etc. of Norwich, Yorkshires, Crests, Cinnamons, Greens, Borders, Lizards, Scotch or any other variety of the Canary family, we shall, should the querist desire us to do so, be pleased to submit his question for answer to some leading specialist of the day on the variety concerned.

CANARY QUERIES.

Answered by CLAUDE ST. JOHN.

Starting Again.

"Fresh Starter." You will doubtless find the notes re converting a shed into an aviary on the Novices' page during the last two weeks very helpful. Most of these remarks would apply equally to your own case. But as your shed has so much glass, it will be best to defer beginning to breed until April has commenced, as the shed is doubtless subject to fluctuations of temperature. Two cocks and four hens, breeding in cages, and running each cock with two hens alternately, should give you a very fair start. Sawdust must not be used for the bottoms of the cages during the breeding season. The fine gravel from the seashore will be very good indeed for the purpose. After the breeding season is over, and in the flights, to which the young are transferred, sawdust is both cleaner and warmer than sand, but a shallow tin of gritty sand must be kept in one corner of the cage. When the moult is finished you would do well to remove the cages and give the birds freedom of the whole shed for the winter. 2: The sample of Canary seed you send is very sweet, and a good sample; but it is very small—that is its only fault. The rape is far too strong for my choice; you should try to get some of the same kind that is mild.

Does Polygamy Pay?

Pedlar.—Yes, two cock birds and six hens would agree together flying loose in a room with plenty of nesting boxes provided, and would doubtless breed successfully. As to whether it would be more profitable to mate each cock alternately with two hens in breeding cages it is difficult to say. Indeed, I should say that only the actual results of each method could decide the point. To a great extent the class of birds kept would influence the matter, and if you had a good, hardy, free-breeding variety or strain, the result of the birds flying loose would probably show the greatest number of birds hatched and reared. But with higher-class stock, if you have already acquired some skill in the management of the birds in cages, and providing you purchased another cock bird to run with the two extra hens, it is quite possible you may produce more birds by breeding in cages. But even if you did, there would be, as a set-off, the extra cost of a third cock bird for the third couple of hens, as well as many times over more work and trouble all the season. With very ordinary luck I should expect the balance to be in favour of breeding with them loose in the room.

Building Aviary.

Doubts and Difficulties. There seems to be really little difficulty in building an aviary on the plot of which you send a rough sketch. The situation and aspect appear to be very suitable. If the parting wall between the premises of the houses marked No. 24, and 26, is high enough, I should utilise that for the back of a lean-to structure, which, by starting from the wall at the bottom of the garden, might be made any length up to twenty-five feet, leaving you then with a clear fifteen feet between the end of the aviary and the house door. The portion of the back end should consist of a solid wooden structure about six feet long for shelter, roosting, nesting, etc. and the remaining fifteen feet of open wire with a wood roof. If the wall is high enough to allow this to be carried out, a similar lean-to aviary would doubtless run all along the wall of the bakehouse at the bottom of garden. For a separate span roof building the space between the two small flower beds near the centre of the open space seems most suitable if it is available. You do not say what birds you wish to breed, but this part of your query, and also that about dimensions, you will find more fully dealt with in the aviary articles published the last two weeks than we can possibly do here.

A Boy Fancier.

P. Brogden.—Never mind being a boy, P.; you'll be a man some day, and, let us hope, a good, big, and successful fancier. The practical way in which you put your questions augurs well for the future. As this is your first year, too, I heartily wish you success; but should fortune not smile, bear her frowns like a man, and—try again. Study CAGE BIRDS carefully; that will help you. Now for your questions. 1. The best birds you could get for feeders would be just the ordinary run of common Norwich. The commonest birds are more likely to succeed than a better class. The common nondescript of no particular breed would also answer the purpose very well. All you require is a vigorous, healthy type of bird, which is boo active and full of life to think of neglecting to feed its young. 2. The pair, or pairs, of feeders must be mated and allowed to go to nest just the same as the birds whose young they are going to rear. They must also be mated near the same time in order to have them nesting as nearly as possible at the same time. Then you can either exchange their eggs for those of the better birds whose young they are to rear, or allow each pair to hatch their own eggs, and transfer the good youngsters to the feeders, if necessary. As a rule, it is only necessary to use feeders for highly-bred birds, which often fail in parental duties. 3. You must not rely upon hen Mules for feeders, for although many cases of their feeding young are known, they must be regarded as exceptions rather than the rule. 4. A pair of the commonest Canaries which might be quite serviceable for feeders might be picked up for 5s. Norwich hens suitable for feeders cost from 2s. 6d. to 3s. 6d. Then there must be a cock to mate with them.

Hens Ready: Cocks Backward.

P.G.—Your difficulty is probably due to commencing to feed up both the cocks and the hens at the same time. You should have commenced with the cocks about a fortnight earlier than with the hens. Now you should cut off about one-half of the mixed seeds you give the hens, and give only a little egg-food twice a week, and for one day six drops of syrup of buckthorn in the water. In the case of the cocks, give a leaf of dandelion daily, and add six drops of aromatic sulphuric acid to the water every second day for a week. Do not be too anxious about starting immediately. The cocks will doubtless be ready in good time now; and the above treatment should prevent the hens getting any fresher. As the treatment you have begun for the Yorkshire that is moulting is doing good, you had best continue it.

Nest Pans and Breeding.

Elm.—1. I should certainly not advise you, when putting up birds in cages, to use the wicker nests. I should give unglazed earthenware pans of a proper size for the birds kept in first place. The ordinary wooden Norwich nest box, second place. The wicker nests I should place last of all, only falling back upon them when no other were available. 2. Yes, you should succeed very well in breeding one cock with two hens in a three-compartment breeding cage. When putting them up ready for mating, place the cock in the centre, and a hen in each end compartment. The centre compartment is then available as a nursery for the young of either of the hens as may be required. 3. As to whether you would be right in pairing up on the third Saturday in March depends solely upon the condition of the birds, and in a minor degree upon the weather. If the birds are in breeding condition, and the day is a fair one, I should answer yes, decidedly. On the other hand, if the birds are not in condition you would gain nothing. Whatever the date may be, birds should not be mated up until they are in the proper condition. I prefer a nice bright day which is making the birds bubble over with life for putting the pairs together, though this may be only a whim.

Three in One.

"X.Y.Z."—1. The fact that your bird-room faces north-east, and thus gets but little sun, is no real bar to your success in breeding, providing the room is free from damp and is not draughty. Given the latter condition it is quite possible to do much better with this aspect during a hot sunny summer than in a room facing south, as the birds are not so apt to get fagged. A cold, sunless season would doubtless tell against it to some extent. 2. I take it your breeding cage is one of the old, so-called London pattern which has one end partitioned off and made into a box-like compartment to contain the nest. If this is so, I should certainly advise you to discard it, and use a modern type of cage, with earthenware nest pans. Better get the lined pan, but give the bird a cowhair nest-bag to line it again to her taste, or she will probably tear out the lining provided for her. 3. Under certain conditions of health it is decidedly risky to allow the birds to bathe freely in cold water at this variable season. If they show any signs of chill after bathing, it is best to make the bath tepid, and give it only on mild days about twice a week.

Various Indeed.

Very Anxious.—1. You would probably do very little good by keeping cocks and hens together in a C.P. aviary. The hens would be almost certain to want to nest, and any attempt to do so would be just as certainly doomed to failure. Unless you wish to encourage them to breed you should keep the sexes separately; and if you do wish to try breeding, you should either mate up in breeding cages, or in a larger aviary than the C.P. type. 2. Feed on a mixture of two parts Canary and one part summer rape as a staple. Give a little egg-food, or bread and milk, a few grains of hemp, and a small quantity of scalded rape, each once a week; green food or sweet juley fruit daily, fresh pure water *ad. lib.*, and bathe every second or third day—increased to every day when the weather gets warm; gritty sand in cage regularly. 3. Training Rollers to sing means placing the young cocks, as soon as they are able to do for themselves, under the tuition of old and correct singing birds, or bird organs, in order that they may learn to sing the classical Roller song instead of the harsh screeching notes which are natural to the average domestic Canary. Whilst under tuition they should not be allowed to hear any other bird sing but the pure Roller, or the mechanical bird organ, as the case may be. 4 and 5. The answer to No. 2 will apply equally as well to Norwich and Yorkshire, save that the birds will do better with half the quantity of rape, and it may with advantage be omitted altogether, except a pinch given separately two or three times a week. 6. The answer to No. 1 as regards keeping the sexes separately is applicable here. Even if you had the birds in a large aviary to breed, you could not allow Norwich and Yorkshires to fly loose together if you wished to keep the breeds pure. They would interbreed one with another. 7. If quite sure the cage would be in no draught, there would be no objection to keeping it on table in front of window. 8. From a week to a fortnight hence is a good time to start pairing up if weather is reasonably fair, and the birds in breeding condition. 9. The sexual differences are the same in all varieties. The cocks are more alert, bold, and defiant in appearance, have a bolder eye, and a clearer and more metallic ring in voice when "tweeting." When singing the throat swells out and throbs as the notes are produced very plainly. External differences are very small and quite comparative.

Two Cock Birds.

"Puzzled."—No. 1 cock has had a chill, and you are probably keeping him in a colder place than he has been accustomed to, or where he is exposed to draught. These causes must be removed before you can expect a cure. Stop all the many things you have been giving. Feed on plain Canary seed, and give separately a few grains of hemp once a week, half a teaspoonful of scalded rape, and a small piece of sponge cake slightly moistened with sherry, both twice a week. In the drinking water give ten drops of glycerine and two of eucalyptus oil every second day until the hoarseness is removed. When you give this you must watch the bird to see if it drinks when thirsty—some birds absolutely refuse it. 2. This bird which "throws up his food" and puts it on the perch, requires another month in which to put it right. In other words, he is in excellent condition for mating, and very anxious to do so; that is all. If you have a hen that is equally forward I would advise you to mate them without further delay.

Is it Asthma?

Evelyn Wright.—Very likely it is asthma that troubles the Canary, which sits bunched up, makes a squeaking noise, and does not sing much. The condition of this bird and the other one which is losing its feathers is strongly suggestive of the birds being exposed to chill or draughts. You say you move them from the gas at night. Is it probable that in doing so you inadvertently place them in a decidedly colder place than they have occupied all day, or in a draughty situation? If so, you must remove these causes first of all. Give the cock that wheezes a small piece of sponge cake, with a few drops of sherry on it twice a week, and in its water give twenty drops of whiskey, ten of glycerine, and five each of syrup of squills and tincture of tolu, every second day until better. Give the one that loses feathers a teaspoonful of egg food twice a week, and add to the water twenty drops of chemical food two days in every three for a fortnight.

One Wheezy: Another Mopy.

"Barrell."—See reply to "Evelyn Wright" in this issue, and treat the Norwich hens that wheeze and make a sucking noise as advised for the bird that wheezes. Also carefully examine your cages, and see if red mites are adding to the trouble. Of course you must see that the birds are kept free from all draughts and chills. 2. Treat the hen that mopes about on the cage floor, "re-shelling empty seed husks" as follows:—For two days give as much Epsom salts as will cover a sixpence and six drops of lemon juice in drinking water each day, and after that give six drops of aromatic sulphuric acid and three of liquid extract of dandelion in the water every second day for a week. At the end of that time give ten drops of chemical food for a few days when it should be in good condition. Give a spray of green food daily, and do not forget to keep it supplied with gritty sand.

Mice, Egg and Rape.

Mrs. E. S. Parker.—1. I would not take the responsibility of saying without so much as seeing a specimen, whether the mice you are troubled with in your bird-room and which have long bristly hair, like miniature badgers, are a new kind of mice. But I will say that it is quite within the range of possibility that they are not mice at all—but voles. These are more in keeping with your description than true mice. Try the Danysz Virus. 2. About two-thirds of a teacupful of bread crumbs would be quite sufficient to add to one egg. Cannot say what would be the result of attempting to rear the young on bread and milk only, as I have never tried this plan. However, I am inclined to think that if the parents fed with it quite freely the method would be quite successful. I see no reason why it should not. 3. I really cannot say whether it is true as your seedsman tells you, that there is no German rape in the country on account of the failures of the crop. I only know that of all the many samples submitted to me the genuine article seems to be conspicuous by its absence.

Four-in-Hand.

'Shellback."—1. It is not necessary to use cages for breeding Canaries when they are allowed to fly loose about a room. The cages would only be in the way, filling up space that might be otherwise occupied. Any of the methods described in the recently published aviary notes might be adopted, or nursery cages, or the small wicker German travelling cages with three or four of the short bars removed, hung about the walls for nesting sites. The two last-named plans are very good, and help to prevent young birds being dragged out of the nests. 2. In putting up bushes and wicker nests as in the bird-room mentioned, you cannot prevent the young being dragged out sometimes. But then you really cannot prevent this happening when breeding in cages in the orthodox fashion, and when the birds have their liberty as suggested these accidents are not nearly so frequent as in cages. 3. No. There is extremely little risk of the birds breaking the necks, as you say. They soon get too agile for that. 4. Yes, the answer is "let 'em rip," if they like. But here again you will not find "tipping" occur so commonly, as to require the use of nurseries.

About Crests.

H. B. Stone.—1. I fear the Crest cock is constitutionally weak, and probably the swollen and red looking abdomen is more apparent than real, and due, perhaps, to the bird being scantily feathered. Try the following course of treatment and let us know the result. For one week give six drops of syrup of buckthorn in the water every second day; at the end of the week give six drops of aromatic sulphuric acid for one day. During the next week give fifteen drops of chemical food, and then six drops of the sulphuric acid as before in the water on alternate days. Feed plainly meantime, with a little green food each day, and report result at end of fortnight. 2. Your ill-fortune in breeding Crests was most certainly due to your trying to breed them without any assistance from feeders. It is quite futile trying to breed successfully high-class and valuable Crests, above all others, without feeders. By all means try again. At the same time as you mate up the Crests, pair up at least as many of the common hens as you have pairs of Crests. A still safer plan is to pair up three of Crests. A still safer plan is to pair up double the number of common hens in order to increase your chances of always having a foster parent available for the Crests at any time one may be required. You may either allow the Crests to hatch out their own eggs and transfer the young to a suitable foster parent when a day or two old, or you may exchange the eggs of the common hens for those of the Crests during incubation. The latter would probably be the better plan for you to adopt. If you have plenty of feeders allow them only two or three young Crests each to bring up, in order to give them the best chance for growing.

Rather Varied.

"India" (Partick).—1. The yellow Norwich cock had perhaps been bitten on a claw by a mouse. I had an exactly similar thing occur not long ago, and discovered without a shadow of doubt to my own mind that this was the cause. It was only by catching the bird and examining the claws very closely, that the almost microscopic wound between the scales on one claw were discovered. 2. From the mating you suggest, assuming your birds are bred from clear and ticked parents, you will breed clears and ticked—the majority either clears, or but very lightly ticked. If, however, the parents of your birds were variegated, or one a green, you will have a smaller proportion of clears, more than are ticked boldly, and here and there a lightly variegated one. 3. Sample of seed did not come to hand, so cannot say anything about it.

Result of Post Mortem.

A Bird Lover.—I think the very best advice that could be given you is to clear out all your birds, with chloroform preferably, thoroughly disinfect the place, according to instructions given in the "Note-Book" as before advised, and start afresh with new stock after a time. The fact that you are still losing the birds every week should be sufficient proof that it is infectious, and to dispose of the birds to others would, of course, not be right, as it would certainly spread the disease. If, however, you wish to hold on to them, isolate all healthy specimens, clean and disinfect room and cages thoroughly, observe the most scrupulous cleanliness, keep the cages well strewn with fine sawdust, which burn when removed from the cages. Cremate at once the bodies of any that die. Feed the birds on plain Canary seed with unlimited green food, a teaspoonful of scalded rape, and a few crumbs of sponge cake twice a week. Three times a week dissolve a piece of sulphate of soda the size of a small pea in the drinking water, and twice a week on days alternating with the above, give six drops of aromatic sulphuric acid. I should not advise you to breed with these birds.

Are Things Going Right?

R. W. G.—1: Yes, I think your pair of birds which are mated, and have kept having "little tiffs," are doing all right. It is not altogether a bad sign when they have these miniature quarrels, but in your case, as the hen is often the first to break the peace, and you have not yet given them a nest-box, the cause may be that the hen requires that receptacle to work off her energy in building. 2: As answered in the above. Put in a nest-pan, and just a tuft of nesting material. When you see the hen taking the latter into the nest-pan and calling to her mate, give a full supply of material for building. 3: Canary seed you sent is very small and poor, and does not seem to have been well stored. You should have no difficulty whatever in getting a much better sample than this.

Bare-necked Hen Feeding.

"Thirsty for Knowledge."—The hen whose feathers have not grown on the neck since moulting was scarcely in a proper condition for mating. Still, many of these rough plumaged birds are active enough, and as your hen has gone to nest so freely there is no reason why she should not be able to feed her young if any are hatched. You can do nothing to try to bring on the feathers whilst she is breeding. If she fails to bring off any young examine birds and cage well to see if insects are the probable cause. Give a small piece of bread and milk with a few drops of cod liver oil emulsion on it twice a week, and every second day give twenty drops of chemical food in the water for two or three weeks.

Patience Needed.

R.E.D.—The Yorkshire cock seems to be in rather a bad way. He is probably in an overfed condition, too. Limit his diet to Canary seed and green food only for a week or two. Give a teaspoonful of seed daily, not more, and green food, watercress, or dandelion, ad lib. In the drinking water give as much Epsom salts as will cover a sixpence, and ten drops of whisky every second day for a week, at the end of which time give six drops of aromatic sulphuric acid for one day. Continue after that for another fortnight by giving one day a dose of salts as above, but without the whisky; next day twenty drops of chemical food; third day, pure water. Repeat this over again, and again for the time stated. You should not think of mating the bird whilst in this condition.

Sample of Egg Bread.

Feeder.—The sample of food you send contains far too large a proportion of fat, in my opinion, to make it a suitable food for regular use, such as rearing young birds upon it, instead of egg food, as generally understood. For occasional use I see no objection to it at all, as I should imagine the birds would be fond of it, but I do not care to take the responsibility of recommending it as a substitute for properly prepared egg food. The other prepared food you mention I should prefer to the sample you send, if only for having much less fat in it, which I consider the most objectionable feature in your sample.

Mating Query.

W.T.M.—You would be most likely to attain your object in breeding some clear and lightly marked birds by mating the clear yellow cock alternately with a clear buff hen, and the Broken Green hen; and the Broken Green cock mate alternately with the two clear buff hens. In this way you would also get a useful stock of material for next season's mating. Next year you should mate up a pair of the variegated to keep the green blood going strong.

Improving Size of Norwich.

Aylesbury.—You could doubtless improve size of Norwich Plainheads at once by mating with a Crest-bred, as you suggest, but don't do it. What you gain in size you will more than lose in type, feather, colour, and Norwich quality generally. You should be able to get any amount of size you require in your Plainheads by double-bulling a few times; that is, mating buff to buff instead of the orthodox method of buff to yellow. Get a good, typical buff cock or two, as fine in feather as possible, and as large as you can find without sacrificing good Norwich type, and mate them to buff hens. Next year mate their progeny in the usual way, with your own birds, still keeping one or two pairs of double buffs going, and repeat process each year, until you have sufficient size in your stock. You will doubtless see a good improvement in the pro-

ny of the second mating of double buffs. Keep enty of green or variegated blood in the birds nlst mating on these lines to prevent the colour sing too much tone.

Brevities.

Yorkshire and Norwich (Jack).—The Yorkn cock has caught a chill in some way. Once at the cause of this is removed, and give twenty ops of whiskey, ten of glycerine, and six sweet irits of nitre in the drinking water for a few ys. Omit the egg-food for the present, and give stead a small piece of sponge cake moistened ghtly with sherry twice a week. For the Norwich m give a little sponge cake and sherry as for ne cock twice a week, and every second day for week add five drops of tincture of steel to the ater.

Age to Breed (Gordon Harrier).—Canaries bred he season are quite fit for breeding themselves he next. There is this exception that it is wise observe, that large breeds, if bred late in the ason, should not be mated early the next year. is best to let them attain ten or eleven months age at least before mating them. As a rule, he best results are obtained by mating two-year-ld birds with one-year-old. From this last remark you will gather that it is quite possible for ou to succeed in breeding with the eighteen-nonths-old Roller cock and the eleven-months-old Yorkshire hen.

Is it too Late (G.G.).—No, certainly not. On he contrary, your Roller cock which is just come n breeding condition is quite up to time, and if ou get a suitable hen, as you suggest, feed her p for a fortnight or so in order to get her in qually good condition with the cock, and then nate them; you will still be making a sufficiently arly start. You may see two good handbooks advertised in our pages every week, either of which he publisher would be pleased to send you direct; or you could obtain them through your newsagent.

Antrim.—A box pattern cage—that is, one with wood back, top, bottom, and ends, with wire in front only—is the best type of cage for breeding generally. For single cages, 20 in. long, 16 in. high, and 11 in. deep is the usual size. Double this length, and the same height and depth for double-compartment cages. 2. Your birds which throw out their seed have probably been fed on a mixture of different seeds before you had them, and throw out the Canary seed now to look after other kinds. The seed you sent is very nice, and quite good. Give as much Epsom salts as will cover a sixpence and six drops of lemon juice in the water for two days, and after that six drops of aromatic sulphuric acid every second day for a week.

Veritas.—Your birds appear to be coming on steadily, and will probably be in condition in good time. Give all birds six drops of syrup of buckthorn in the water for two days, and then 20 drops of chemical food for a day or two. Give the cocks a pinch of bemp seed, and a teaspoonful of egg-food twice a week; and the hens should have a teaspoonful of egg-food once a week, and a pinch of inga twice a week. You should not mate them until they are ready, no matter what date it is. See other replies on same subject.

W.H.W.—It is not unlikely that your birds' condition may be due to over-feeding, but as you give no details on the subject I cannot tell where you go wrong. Give as much Epsom salts in the water as will cover a sixpence every second day for a week. During second week give six drops of aromatic sulphuric acid twice, and, if necessary, repeat the two week's treatment over again in same order. Feed on plain Canary seed as a staple, and give the cocks a few grains of hemp twice a week, and a small teaspoonful of egg-food twice a week. Give the hens a little egg-food once, and a pinch of inga twice a week. Give a spray of watercress or a leaf of dandelion each day.

Blood Blister (F. Birkett).—Sorry I cannot tell you what will cure a blister full of blood on the shoulder of your Canary without having some sort of idea as to the cause of it. You should have said under what circumstance, and when, it first appeared. It is just possible the wing may be broken, or it may be an abscess. Keep the bird quite quiet, in a cage by itself, and just lightly touch the blister daily with a carbolised vaseline, or Zam-buk ointment. If the blister breaks bathe in a warm solution of permanganate of potash, and slightly smear with boracic ointment daily.

Removing Canaries Outdoors (W. H. W.).—You have omitted to fill in the dimensions of building you wish to convert into an aviary, and you say nothing about the position and aspect—very important points to consider. If in a reasonably sheltered spot the building should be quite warm enough for the ordinary run of Canaries without being lined with wood. As it has been used for rabbits, I should advise you to give it a good washing down with fairly strong carbolic fluid in order to remove the taint of the rabbits. The door, ventilation, and practically all other points of your letter, you will find dealt with in the aviary notes on our novices' page the last two or three weeks. 2. You may either put a few quassia chips as you buy them into water at night and use it for the bath next day, or you may put a smaller quantity of chips in a vessel, pour hot water over them, and use for bathing as soon as cold. If the infusion is too strong, dilute it with more water.

Wets his Perch (J.S.).—Your Norwich cock, which has started wetting his perch with something out of his beak is only in a forward condition, and ready for mating. The saliva, as you term it, is simply partly digested food which the cocks bring up from the crop, and feed to the hens when mated. Your cock having no mate, puts it about the perch and toys with it instead. It is not a "complaint" at all, and is quite harmless; therefore, you do not need any remedy.

Hen Sneezing (R.H.).—There cannot be much wrong with this hen, as it is so bright and active. Perhaps she feels a little draught sometimes to cause the sneezing. Give her six drops of glycerine and two of oil of eucalyptus in the drinking water for a day or two. Discontinue giving linseed and give a small pinch of inga seed twice a week instead until the birds are mated.

Questions of Temperature (Beginner).—1. If you are using artificial heat at all about sixty degrees Fahrenheit should be the heat aimed at for breeding any variety of Canary. This should be kept as regular as possible, and in any case it is best not to let it drop below fifty-five. 2. This question is incidentally answered in No. 1. I should not care to pair up at this time of the year simply because the temperature reached fifty degrees. It would be much safer to raise it to fifty-five and keep it as high as that at the least as suggested in No. 1.

What are they? (India, Partick).—1. No. the produce of a Norwich Plainhead mated to a Norwich Crest would not be genuine Crestbreds. They would be first cross Crest and Plainhead, and would have to be mated back to the Crest several seasons before they could be called pure. You could gain nothing I fancy, by making such a cross in these days, and would lose a good deal. By the bye, the term "Norwich Crest" is rather a misnomer now. The Crest is simply the Crest, without any prefix. 2. By mating the first-cross as above to Crest you would breed birds with crests and others without crests—Crestbreds—but both would in all probability be inferior to birds which had not been crossed. 3. Yes, the Crest, and Crested Canary are one and the same variety. The Crestbred is bred intimately with the Crest. It has dense and long head-feather, and overhanging eyebrows, but not a proper crest. The usual method is to pair a Crest with a Crestbred, and birds of both varieties are produced by this mating, and in the same nest.

Out of Condition (W.H.C.).—Room is either draughty or damp, or is much colder than the birds have been accustomed to. Both birds may be treated alike. See that the above causes are quite absent; give a small piece of sponge cake slightly moistened with sherry twice a week instead of egg food, a leaf of dandelion, or spray of watercress daily, and twenty drops of chemical food in the water two days in every three for a fortnight or so. On each third day give six drops of tincture of steel instead of the chemical food. You should not attempt to breed with the cock until it is quite well and in song.

Early Young (Worried).—1: As these same parents had young with deformed claws last year, and now have another in the first nest this year, it is not improbable the deformity may be congenital. You can do nothing for the young beyond putting the usual rubber band over the claws, to keep them in position for a few weeks. If these deformed young become frequent from the same pair, I should discard them for breeding, unless the young are of very good type. You might try giving the old ones a course of chemical food to strengthen them. 2: You should not replace the cock to start a second nest until you can separate young by some means. It should be a very easy matter to improvise a nursery cage out of any small cage, by removing a few wires and attaching it to the front of the breeder.

Recipe for Food (Regular Reader).—I do not care at all for the food of which you send a recipe, which, I take it, is intended to be mixed together, and kept in a dry state ready for use as required by slightly moistening it. I do not care for ground linseed in any food, nor crushed hemp, nor maw seed. All these seeds I prefer to give separately, and in a whole state—except the hemp, which may be cracked, but should not be crushed, when there are young to feed. Candidly, if I were catering for valuable birds, I should much prefer the old-fashioned egg food, with all its dangers, to this substitute.

Two Hens (W.R.L.).—Your hens are overfed, and No. 1 is suffering from constipation in addition. Stop the milk sops and tit-bits. Give a small quantity of egg food once a week only, for the next fortnight, with plain Canary as a staple, and plenty of green food. Give No. 1 hen in the water six drops of syrup of buckthorn every second day for a week, and twice during the second week, and twice in each week alternate this with six drops of aromatic sulphuric acid. Treat No. 2 hen the same as above, with the exception of substituting during the first week only ten drops of glycerine, and two of oil of eucalyptus for the sulphuric acid.

Hoarseness and Biscuits (Roller).—1: As you say the Roller cock is in good song and fine condition, you need not trouble about his "tweet" seeming somewhat hoarse. That will soon disappear now as the weather gets warmer. Still, you might give it twenty drops of whisky, ten of glycerine, and as much chlorate of potash in its water for a day or two as will cover a sixpence. 2: Almost any plain biscuit may be used instead of Osborne. Maizena are very good; and the lunch biscuit you mention would probably answer very well. If biscuits are too expensive, there is still the "staff of life," crumb of good household bread, to fall back upon.

Swollen Eye (New Beginner).—As you have just mated the bird, it may be just possible that the condition of the eye is due to a peck, or an accident of some kind, when the birds were having some horse-play. If this surmise is not correct, there is probably a tumour growing close to the socket of the eye. For this you can do nothing yourself, but when the growth is ripe for removal, if it is a valuable bird, and worth risking something on, a veterinary, or even your medical man, might be prevailed upon to remove it. You might leave the cock bird with the hen until she has commenced to sit, then remove him, and let the hen hatch and rear by herself.

Roller not Well (Roller, Leeds).—I do not think you will do much in breeding with this bird just yet. It is most likely going into moult, and the probability is after its performance the last few months that it will not survive the ordeal. You did wrong to mate it up yet awhile, knowing that it had not moulted. I should advise you to move him to a cage by himself as soon as the hen has commenced to sit. Feed on plain Canary, with a half-teaspoonful of egg food twice a week, in which four or five drops of cod liver oil emulsion have been well mixed, and twice a week give about same quantity of scalded rape. Give a spray of watercress or leaf of dandelion daily. In the drinking water give a few drops of whisky and as much Epsom salts for two or three days as will cover a sixpence, and after that give six drops of aromatic sulphuric acid two or three times a week.

Cold in Eye, and Moulting (Moulting).—1: See that no draughts find a way into the cage and dissolve a teaspoonful of boric acid in a breakfast cup of hot water, and when cold, allow a few drops to trickle on to the bird's eye each day until better. Add half a teaspoonful of whisky and a little Epsom salts to the water for a day or two. 2: It depends upon the age of the bird, and whether it moulted at the proper time, whether a bird that is moulting now will moult again this year. If it is an old bird, and did not moult in the autumn, then it will probably go on moulting in the spring in future.

Seed Samples (J.P.S.).—No. 1. Canary; is a very nice, bright, good-sized seed. Not quite so plump as some samples, but for all practical purposes equal to the very best. It is cheap at the price you give. No. 2 and 3 are practically the same quality. Both are very sweet and clean samples, but very small, and much dearer at the price quoted than No. 1. No. 4 is not a good sample of rape. The grains are rather shrivelled, and it is much too strongly flavoured for my approval. No. 5 is certainly a mixture, and not pure rape, and is inferior to No. 4. I should reject both samples of rape myself. No. 6 contains only two kinds—the light brown, which is gold of pleasure, and the shiny black, of which I do not know the name. The dull black which you thought was seed are particles of dirt. A pinch of this given to Canaries occasionally does no harm as a change, but it must not be used liberally.

The Usual Pest (Avis).—See replies to "South Devon" and "Don't Know" in this issue. Your cage will probably now want a thorough overhauling. It is perfectly useless trying to eradicate insects by catching them on cloths, etc. Nothing short of drastic measures will accomplish that object. This matter has been fully dealt with on the novices' page. Many weakly birds are affected by cold baths this weather, and doubtless your hen is one of them. Give her tepid baths only, and be careful she does not get a chill afterwards. You may use essence of quassia for destroying insect pests in two ways—either by brushing over the ends of the perches, joints of door, and any likely harbouring joint, with the strong essence once or twice a week, adding a few drops of the essence to the bathing water, or by soaking a few quassia chips in the water for the bath a few hours. If made too strong some birds will not use it, in which case a little may be sprayed over them, and a weaker strength given in the bath.

Mate for Cinnamon-mark ("A Novice").—You omit to say what class of birds you wish to mate. As the Cinnamon-marked Norwich is probably a very fair specimen for breeding purposes I should advise to mate her to a clear yellow, pink-eyed cock. If you know it is bred from a Cinnamon marked strain so much the better. The object of this mating will be to produce even marked Cinnamon-marks, for which your hen seems well adapted. I cannot tell you the price, as that depends upon the typical points of the bird and upon its value as a breeder to the vendor. You might get such a bird from a dealer at from 10s. 6d. upwards. I should, however, advise you to get one from a known breeder of Cinnamon-marks, who would be able to tell you how it was bred.

Hen Out of Condition (C.S.).—You are feeding up too well. You should be giving the egg food not more than twice a week, a pinch of a mixture of rape and niger twice a week, and a spray of watercress, or a dandelion leaf, daily. Examine the cage carefully to see if the bareness is caused by insects. If the feathers have dropped out, give twenty drops of chemical food in the water every second day for a fortnight, and add five drops of cod liver oil emulsion to the egg food each time.

Training Rollers (Jones, Walsall).—It will be far the best to remove the young cocks as soon as they are able to do for themselves away from the hearing of the old birds, or of any other birds. Keep them in a room by themselves where they will hear only the strains of the organ. For a few weeks, whilst the birds are in the first stage of tuition, and during the moult, you should partly draw the blinds, so as to concentrate the bird's attention upon the organ sounds. The only really correct way to describe the young when advertised would be as "English bred and trained Rollers." You might add the name of the strain, if any, your birds were believed to be. The price would depend solely upon the vocal abilities acquired by each individual bird.

Uses of Seeds (No name).—Too big a question to deal with here. Better watch our novices' page for a few weeks. There was also a lengthy series of articles on seeds in CAGE BIRDS about two or three years ago which might interest you. Probably the Editor could send you the back numbers.

Samples of Seeds (B.P.).—No 1. Is extremely small, badly flavoured seed, dear at any price. No. 2, also very small, but sweet and good, and quite fit for use, although a larger grain is much better. No. 3. Practically the same as No 1. No. 4. Not quite so sweet as No. 2, but otherwise is practically the same. No. 5. This is a very fair sample, the quality equal to No. 2, and the hulk of seed much larger in grain. It is decidedly the best sample sent, though better may be obtained. But this is quite good enough for all practical purposes. No. 6. The mixed seed. As an occasional tit-bit for Canaries it would be improved by reducing the linseed one-half, doubling the quantity of hemp, and reducing the gold of pleasure two-thirds and doubling or trebling the quantity of rape if rape is not given in the staple food. In case it is then no further increase is necessary.

Remedy for Red Mite (Don't Know).—The best way to keep red mite down during breeding season is to start with as clean a sheet as possible, by thoroughly overhauling the cages and the places where they are kept before starting, as was described in detail in the novices' page a few weeks ago. For regular use dissolve an ounce of camphor in half pint methylated spirits and touch the ends of the perches, and other places where mites are likely to congregate, with a brush dipped in the fluid once or twice a week. Brush nest box over with it when giving fresh nests.

BRITISH BIRDS, MULES AND HYBRIDS.

Answered by G. E. WESTON.

Linnet-Canary Muling Couple.

Mid.—1. The stock seed mixture of your Linnet and Canary couple (if you are keeping the two birds together) should be Canary and teazle, one and a half pints each; summer rape and charlock, half a pint each. Then make up three mixtures as follows:—(a) Hemp, two parts; niger, one part; linseed, half a part by measure; (b) maw, thistle, dandelion, gold of pleasure, and lettuce equal parts of each, likewise by measure; (c) a good wild seed mixture. A heaping teaspoonful of one of these three mixtures should be given the birds every day (in a separate vessel; not with the stock mixture), taking them in turn. This treatment will bring them into the best possible condition, providing the birds are in good health, and are being kept under proper conditions. Egg bread should not be given unless your Linnet is very near breeding condition, which you can tell by his song and the colour of his beak, as it will only bring your hen to nest before the Linnet is fit. All the early, young, tender dandelion leaves you can find should be gathered, likewise shepherd's purse and chickweed, and a good feed be given the birds daily. If they don't breed under this treatment, they will never breed at all. If you are keeping the hen Canary apart from the Linnet, let her have plain Canary seed one day, and the above mixture the next. You need not give her the wild seeds, but she should have a little of the other two (a and b). 2. The birds you caught (if the size of big Chaffinches) would be Bramblefinches. Your description is very meagre, though; you don't even state size.

Keeping a Nightingale

Daulias luscinia.—Personally, I consider a Nightingale quite an easy bird to keep. The great essentials are a high-class insectivorous mixture, properly prepared, and a liberal, regular supply of live-food (varied as much as possible). They cannot be kept alive "cheaply"—that is a point to be borne in mind. I am speaking of properly "meated off" Nightingales, of course, as the getting of fresh-caught birds on the artificial food successfully is no easy matter, takes time, and costs more than a little in live-food. Just when you seem to have got them safely through, they are most liable to "go into a decline," as the old writers put it—that is, after you have spent some three laborious weeks on them. The best time to purchase is just after they arrive in the spring; but make sure the bird is properly "meated-off," as you seem to know nothing about them. It would probably be best if you got a hand-reared specimen, though their song is not so good. Any first-class cage-maker will supply you with the correct pattern of Nightingale cage—one with swing-in inside food and water vessels. A newly-caught bird should be kept in a cage with a canvas (false) top. They should be kept in a warm room in winter. Briefly put, my own methods of keeping Wagtails, Blackcaps, Nightingales, and similar small insectivorous birds are as follows. As a stock mixture:—Powdered Osborne biscuit, three parts; best ants' eggs and dried flies, two parts each; powd red silkworm pupæ, one part; meat meal, half part, by measure. Take the quantity required of this, and mix it just crumbly moist with grated raw carrot, or finely chopped lettuce, watercress, or chickweed (use young leaves only), or cold boiled potato, varying it frequently. It is necessary, of course, to give, in addition, all the live insect food (flies, spiders, wood-lice, earwigs, small beetles, smooth caterpillars, green-fly, live ants' eggs, etc.) one can possibly obtain; mealworms given regularly are indispensable. To the above stock mixture I occasionally add, after damping, a teaspoonful or two of preserved egg-flake, or part of a hard-boiled fresh egg, finely minced, and, more occasionally still, a little finely scraped raw lean mutton or beef. Good cream cheese is a splendid food, too; give a little, finely chopped, and mixed, of course, with the above biscuit food, or just laid on top of it. Maizena wafers may be used in place of Osborne biscuits; or, for economy's sake, the "broken biscuits" (sweet) obtainable very cheaply from most grocers. Excellent ready-made foods, too, may be bought through our columns.

Identity of Bird.

J. R. Slack.—Don't go running away with the idea that you have caught a Thrush-Blackbird Hybrid, or even a rare-feathered bird, for the strange specimen you captured is only the Redwing, a member of the Thrush family, which visits us from the far North in the winter-time. The distinct white eye-brow, orange colour on the under wing coverts, and reddish patches on the flanks, reveal its identity at once. Redwings are not uncommon on the show-bench.

Unknown Crosses.

E. Jones.—If you want to try for something startling how would the Cross-bill-Hawfinch mating do? Other unknown crosses that would "pay" to produce are either Hawfinch, Crossbill, Siskin, Chaffinch, or Bramblefinch-Bullfinch Hybrids. I am trying for the first and third myself; and a friend tells me he is trying the Crossbill-Hawfinch mating. Your "fondness for experimenting" could not be better employed than in endeavouring to breed the above.

Aviary Breeding for Profit.

A. Sawer.—Don't remember seeing your query before. I really couldn't undertake to tell you how to stock your aviary to "breed Mules for profit." I am not at all sure it is possible to guarantee there shall be a profit, no matter how you mate the birds. Of the hens you enumerate, the Chaffinches, Yellowhammers, and Bramblefinches are unlikely to be "profitable"; the same may be said of the cock Yellowhammers and Bramblefinches. The best advice I can give you is to put in mainly hen Canaries, with two or three hen Bullies and one hen Chaffinch, and to turn in to them the Goldfinch, Linnet, Redpoll, Siskin, and Greenfinch cocks, with one cock Bramblefinch. Twelve to fifteen birds (not pairs) will be plenty.

Mealworm Breeding.

G. Morris.—It takes from six to 12 months to get a breeding box of mealworms into full swing. A very big tin box (such as an extra large biscuit or tea tin from the grocers) is suitable, and should have two rows of holes bored with a bradawl right round the sides close to the top. Fill two-thirds full with alternate layers of pieces of dry coarse sacking and bran. Turn in a pint of good, healthy mealworms, and store away in a warm spot (this is important), adding fresh bran from time to time. By getting a supply of mealworm beetles, time may be saved.

Some Aviary and Other Matters.

"Agnes."—If your outdoor aviary, which you say is 4 ft. wide, 4 ft. from back to front, and 6 ft. high, had a second floor midway between the top and bottom, so as to make it into two separate aviaries, one above the other, you would be able to breed with just about twice as many birds. As it now stands, being quite small and with a limited floor space, I should scarcely advise you to put more birds into the whole space than you might reasonably expect to keep in each section if it were divided as suggested—that is, one cock and three hens, for which five or six nesting places should be provided. This replies to your first question as well as your prefatory remarks. 2. Yes, you could put three hens with one cock in such a place as yours, but the cock should be a strong, healthy, and vigorous bird. 3. You say the Yorkshire became blind through a chill; I should hardly expect that to be the real cause. If he is quite blind you run a very great risk of failure by attempting to breed with him. Unless he is a very superlative specimen I should strongly advise you not to do it. 4. You could breed Mules with the Goldfinches in the aviary just as easily as you did in cages, perhaps more so, and there would be no necessity for removing the Finches whilst the hens were nesting. 5. It would be preferable to move all save one or two of the swing perches, and put in a firmly fixed one for breeding birds. Keep the fixed perches near the nesting sites.

Hybrid Breeding Cages.

A. McWatt.—The single Hybrid breeding cages I myself use are about 30 inches long, 17 or 18 high, and 14 deep (one or two are larger). I am dead against smaller cages, for they get very dirty in next to no time, and occasionally it would be very bad policy to disturb Hybrid-breeding couples by cleaning them out, and in a large cage a few days' neglect in this respect makes no matter. I have two perches in, on the crossbar, the birds feeding from the cage bottom. There is one door in the centre of the front, at the bottom (as usual), and another at the right-hand side of the front, above the crossbar. Both are made extra wide. A "platform" of wire-netting runs from the crossbar near the latter door to the back of the cage. It is 5½ to 6 inches wide, and the netting is tacked to a piece of wood, which is screwed to the cage back, and wired to the crossbar at front. This "platform," if thickly interlaced and strewed with sun-dried grasses, or chickweed, etc., affords a fine place for the hen to lay her eggs on; or on which to lodge the favourite old Thrush or Blackbird nest, [illegible] to recline (some don't trouble to do the latter). A more or less cup-shaped depression is easily contrived in the dry grasses, and the latter may be easily removed (or so much as is necessary) as required, being get-at-able through the [illegible] door. My hens, and have no fear of eggs dropping on bottom of cage, I cover the latter with finely teazed-out peat-moss litter. If a strange

hen, or one which behaves doubtfully, I use a thick layer of dried grasses, as above. The latter has great advantages over sawdust, etc., as it is not easily swept aside by the movements of the birds, thus leaving patches of the cage-bottom uncovered. It is very "springy," too, and catches an egg safely. The crossbar and the perches, by the way, ought not to be placed very high up in the cage. My favourite way of screening the resting site is to bang a strip of thick, stiff brown paper over the particular corner of the cage. In our last Birthday Number two excellent photographs of a "screened" Hybrid-breeding cage appeared.

Which shall the Lady be?

Novice.—It is really a matter of little moment whether you pair the German hen with the Goldfinch, or whether you make the buff Yorkshire hen over to him. Both will produce you excellent singing Mules, especially if reared under a free-singing, good-noted Goldfinch or Linnet, or both. A "mixed" song is very pretty, to my mind, providing nothing beyond "good songsters" is desired of the youngsters. In all probability the Mules bred from the Yorkshire hen would be the larger. As regards singing qualities, there would be nothing to choose between the two. So you had better, all things considered, use the hen it best suits your other plans to set aside for Mr. Goldfinch. Feed the young Mules just the same as you do the young Canaries, but allow the seeding wild plants, such as chickweed and shepherd's purse, in liberal quantity daily. A cage 30 by 18 by 12 inches is a splendid size for a Muling couple; I wish every breeder had the good sense to adopt such. Thanks for your kind remarks; always pleased to help.

Chaffinch-Canary Hybrid.

W. Scott.—You are mistaken—I certainly know of the reputed specimen you mention. I was the first judge it was exhibited under, as a matter of fact (at Dulwich and Peckham Show), and, after careful inspection, I came to the conclusion that it was a rare-feathered Chaffinch and not a Hybrid at all. You yourself seem unaware of the fact that this bird has been exhibited at two shows since then (including the Palace) under other judges, but without securing any prize, which, had the judges considered it what it is stated to be, they would have been bound to have awarded it.

Many Birds Lost.

F. Nunn.—I see nothing whatever in the structure and fitting-up of the aviary to account for the extraordinary loss of birds you have met with. The only possible explanation seems to me that you have inadvertently introduced some contagious disease into the place with one or other of your purchases. You should have the dead body of one of the birds examined by our Mr. North, who would tell you whether some infectious complaint was responsible for its death. Sorry to hear of your experience, which I agree is disheartening.

Goldfinch's Tail.

A.H.L.—The tail of a bird is very easily extracted by anyone not used to the handling of birds, or in the least "clumsy-fingered." You don't want to "hang on" to the tail—or even catch hold of it in such a way that the bird is left free to struggle. Still, accidents will happen. Another tail should be fully reproduced in from five to six weeks from the day the last one left home. It will not affect the Goldfinch breeding, as soon as it is fairly well grown, providing he is, of course, in the right condition.

Concerning the Skylark.

Larnov.—1: The best possible kind of house cage for a Skylark is that known as the "Lark runner." It should be as large as possible, say from 24 to 30 inches long by 9 high by 10 to 12 wide, food and water vessels hanging on the outside. 2: A good and economical stock food, the ingredients of which you can get from any up-to-date seller of bird foods or through our advertising columns (through which, too, many excellent ready-put-up foods may be had) is made of: Game meal (without grit) or crushed puppy biscuits, three pounds, finely ground silkworm pupae, half-a-pound meat meal, good ants' eggs and dried flies, a quarter pound each by weight. It will keep a long time. A few mealworms and other insects should be frequently given; also a little seed in a separate dish. This food can be moistened with a little water (it should be made crumbly moist, not into a sticky mass). But a little finely minced greenfood (chickweed, lettuce, watercress, etc.), or grated raw carrot, or mashed cold boiled potato are by far the best. Clover grass (either a turf of it or some chopped fine and mixed in the food) is one of the best possible things to give a Skylark to make it sing, and keep it healthy, also to assist it during the moult. 4: Larks do not require fruit, but should be given live insects freely, according to season—mealworms are very much liked. 5: To deal with contest singing here would need far too much space. Send the necessary cash to our manager for the back numbers of Cage Birds which contain a splendid article on this subject written by that "old hand," Mr. Allaway.

Brevities.

Wild Seeds (Succory).—Both are good samples, and quite suitable for use with birds in an aviary. If I had to make a choice, I should select No. 1, which has had some thistle and dandelion seed added. No one could name the weeds which have contributed to the mixture, except by sowing some and identifying the plants when they grew.

What Is It? (A. Novice).—The bird you have got hold of is evidently a Bramblefinch—no other Britisher answers the description you give.

Feeding Goldfinch When Breeding (M.L.).—This seems a point I am often explaining. The "high diet" of the Goldfinch will not hurt the hen Canary when she is ready for nesting. One needs to avoid getting her too fat and "podgy" before egg-laying time comes round. As your Goldfinch has been used to it almost entirely, let him still have unlimited hemp seed, by all means; many of my own Finches will eat little else. Try him with teazle and niger, however; he is unlikely to refuse them entirely. Give flowering and seeding dandelion and groundsel, certainly.

Linnet Losing Feathers (B.S.).—I can't tell you what to do, because you state nothing likely to help me to arrive at the cause of the loss of feathers on the head. Is the bird in a cross moult—that is, shedding feathers freely—or is it troubled with red-mite? Do you keep it in a heated living-room? Is the bird singing, or does it sit mopy-looking and unwell? If you will give me a few details, shall be glad to try and assist you.

More Puzzlers (Ruby).—1. A Buff Mule bred from a Yellow hen, would probably be smaller than one bred from a Buff hen (everything depends on the hens, of course), but it would of a certainty carry a better colour. 2. Ordinary dark Mules, probably rich in ground colour, but a little indistinct in marking. 3. I have never seen either a Twite or Siskin-Bullfinch Hybrid—should like the opportunity. I should imagine the young of the latter cross would be very pretty.

Linnet-Canary Couple (C.F.).—The couple you describe ought to produce you some Mules in due course. A window is not a good place in which to place a breeding cage—it is usually draughty, and possibly passers-by may disturb the birds. A corner near a window is better. You must wait until your birds are ready; feed up as advised another querist this week.

Linnet and Canary (J. Lambourn).—The feeding is dealt with in reply to "Mid" this week. Hen Linnets most certainly sing in captivity when "fed up" into high condition, but not with the strength and continuity of a genuine cock bird. I really have no knowledge of the advertiser you mention. It is no use pairing up your Linnet until in "stout" song—that is, singing freely—and with a beak blue all over.

Larks "Weak" (Gordon Harrier).—I think your feeding is at fault (it is dealt with in another reply this week), and until you make their menu a little more generous and varied (introducing live-food and chopped green food, or suitable vegetable), you cannot look for permanent improvement. In two tablespoonfuls of drinking water for a fortnight (fresh daily) stir a small teaspoonful of Parrish's Chemical Food. Don't mix your queries (note rules).

Three Things (Dubious).—1. This certainly looks like genuine gold of pleasure seed. Possibly the first you had was cress seed, or some other resembling it. 2. The Chaffinch will take mealworms later on, I feel sure. Try small ones to commence with. 3. The state of the plumage will not affect the Linnet breeding, if his condition is otherwise favourable.

Chlorodyne (P. Blaxland).—Yes; I use chlorodyne with my birds whenever I think it advisable to do so, and am never without a bottle handy. The trouble is that fanciers generally give it too strong. Four to six drops stirred in two tablespoonfuls of water are ample to commence with, and its effects on the bowels should be noted, and the dose afterwards regulated by this. Try your bird with a course of chlorodyne, by all means. Stop the linseed, and give Canary, teazle and maw seeds only, with a few cracked sunflower seeds (shelled, if necessary), now and again.

A Thrush Trouble (G. Hewson).—The method of feeding is at fault, I am sure. Imagine yourself on dry bread always. You must vary the food with minced hard-boiled egg, and give some chopped green-food (lettuce, chickweed, etc.), or grated carrot, or cold mashed boiled potato, amongst it; also get the bird some suitable live-food frequently. Then you may expect to get some song out of your Thrush.

A Robin (A. H. Johnson).—A Robin is very easy to cater for, a good insectivorous mixture, properly prepared (see reply to "Daulias luscinia" this week), and some live-food regularly being all "Bobbie" asks. It is quite possible to keep one through the summer indoors. I have one at the present moment singing beautifully, and delightfully tame. The Robin's merits as a cage pet seem to me seldom properly appreciated. Probably sentiment is the bar.

Loss of Goldfinches (Querist).—Try a course of chlorodyne, as advised P. Blaxland this week. The seeds seem just fair. You should add niger and linseed to the stock mixture; it might help. The hemp is not as I like it, and this it is very important to get good, as Goldies feed so largely upon it. If you will send me your address I can let you know respecting the other matter.

Mate for Cock Bullfinch (Express).—You will find it difficult to beat a heavily green-marked Yellow hen of Norwich type, one of good size and build, as a mate for your cock Bullfinch. A hand-reared bird, the latter should be a good subject to try breeding with. I presume you know that the cock Bullie is generally held to be a bird unlikely to produce Hybrids? It is difficult to see why this should be so; yet no well authenticated case of its doing so appears to be on record in England.

FOREIGN BIRDS.

Answered by Wesley T. Page, F.Z.S., M.B.N.H.S.

Parrot with Wasting Growth.

M.E.D.—Give one teaspoonful of Dinneford's magnesia, every other day for a week or ten days; soak in a piece of plain biscuit or Madeira cake. Wipe out the bird's mouth (using a camel-hair brush) with the following mixture: Chlorate of potassium, 10 grains, glycerine 1 drachm. The brush must be well cleansed, and a fresh portion of the mixture used for each occasion. If the bird will let you handle it, keep swilling clean by bathing with warm water; wipe dry afterwards. Clean cage daily, and diet bird as advised regularly. The glycerine and chlorate of potassium should be well mixed together. Of course, if the bird's bowels should become very loose, you must cease giving the aperient. Do not give tea, coffee, or milk slops, table scraps, or any kind of animal food.

Foreign Birds with Canaries.

J. McGregor.—I must caution you against overcrowding. One square foot of floor space for each bird the size of a Norwich Canary must be allowed; the same space will be sufficient for two Waxbills or small Ornamental Finches. Zebra and Ribbon Finches, Java Sparrows, grey and green Singing Finches, long-tail Grassfinches. Saffron-finches, the chaste and minute Diamond Dove, Zebra, grey, St. Helena and Orangecheek Waxbills, and common and green Avadavats. Any of these will thrive on the seeds you name, with the addition of a few oats and a little paddy rice (rice in the husk), a liberal supply of green food, and during the breeding season some such soft food as you give the Canaries. Put up an ample supply of husks and nest-boxes, high up under roof, in shelter, and put plenty of perches there, too, and the birds named should take no hurt during the cold weather.

Aviary for Parrakeets.

P.W.R.—The shed will make an admirable shelter for the birds, and with such birds as the larger Parrakeets, covering all woodwork with ½-inch mesh (larger mesh permits the birds to get at the wood) is a necessity, or unexpectedly you will find your birds at liberty. If you have space, add a 12-ft. by 6-ft. or more high flight to your shed. Half of this should have a roof over it, and the remaining half open wirework. It should not be costly, the wire netting being the greatest outlay. Furnish with two husks, or nest-boxes (see advert. columns) for each pair, and plenty of tree branches, both in shed and flight, ranging from two inches thick down to about ½ inch, or less, in diameter. As to diet, supply a mixture two parts each Canary and millet seed, and one part each dari, wheat, oats, and hemp, with green food, cuttlefish and ample provision for a supply of clean water for drinking and bathing, would suffice for keeping Budgerigars, Cockatiels and Rosella Parrakeets in health. Get one pair green, and two pairs yellow Budgerigars, with one pair each Cockatiels and Rosellas. All would agree, but the two latter may not breed till next year.

Sexing Java Sparrows.

"White Java."—I should say the hen Java died egg-bound. This frequently happens with birds nesting at this time of year, and it is always advisable to remove the nest-boxes if they show any inclination to nest, and not replace them till early in April. It is not easy to sex a single specimen of Java Sparrow, not even for those thoroughly acquainted with them. The hen bird has got a narrower and more tapering beak than the male. This can clearly be seen when the bird is viewed in profile. As regards singing, as a rule, the hen is almost silent compared with the male, though this rule is not absolute, as I have possessed singing hens; but they are the exception and not the rule, and I am of the opinion that you have two cock birds. If there is no difference in the size and shape of their beaks, you may take it such is the case.

Sick Baby Parrot.

"Pretty Polly."—If this bird is eating freely of the dry seed mixture, do not give the boiled maize. Grey Parrots are better without it, so soon as they are able to take the seed mixture—you must decide this by observation. Give two doses of Dinneford's magnesia, half a teaspoonful in one tablespoonful of water. There should be a two days' interval between the doses. Afterwards put bird on a course of Parrish's chemical food, half a teaspoonful to two tablespoonfuls of the drinking water, which give for a month, at least. In addition to the seed mixture, give plain biscuit, crust of stale household bread, ripe fruit, a little boiled potato (dry), and a small piece of small carrot occasionally. Keep a piece of cuttlefish in cage. If the bird is eating heartily of the dry seed mixture, it is better without the boiled maize. You had better write again with fullest details, if the sickness becomes more pronounced.

Java Sparrows.

E. Wright.—If you will tell what kind of cage yours is, and what position it occupies, I shall be in a better position to help. Meantime, make drinking water just saline with Epsom Salts for one day, and afterwards lightly colour with Parrish's chemical food. Are you supplying bird grit? If not, do so. Also give a little green food, leaf of lettuce or stick a slice of ripe apple between wires, Canary, millet, oats, and paddy rice. But the first two will be the principal portion of their diet. If you give me the information asked for above, I will try and help you further.

Rearing Parrots in England.

"Maconochy."—Yes, Parrots can be reared in England, but you must understand that it is not like breeding Canaries. Once they begin to breed, they are less trouble to rear than the common Canary, but it does not follow that if you get a true pair of birds, and put them into an aviary they are going to commence forthwith. With the best of arrangements, they are often two or even three years before doing so. There is nothing to do, but to procure a true pair of birds, put them in an aviary, and wait their pleasure with what patience you can command. A pair of any large species of Parrots should have an aviary consisting of a 6 by 6 feet shed, and a flight of about 12 by 6 feet, furnished with suitable log nest and branches—all woodwork to be covered with wire netting. For the larger Parrots, it ought to be of thicker gauge than the netting usually retailed by ironmongers. See reply to P.W.R. Diet according to species, and as regularly advised in this column. If you give no particulars as to what species you require to keep, I could possibly be a little more definite.

Feather Plucking Cockatoo.

C. E. Western.—It will not be easy to cure your bird of this habit, which I have no hesitation in saying is due to the unwholesome diet you have been feeding it on, when, as regards the diet, it is stated almost weekly—"Do not give tea, coffee, or milk slops, table scraps, or any kind of animal food." For your staple diet, get the following mixture: two parts each Canary seed and oats, and one part each hemp, dari, wheat, maize, and sunflower seeds; in addition, supply ripe fruit, plain biscuits (dry), nuts, boiled potato (dry), and a little green food occasionally, such as lettuce, or other simple salad. Keep a piece of cuttlefish in the cage, and supply clear drinking water regularly. Give it three or four doses of Dinneford's magnesia, with a two days' interval between each dose—one teaspoonful of magnesia to two tablespoonsful of water—letting it have nothing but this to drink during the day. Spray the parts it is plucking with quassia solution, guarding against draught till it is dry. You must persevere with this treatment, but recovery will not, I expect, be rapid. The purpose of the quassia is to make the plumage taste bitter, and so check this annoying habit.

Another Feather Plucker.

Constant Reader.—Stop the mixed Parrot food. The seed mixture you are giving is ample, but for a time have half its bulk Canary seed. Also supply a piece of plain biscuit occasionally in addition to the ripe fruit you are giving. Something has caused the bird's blood to be heated, and its skin is in an irritating condition, hence the plucking. Note other replies. Give a few doses of Dinneford's magnesia—one teaspoonful in two tablespoonfuls of water. Continue to use quassia solution regularly; this certainly will help by making the birds' plumage bitter and distasteful to it. Give it cotton reels to play with, and rotten wood to chew up. Keep it where it will hear general conversation, and also teach it by constant repetition, it most certainly should both talk and mimic.

Treatment of Budgerigars.

G.M.—You do not say how many Budgerigars you have, but with the number of birds in your aviary, there ought to be at least six husks, and also a fair supply of other nesting receptacles to give any chance of successful breeding with any of the species. To the diet you are giving add oats, and in the summer as much grass in the car as they will eat. The husks, etc., should be fixed under the roof. They will undoubtedly breed a little later, providing you have a true pair, and also very probably mutilate and possibly murder some of your Finches for you. Be forewarned, and do not overcrowd. If you part with the young as soon as they can fend for themselves, very probably no harm will arise from such a mixture. They are omnivorous as to green food, and any non-poisonous garden weeds and hedgerow herbage may be given them.

Grey Parrot with Cramp.

P.H.B.—I fear it is more like paralysis than cramp. Keep it quiet and in a warmish room, but not in a vitiated atmosphere. You cannot do better than continue to give bicarbonate of soda at intervals, and between times, when not giving this, well colour its drinking water with Parrish's chemical food. Give it the regular seed mixture: Canary, oats, wheat, dari, small maize, hemp and sunflower seeds; with ripe fruit, plain biscuit, nuts, and a little boiled potato, dry. I should also advise the perch being placed quite low down in the cage, and the food hoppers the same, so that the shock may be less when it slips off the perch. Unless the bird has caught a chill owing to being in a draught, I don't blame the bath. If it is actually cramp, I should advise fomenting with a decoction of hot (not scalded) camomile flowers; dry with a cloth, and keep quiet and out of all draught. If it is really paralysis, I fear but little can be done for it, as each attack will become worse, and the end soon come. But we must hope it is not so serious as this. Please report progress shortly.

PARK & LAKE AVICULTURE

Answered by Frank Finn, B.A., F.Z.S., M.B.O.U., etc.

Management of Goldfish.

H. Morrison.—In managing goldfish, the great thing is to keep the water pure. Don't overcrowd. Your tank, 2 ft. by 1 ft. by 1 ft. deep, should not have more than four three-inch fish; less, if they are larger, though you could put in six two-inchers. Dip out some of the water every day or two, and put fresh in to fill up, but don't have more than eight inches of water in. Shallow water is best for fish. Put in a few large water-snails to act as scavengers. Keep the aquarium out of the sun. Feed on watercress, sprouting sprays of which, well provided with roots, will live floating for some time; also on dried ants' eggs—only just as much as they will eat daily. A few small worms and a little crushed vermicelli may be given, but nothing should be allowed to get stale. Water insects of small size, and water-shrimps, are good food. Your tank is small for breeding, but you might get them to spawn by keeping large sprays of water-weed in it. The males can only be distinguished in spring by a roughness on the cheeks, so these fish are hard to sex. If you get any spawn, remove the weeds, on which it is deposited, into another vessel, or the old fish will eat it.

GENERAL.

Answered by The Editor.

Chaffinch-Canary Mule (F. Harrison).—We published a letter from the present owner in our Correspondence columns some few months ago, calling attention to this bird. We believe our Mr. Weston has been written to by another correspondent this week. The bird has been exhibited several times without result.

Various Matters (H. R. Stone).—The term "flighted" is here used to denote a hen that is two years old, at least—i.e., that has moulted her flight feathers. Swansdown linings for nest-pans you can obtain cheaply from any of the fanciers' specialists advertising in our columns. The centre of the cage at the back is the place indicated.

Which Room (R. Manwaring).—1: We think the choice rests between the 2nd and 3rd room. If the latter (the attic) is cosy, and free from draughts, it should answer admirably, being quiet, and, as you say, fairly well lighted. Put the cages, of course, where they will best catch the light, whichever room you adopt. The living-room might not be quiet enough; but you are best judge of that. The "dullness" of a room would hardly kill any healthy bird in but a "few days." 2: Yes.

Photographs (J. Rukin).—Many thanks for the very successful photographs, for which we will try and find a corner in one of our supplements.

An Anecdote (G. Loosemore).—We receive on an average anything from a dozen to a score items every week, so it will be obvious to you that all cannot find a place in the Young Naturalist's column. "Uncle Peter" has to select those which seem, in his judgment, the most suitable. We will, however, look into the matter you mention.

A Hen and Her Foster-Children (Dan Bassett).—Items concerning poultry are not suited for our Young Naturalist's Column. Try again.

Officials (Novice).—It is usual to have one president, but the vice-presidents may be any number. Many societies call all these latter gentlemen simply "patrons," and there is much to be said in favour of the adoption of this course.

Social at Portobello (Leach and Leckie).—You will note that we had already received an account from a local correspondent, which was in type when yours came to hand.

Stamp for Reply (T. Atkins).—There is much to be said in favour of your point of view, we admit. Still, one cannot convince others against their will, and this matter was quite recently dealt with in our columns.

Allow me to congratulate you on the excellence of your paper, Cage Birds, writes Mr. E. Wm. Thornley (Bristol), which I look forward to weekly.

I would like again to express my continued delight in Cage Birds, writes Mrs. Francis B. Alexander (Greenhithe). I look upon Friday as my happiest day of all the week, and when evening comes have to actually halve the copy with my husband, although there are daily papers about. I have got you several new readers, who say it is splendid for all bird lovers. The plates are quite perfection. I wish Cage Birds every success.

Those keen judges of a good Plainhead, the fanciers of the city of Norwich, are very sweet on a young yellow cock-bird owned by Mr. W. M. Gaze, of Aldeby, and seem to have found it difficult to understand this bird's low position in the prize-list at the last Crystal Palace Show. Commenting on the fact in the "Eastern Evening News," the writer says: One journal connected with the Fancy described the bird as being grand in shape and substance, but inclined to be a bit browed. I accepted an invitation to view this specimen previous to his appearance before the public, my opinion being that he could hold his own with whatever company he met on the show bench. As regards the browing of a specimen, sometimes it may happen that the show cage may be responsible for a bird appearing at times a bit browed through the wires being so placed as not to allow the specimen to drink without disturbing his feathers. However, the owner of the Norwich ten-guinea champion should be in no way discouraged, as, should the bird be above ground next year, it will be plainly seen.

THE SHOWS.

(See also page 291.)

NEWPORT AND MONMOUTHSHIRE C.B.S.

The first members' matched pair show was held at Plimsoll Arms, March 5th. Entries were very good considering the time the club has been in existence. The quality throughout was of great merit, and the members are to be congratulated on the excellent turnout. The general management was all that could be desired. Messrs. Allen and Simmonds judged.

CRESTS: 1, Larcombe; 2, Maher; 3, Lewis. NOR.: 1, Larcombe; 2, 3, 4, and 1, 2, 3, spls, Barnes; vhc, Lynch; hc, Hitchings; c, Brown. YORKS.: 1, 2, Larcombe; 3, hc, spl, Edwards; 4, 2 spls, Hughes; vhc, 3 spls, Hayes; c, Brown. A.O.V.: 1, Larcombe; 2, Barnes; 3, Lowe. MULING PAIRS: 1, 4, Edwards; 2, Wyatt; 3, Hughes; extra 3, Lowe; vhc, Lodge; vhc, Maher; hc, Wyatt, Hughes, Smith; c, Hayes. MULES: 1, Larcombe; 2, Smith; 3, Lynch. —W. H. BARNES, Secretary.

CITY OF HULL C.B.S.

Monthly meeting held at headquarters on March 2nd, and also a table show for British birds, for which there were 56 entries in four classes. Mr. Harland judged. He has successfully bred and shown Yorkshires in the past, and by his awards in the British classes, he evidently knows how to sort the right ones out. Two new members were proposed, and Mr. Calam was elected as delegate to C.B.U. Some little surprise was expressed at the Leeds C.B.S. appropriating our Open Show dates, November 20, 21. We have kept to these dates for a number of years and have tried to avoid clashing. However we hope the Leeds friends will try and find a new date, so as to prevent the C.B.U. having to re-arrange matters. A very interesting discussion on "How and when to pair" was afterwards gone into by most of the members present, and I noticed several novice members taking mental notes, which should result in the Nest Feather Show having full classes.

HARDBILL (6): 1, Whiteside; 2, Calam; 3, hc, c, Pepper; vhc, Perkins. SOFTBILL (4): 1, Brumby; 2, Perkins; 3, Frith; vhc, Whitesides.—F. H. STAMFORD (Minute Sec.).

LOWESTOFT AND DIS. C.B.S.

The last show of season was held on March 2nd, at Fox and Hounds. Norwich Plainhead cocks were the variety chosen for this event and some beautiful specimens were staged in both sections. Members and entries turned up well (considering the bad weather) and a very enjoyable evening was spent. Mr. Hart again gave great satisfaction in picking out the winners. We noticed he had a difficult task, as some of the best were out. In the champion section, Mr. Kirk's variegated yellow headed the list; it was a real tip-topper and a general favourite. The winning buff also came in for a share of the praise; Mr. Nichols (the owner) was offered £5 for him, but refused. Other exhibits all worthy of special comment were staged by Messrs. Lang, Disney and Blackburn. The novices kept the ball rolling by bringing up a fine team, and we congratulate them on the quality and type of their selected stock for the coming year; if these are a sample, look out for the First Feather Show.

CHAMPION YELL. CK.: 1, Kirk; 2, c, Lang; 3, vhc, Disney; 4, Nichols; hc, Nichols and Blackburn. BUFF: 1, 3, Nichols; 2, hc, Disney; 4, c, Lang; vhc, Blackburn. LEICESTER AND LEICESTERSHIRE HAND-IN-HAND C.B.S.

Annual members' show was held on February 22nd, in the All-England Show Room, at the White Swan Hotel, Market Place. Mr. E. Fox (Long Eaton), officiated and his awards met with general approval. Competition was very keen, many birds that have stood the test of open competition turning up. Messrs. Needham, Kilsby, and Colver took specials for most points in show in each section. Mr. H. Smith was steward and had cards up and show open well to time.

CAMBRIDGE C.B.S.

The proceedings of the monthly meeting of this society took the form of a table show for Britishers and pairs for Hybrid breeding. The society having now offered silver and bronze medals to be competed for throughout the year, on the points system, the result was a largely increased entry, all the classes filling up splendidly, with the exception of that for Hybrids, and here a neat specimen of the Siskin-Greenfinch cross was shown by Mr. A. Hinson. The first prize card in the Goldfinch class fell to Mr. A. E. Edwards' bird, a rattling good Goldie, with a clean-cut blaze, whose only fault seems to be in lacking the rich "tanning" of the typical Britisher. Both the second and third birds were shown in beautiful condition. Special prizes were given by Councillors Starr and Arnold and Mr. R. Smith, and this was probably the most successful table show ever held by the society. Mr. F. Doggett and Mr. W. Linsey (in the classes where he was not showing) judged the birds, and their awards appeared to give every satisfaction. Previous to the judging it was resolved that the society become affiliated to the Cage Bird Union, and also that the next monthly night be devoted to a smoking concert.

GOLDFINCH: 1, Edwards; 2, Williams; 3, Hinson. BULLFINCH: 1, King; 2, Lambert; 3, Jeeves. HAWFINCH, ETC.: 1, Watson; 2, Linsey, Hawfinches; 3, McQuarrie, Greenfinch. LINNET, ETC.: 1, Lambert, Linnet; 2, King Siskin; 3, Linsey, Redpoll. BRAMBLEFINCH, ETC.: 1, 3, Lambert, Bramblefinch and Chaffinch; 2, Ridgewell, Chaffinch. A.V. HYRID: 1, 2, Hinson Siskin-Greenfinch and Greenfinch-Canary. PAIRS FOR HYBRID BREEDING: 1, Bye; 2, Rogers; 3, Edwards.—T. S. MOORE.

A YORKSHIREMAN AND A SCOTCHMAN.

CINNAMON MARKED YORKSHIRE. First Prize Crystal Palace Show for Messrs. Ogden Bros. (Bradford).

NATURAL COLOR NORWICH PLAINHEAD. First Prize Scottish National Show for Mr. A. Chalmers (Kirkintilloch).

WIBSEY AND DIS. C.B.S.

A members' show was held on March 14, at the headquarters, "The Horse and Groom Inn," Wibsey. Owing to the closeness of the breeding season the number of exhibits was not so large as is generally seen at our shows, but the quality was fully maintained throughout. Forty-eight birds were staged, and Mr. J. Wilman (Sandy Lane) placed the cards, to the full satisfaction of all.

YORKS. CL. YELL. CK.: 1, Ormondroyd; 2, Chapman and Bateman; 3, vhc, Crowther; hc, Wright. BUFF: 1, Crowther; 2, Bastow; 3, hc, Mann; 4, vhc, Norton; c, Taylor Bros. TICKED, ETC., YELL. UNEVEN, ETC., HEN: 1, vhc, Sutcliffe; 2, Bastow; 3, Taylor Bros.; hc, Ormondroyd; c Norton. YORKS. STOCK BIRD: 1, Thornton; 2, Crowther.—E. W. JOHNSON, Sec.

Have you given the notice respecting CAGE BIRDS' ANNUAL for 1908 your attention?

GREAT HORTON ORNITHOLOGICAL SOCIETY.

The second members' show for this season was held on March 14th at the meeting house. A good number of exhibits were staged. Mr. Wm. Cruise awarded the prizes and gave general satisfaction. Amongst the visitors was Mr. H. W. Battye, of Huddersfield, who came to see if we had any of those 7½-inch birds staged we have read so much about; but I don't think we had.

OPEN SECTION.—TICKED YELL. YORKS.: 1, Waterworth; 2, 4, hc, Young; 3, Mann; vhc, c, Lister. BUFF: 1, Brayshaw and Jowett; 2, 3, Self; 4, Blakey; vhc, Young; hc, Waterworth. CINN. BUFF: 1, Hargreaves.—JAS. HOLROYD, Sec.

[Kindly write on one side of the paper only.—ED.]

PATELEY BRIDGE AND DISTRICT F. AND F.S.

The second annual show of the above society held on March 14, at the Oddfellows' Hall, proved a great success. Entries were numerous and quality throughout was excellent. The cage bird classes were a source of much interest and attraction. The Sec. is Mr. W. Lawson, to whom considerable credit is due for his careful conduct of affairs.

YORKS. CL. YELL. CK. (6): 1, Pullan; 2, J. W. Brown; 3, Shuttleworth. BUFF (5): 1, spl, Richmond; 2, Barfe; 3, Pullan. MKD. ETC. CK. (5): 1, Knibbs; 2, Barfe; 3, Richardson. YORKS. HEN (5): 1, J. W. Brown; 2, Pullan; 3, Shuttleworth. NOR. (1): 1, Richmond. BREEDING PAIR (4): 1, Richmond; 2, Shuttleworth; 3, J. W. Brown.

RUGBY AND DISTRICT C.B.S.

A members' show was held at the Castle Auction Rooms on March 10th, when, considering the lateness of the season, a very good number of birds were staged. Mr. T. G. Hough placed the cards, and gave general satisfaction.

NOR. CK., YELL.: 1, spl, Leng; 2, Brooks; 3, Savage; vhc, Westley. BUFF: 1, Leng; 2, Savage. HEN, BUFF: 1, Leng; 2, Savage; 3, Brooks; vhc, Jennings. A.O.V. CK. CAN.: 1, Westley. HEN: 1, Webb. MATCHED PAIRS: 1, Brooks; 2, Towers. GOLDFINCH: 1, spl, Skipwith; 2, Westley. A.O.S. BRIT.: 1, Skipwith; 2, 3, Clarke; 4, Westley; vhc, Brooks; hc, Fann and Labraham. £1 SELL.: 1, 4, Towers; 2, Hands; 3, Bushwell; vhc, Skipwith; hc, McMicken. 10/-: 1, Hands; 2, Westley; 3, Boseworth; vhc, Towers; hc, Clarke.—C. F. SAVAGE.

LEWISHAM AND DISTRICT C.B.S.

The society held their first pair stock show at headquarters, the Rochuck Hotel, Lewisham, on March 3rd, when Mr. J. Robson judged. The exhibits, numbering 39, were well staged, and many of them were birds of exceptional merit. Both the Yorkshire and Norwich Plainhead classes were well filled, and provided some very keen competition. The Norwich would possibly have shown to better advantage if they had been exhibited in double cages, as, being late in the season, many were in a very forward condition. Crest and Crestbred Muling and Hybrid pairs might have been improved upon both as regards numbers and quality, but all were shown in faultless condition, the exhibitors having shown good judgment in their selections for mating.

YORKSHIRE (11): 1, spl, 2, vhc, Edwards, a grand team, the 1st pair birds of splendid quality, both typical show specimens in lovely condition, run very close by the 2nd pair, another grand couple; 3, c, Pitcher and Fann, two fine pairs, hardly so well up or clean cut away, both pairs splendidly matched; hc, Males. NORWICH (9): 1, spl, 2, vhc, Bellinger, another grand team, 1st pair well away from any in class, in grand form, full of quality and type, 2nd another fine pair; 3, Lneg, both good pairs; hc, Sullivan. YORKS. NOVICE (4): 1, spl, 2, spl, 3, Scott, three good exhibits, well matched, shown in capital condition; vhc, Wraight. NOR. (4): 1, spl, 2, Wraight, two fine typical pairs, good quality, well shown; 3, vhc, Phillips, 3rd close up, very typical pair. CREST AND CRESTBRED: 1, Stevens, nice exhibits. MULING (5): 1, Wall; 2, Lugg; 3, Steed; vhc, Dowling. HYBRIDS (4): 1, spl, Phillips; 2, vhc, White; 3, Stevens. SELL. PAIRS: 1, Wall. Seven new members were duly elected, and a very pleasant evening terminated with a vote of thanks to Mr. Robson for his kindness and patience in answering the numerous questions asked him.—H. THOS. LUCAS, Hon. Sec.

SINGING CONTESTS.

LEEDS.

Weekly Linnet singing contest was held at King's Head, Shannon-street, on March 14th, when 20 birds sang. 1st prize, T. Summers; 2nd and 3rd shared by C. Biss and T. Stead. Judges, S. Hardcastle and G. Towers. Also on March 15th, when 30 birds sang. 1st prize, T. Johnson; 2nd and 3rd shared between C. Biss and S. Hardcastle; 4th, T. Summers. Judges, T. Hineson and C. Cooper.—T. SUMMERS, Hon. Sec.

YORK.

Usual contest at the Bricklayers' Arms, Palmer Lane, Hungate, March 14, when thirty birds faced the judge. Result:—1, Kendray; 2, 5, A. Chaplin; 3, Asheroft; 4, Moley Wark; 6, Evans; 7, Lightfoot. Judge, Mr. T. Raver; timekeeper, Mr. T. Limbert.—WM. EMPSON.

Usual contest held at "Crown Inn," North Street, March 14, when 30 birds sang for seven prizes. The following were the principal prize-winners:—1, Stothard; 2, 4, Horwell; 3, Lee; 5, Bean; 6, Lambert; 7, Massheder. Judge, Mr. W. Perry; timekeeper, Mr. J. Firth.—J. W. SMITH, Secretary.

SHEFFIELD.

A Linnet singing contest was held at the Don Inn, Carbrook, Sheffield, the contest being for two minute hangs. The prize-winners were:—1, Booker, 53; 2, Knight, 42; 3, Knight, 39. Judges, Messrs. Ballington and Brown.—H. TIMMS, Secretary.

BLACKBURN.

The Blackburn Linnet S.A. held week-end contest for quality singing on March 14 at club headquarters, Old Red Lion, Snig Brook, Blackburn. The winners were:—1st prize, Topping; 2nd, Rostron; 3rd, Harrison. Judge, W. W. Rench; timekeeper, R. Topping.—R. HAYHURST, Secretary.

The first club and cup sing in connection with the Blackburn and Dist. L.F.A. was held at the Good Samaritan Inn, Grimshaw Park, on March 14. That good old veteran, Jesse Hunt, once more came out with flying colours, his old bird doing 9.33. After the contest thirty members sat down to a good potato-pie feast, provided by Mr. D. Bentley, to which all seemed to do full justice. This was followed by toasts, etc. Our President (Mr. David Bentley) presided, and a right good and merry evening was spent. Songs were given by Messrs. R. Airey, Bentley, and Sheffield, and recitations by Messrs. Jesse Hunt and J. Walmsley. A vote of thanks to the chairman and the the host ended a most enjoyable evening.—JOHN SHEFFIELD, Sec.

DARLINGTON.

A Linnet singing contest will be held at Mr. Brownlees's "George Hotel," Darlington, on Saturday, March 28th. Two prizes, copper kettle and silver medal. First bird up at 2.30 p.m. prompt. Entrance fee 6d. per bird.—(Advt.).

ELSECAR.

The Elsecar S.S. held usual week-end contest on March 7 at Barley Corn Inn, when 17 birds competed for three good prizes. The prize-winners were: 1, W. Lofthouse, 3.45; 2, T. White, 3.42; 3, S. Vaines, 3.17. Mr. W. White was called on to mark for W. Lofthouse's bird. Timekeeper, Mr. J. Denton; marker, Mr. W. Lofthouse.—E. CHARLES, Secretary.

FANCIERS' FESTIVITIES.

Skelmanthorpe C.B.A.

A special meeting of a delightful character was held on March 10th in honour of three of our members who have been successful in winning their respective competitions, viz: Messrs. W. Wadsworth (Ramsden's Challenge Cup, which carries with it teapot and gold medal), J. Helliwell (Brotherton's Cup and Ramsden's teapot), and H Lodge (Novice Gold Medal), which we think in design excels all novice medals previously presented. After inspecting the magnificent trophies, we took our seats and did justice to the choice variety of good things provided for the occasion. As our society is neither favoured with talented vocalists nor public orators, after having fully gratified the desires of the inner man the rest of the evening was devoted to a smoking concert. Several interesting topics were freely discussed, mostly relating to the Fancy. During the evening one thing was mentioned in particular and evoked a spirit of severe criticism. This was that so few of the societies in connection with our Union were represented on the show bench at our annual show. Interesting games were freely indulged in. Mr. Dyson gave expressions of his humour by reciting his old favourites. Toasts having been proposed to the successful competitors, an evening long to be remembered by those present was brought to a close.—J. Lodge, secretary.

Liverpool Bird Fanciers' Annual Dinner.

The annual dinner under the joint auspices of the Liverpool Bird Breeders and the Green Canary Association was held in the Milbourn Assembly Rooms, St. Anne's Street, Liverpool, on March 3rd. The President of the G.C.A. G. R. Johnson, Esq., presided, and letters of apology were read from Councillor Muirhead and John Henrickson, Esq., patrons of the Green Club. The President of the Breeders, R. Bolton, Esq., was also unavoidably absent. After an excellent repast had been done full justice to the President presented the prizes in connection with the Green Club's season's competitions, and congratulated the members on the handsome list of specials they had had in competitions also saying a few well-chosen words to each recipient. Mr. Ryno, on being presented with the Norwich Champion Cup, said he was getting quite used to the game of receiving cups; they came quite as a matter of course, whilst the President, on presenting Mr. Deacon with his sixth prize of the evening, remarked that he was quite tired of seeing him come up so often and taking away so many beautiful prizes. Mr. Deacon, in thanking the President for his kind remarks said that he would have much pleasure in presenting the Norwich Novice Cup for next season's competition. The company showed their appreciation of Mr. Deacon's generosity in no half-hearted fashion. Mr. Clayton (Halifax) wrote regretting his inability to attend (through illness) to receive his cup, but sent a handsome donation to next season's cup, also towards the refreshment fund. This latter, whilst not compensating for Mr. Clayton's absence, certainly helped the members to (?) drown their sorrows. A new feature in connection with these presentations was the attendance of a lady (Mrs. Harrison, Altrincham), who made her curtsey to the President on being presented with the two specials won by the absent Tommy. Mrs Harrison got a grand ovation, but very prettily declined to make a speech. A very notable absentee was the always smiling and popular Mrs. Ryno, wife of the member for "Cash" and friend Tommy had a lively time answering the expressions of regret at her absence. After the presentations, Mr. Handley took the chair, the President having to leave to catch his train home. The toast list was then proceeded with. Mr. Metcalfe proposed "The Breeders," to which Mr Handley suitably replied. Mr. Barratt proposed "The Prize Winners," and this was replied to by Mr. Deacon. "The President" was responded to by the singing of "He's a jolly good fellow." Mr. Isaac (treasurer) proposed "The Green Canary Association," and said how much pleasure it gave him to be associated with such a popular and growing society; he wished the society every success it deserved. The secretary Mr. S. Halwin, in replying, gave a sketch of the year's working, pointing out that something like £40 had been in competition during the year, and that the patronage had been given to a larger number of shows and more widely spread than in previous years. After the toasts had been duly honoured, a capital musical programme was gone into. Mr. and Miss Crellin and Miss Gilbert very ably supplied the piano and violin parts, and the vocal parts were opened by the old veteran, Tommy Ryno, telling us how the "Village Blacksmith" sat in the "old arm chair"—a turn always eagerly anticipated at these gatherings. Mr. Billy Hales gave a capital rendering of "The Old Brigade," and looked the part to perfection. It was very amusing to see all the men making towards the piano when Miss Gilbert sang "Love me, and the world is mine"—a repetition being loudly called for later in the evening. The same lady also sang a "A Dream of Home," a lot of the fellows remarking they wished there was not so much "dream" but more of the "reality" about it. Mr. A. Thompson made the shillelagh rattle and the feet jingle with "The Christening." Mr. Goodman, thinking the company getting too frivolous gave a good rendering of the "Miserable Man," and Mr. Seaton Milroy brought tears to every eye by the pathetic manner in which he recited the little Emily's letter scene from "David Copperfield," afterwards raising every hair on every head in the room by "Svengali." A very enjoyable dance, lasting till 2 a.m. brought the most successful gathering ever held in Liverpool to a happy close. Amongst those present we noticed: G. R. Johnson, Esq., President; Mr. and Mrs. Metcalfe Mr. and Mrs. Handley, Mr. and Mrs. Barratt, Mr. and Mrs. McMartry. Mr. and Mrs. Harvey, Mr. and Mrs. Slater, Mr. and Mrs. J. Walker, Mr. and Miss Hadwin. Miss Harding Mr. and Mrs. Baker, Miss Robinson, Mrs. Harrison. Miss Casey (Altrincham) Mr. and Mrs. Brabertou Messrs. F. E. Hawkes W. Walker Crooks, J. H. Isaac. W. Hales. Thornton. W. R. Johnson. D. Young, Braithwaite, senr. and junr., Rowlands, Dixon. F. J. Isaac W. Thompson, A. Thompson. Deacon, Ryno, Gore, H. Humphreys, Espley Slater, Beattie, Rogers, and Seaton Milroy.

Nottingham and Notts Ornithological Society.

The annual dinner was held at the Welbeck Hotel, Nottingham, on March 4th, when 40 members and friends of the society assembled to do justice to the good things provided. Mr. R. Rhodes occupied the chair and Mr. G. C. Ley the vice chair. Amongst others present were the following:—Messrs. Alton, Burrows, Bemrose, T. Barker, J. Bertie Cutts. Cottingham, J. Goode, A. E. Carton, E. Hampston, Hill, Holmes, Kerry, J. H. Northage, J. Onion, A. Onion, A. Onion, junr., J. S. Smith, J. H. Scothern, W. Vardy, G. White, W. Wolfe, and G. E. Wilkinson, the secretary. The Chairman submitted the toast of "The King" and "The Society," Mr. G. C. Ley "The Donors and Subscribers" Mr. J. H. Scothern "The Fancy," and Mr. J. H. Northage "The Visitors." A very attractive musical entertainment had been arranged, to which Messrs. A. Ogen and J. Harrison contributed, sharing between them the honours at the piano in addition to rendering each several songs, which met with the very hearty appreciation of those present, as did the songs contributed by Messrs. J. Asher, W. C. Gillott A. Nisley, and G. C. Ley. all of whom contributed in a very pleasing and acceptable manner to a programme of exceptional merit. Mr. J. Bemrose also rendered a clarionet solo, which was also much appreciated. The gathering was one of the most enjoyable in the history of the society.—G. E. Wilkinson, secretary.

Portobello Cage Bird Society.

In the Masonic Hall, Tower Street, on March 9th, the members met for a social hour or two, and to do honour to their late secretary, Mr. John Bell. The chair was occupied by the genial President, Mr Matthews, who opened the proceedings with a few appropriate remarks. Mr. Dunn, vice-president, who was entrusted with the event of the evening, in a few well chosen words said it gave him great pleasure on behalf of the members to present their late Secretary with a handsome oak timepiece as a mark of the esteem in which he was held and in recognition of the services he had rendered to the society, which by his efforts had risen to be one of the foremost in the district, if not in Scotland. Mr. Bell feelingly replied thanking the members for their kindness, the company singing "For he's a jolly good fellow." Mr. Miller proposed the toast of "Kindred Societies," and in a racy speech full of sparkling humour, said he was pleased to see so many representatives from the neighbouring societies. Mr. Jas. Winter, secretary of the Scottish National, replied on their behalf. The toast of the 'Fancy Press" was given by Mr. Leckie, to which Mr. E. G Wright replied. The company being rich in musical talent, the harmony was well sustained. Mr. W. Gibbon, in his rendering of "We parted on the shore" and "Mary, my Scotch bluebell," was doubly encored. Mr. Davis (comic) gave two songs in character. The others contributing songs were Messrs. Bolan, Bett, A. McLean. MacGibbon, and Jenkins, Mr. Cairns favouring the company with two violin selections. Mr. May presided at the piano. A hearty vote of thanks to the chairman brought a very happy evening to a close.—Geo. Brown.

Stockton-on-Tees & District C.B.S.

The members met on February 25th at Tate's Café, the occasion being the annual dinner and smoker. Over 25 members and friends sat down to dinner, which was served in the very best style by Mr. Tate. After a good set-to at the tables, we laid ourselves out for a good evening's amusement, the arrangements for which were in the hands of Messrs. Nicholson, Bean, Freeman, Acheson, Lowes, and Burton. Mr. Bean occupied the chair, and several toasts were submitted. Mr. Carr proposed the "Stockton-on-Tees and Dis. C.B.S." in a very good speech, in which he said he hoped a good feeling would always prevail amongst members. The Secretary, replying, said he would always do his best for the society as long as he was a member. He presented the balance sheet with a balance in hand of £15—not bad for a young society. Mr. Marwood proposed "The Visitors." Mr. Hope replied and said they were always ready to help the society, and he hoped they would be there again on some future occasion. A vote of thanks to the chairman by Mr. Nicholson brought the evening to a close one of the best we cage bird fanciers have spent.—J. W. Lowes.

City of Bradford O.S.

The annual dinner and social evening was spent at headquarters the Flying Dutchman, on March 14th. Seventy persons sat down to an excellent repast. Mr. T. Forman presided in a very genial manner. Members' prizes for 1907 were presented by Mr J. S. Clarkson to the successful exhibitors. Open classes: 1st, F. Ludbrook (82 points); 2nd S. Lingley (79 points; 3rd, P. Stansfield (66 points); 4th, Whartons Bros. (53 points). Novice section: 1st, T. Fortnam (95 points); 2nd, E. W. Pollitt (73 points); 3rd J Horsfield (53 points; 4th, W. Helliwell (38 points). Mr. E. W. Pollitt is leaving this country on March 27th. He responded by wishing the society every success, and said he would not forget the society if he was at all successful in the new country. An excellent programme was gone through. Songs were sung by Miss C. Leach (soprano), Mr. J. H. Hawley (humorist), and Mr. Denninson (baritone). Mr. W. Croft officiated at the pianoforte. Mr. F. Ludbrook proposed a vote of thanks to the artistes and the host and hostess. Mr. Hirst seconded. The host responded, and wished the society every success. This brought a very pleasant evening to a close.—F. Rhodes, secretary.

Cheltenham C.B.S.

The annual supper was held at headquarters, the Sydney Arms Hotel, on February 12th. The president, Mr. W. W. Theobald, occupied the chair, and was supported by Messrs. Grant (vice chairman), T. J. King, (Kilmister) Hiles, Hamlin, Hope and a large number of members and friends including Messrs. Payne and Houghton, of Gloucester. After supper a very enjoyable time was spent. A brief toast list having been duly honoured, the evening was devoted to a concert. During the interval the President on behalf of the members presented the Hon. Sec., Mr. A. S. Treasure, with a purse containing £5 and the following letter: "We the undersigned do hereby convey our best thanks to you for the able manner in which you have carried out our interests, and brought the Bird Society to such a successful issue; you will perceive by this, that you have our best wishes for your present and future welfare." The list of subscribers included a donation from the Gloucester C.B.S. Mr. Treasure in returning thanks, said how much he appreciated the kindness of all the subscribers, and especially how he valued the good feeling and fellowship which had prompted the getting up of the testimonial, which had been a great surprise to him.

Darlington C. and B.B.F.A.

A smoking concert was held at "The George Hotel" on February 19th, when there was a large attendance of members and friends, including Messrs. H. Brownless and R. Graham, vice-presidents. Mr. Cuthbertson, chairman, occupied the chair, and in his speech mentioned the objects of the Association, stating that it was only in its infancy, having been formed in April of 1906. Two Open Shows had been held, and he was pleased to say that they had both been carried out successfully, as after paying all prize money and expenses in connection with each show, we had a balance in hand. He was pleased to say that the balance sheet for last year showed us to be in a good position, as we had a balance to the credit of the Association of £9. He said he thought it was a credit to the members to have such an amount in hand, having only been in existence for such a short time. He was also pleased that two of our members, Messrs. W Lismith and Hawkins, had had the honour of winning a first prize at the Crystal Palace with their Starling, and also a v.h.c. card with a Linnet in a class of 30. During the evening the President, Mr. H. Pike Pease, M.P. (Member for the Borough), presented the Secretary, Mr. R. S. Black, on behalf of the members, with a handsome dressing case, for the way in which he had carried out the duties of secretary since the Association was first formed. Mr. Pease said he was very pleased to hear the speech which the Chairman had made, and congratulated the members on the position of the Association. He was a fancier himself, and thought that every man should have a hobby of some kind, as he thought that when a man to occupy his spare time with, things fell very hard to retire from his business and had nothing heavily on his hands, whereas if he had a hobby of some kind he could always fill in his spare time. It would also be a pleasure to him to attend to the wants of his particular fancy. Mr. Pease congratulated us upon having two such fanciers amongst us as Messrs. Wildsmith and Hawkins, and thought it was a great credit to them in taking such high honours at the Crystal Palace Show. He hoped that they would have the same success in exhibiting at future shows. The Secretary replied in a suitable manner, and thanked the members for making him such a handsome present. Messrs. Simpson, Wildsmith, Black (senr.), and Felson also spoke. The rest of the evening was spent in harmony, the following contributing to same:—H. Barwick, J. Cuthbertson, J. P. Cuthbertson, J. O'Connor, J. Martin, J. McLeish, T. Oliver, and W. Wennington. H. Barwick and H. Hawkins were the accompanists. The singing of the National Anthem brought the very pleasant evening's enjoyment to a close, the whole of which was thoroughly enjoyed by all present. R. S. Black.

BRADFORD (EAST) O.S.

Hints to Yorkshire Fanciers.

A good number of members turned up at Park Chapel School on March 3rd, to hear Mr. R. Halliday's lecture on "Hints to Yorkshire Canary Fanciers." We were well repaid by hearing one of the most useful and instructive lectures it has been our lot to hear. Mr. Halliday dealt with all the most important phases in connection with the breeding, moulting and exhibiting of Yorkshires, and gave freely of the knowledge that he has acquired during the years he has been a breeder and exhibitor of this variety. Dealing first with the room and cages, he gave many causes for failure; where the cages are facing a direct light, for instance, when a hen has been sitting and some object has flitted past the window, and perhaps scared the hen off the nest. Things like these seem paltry, but when we come to study the matter, it was mostly these little things that made all the difference between success and failure. A good plan to prevent an occurrence such as this, is to put a piece of cardboard in the wires, directly opposite the nest, to shield the hen whilst she is sitting. I have tried this myself, and have found it to answer very well. The lecturer then gave some good advice on the selection of stock, and urged upon all to use their very best judgment in their selections, as this was one of the most essential stepping-stones to the coveted goal. He also laid special stress on getting the birds into proper condition before pairing up, as, if we neglected this most particular item, it was likely to end in disaster. Turning from this point, he advised all to try and get the confidence of their birds, as they could then take far more liberties in the breeding-room than they could otherwise, but on no account must you betray that confidence once you have attained it. The lecturer said he would like all those present to try and copy a few lessons from the British bird fancier, as it was remarkable how soon they could tame a bird that had been in its wild state. This reminds me of a visit I paid quite recently to one of our British bird fanciers in the Bradford district, one who is undoubtedly a master hand at taming wild-caught birds, and nearly every variety that he had in his room would come and take seed out of my hand, and this visit created a desire on the part of one fancier to try and do likewise. Mr. Halliday then cautioned us about pairing up too soon, and said that he thought the first week in April was plenty soon enough to begin operations, as he did not think that the young ones which came as the result of pairing up too soon were the most desirable. After describing his method of feeding, etc., during the time the hen is sitting, he dealt with the young birds, and here Mr. Halliday advocates crushing the seed for young birds when they are taken away from the parents, and trying to get them on to hard seed as soon as possible, his reasons for this being, that he thinks that by crushing the seed for them they get on to the staple diet gradually, and thereby gain strength much quicker than by giving them so much egg food. The lecturer then dealt with the moulting and colour-feeding of birds, and said that this was a most critical time in the bird room. Every care should be exercised, to keep the birds free from all draughts and colds. Good sound food only should be given at this period, along with the best colour feed we could buy. Whilst dealing with the question of colour I would strongly advise every fancier to try and breed for it, as this, combined with the use of artificial colouring in the shape of colour-food, was the result of birds being put down with that rich colour and bloom which everyone desired to see on the show bench. Mr. Halliday then gave his method of washing birds for exhibition, and many expressed their satisfaction of his idea. The lecture was then brought to a close. Many questions were put, and were all answered to the satisfaction of those present. A hearty vote of thanks to Mr. Halliday for his kindness was afterwards proposed by Mr. Lightowler, seconded by Mr. Cowgill, and supported by Mr. Cruise, and this brought a most instructive evening to a close.—H. Hirst, Secretary.

READING AND DISTRICT C.B.S.

Monthly meeting held on March 4th at Palmer Hall Market. There was a large attendance, which included two members from Guildford and one from Thatcham. Three new members were elected—Messrs. Read and Oliver, of Guildford, and Mr. Brooks, of Reading. A fine instructive washing display was given by an old friend, Mr. Yates, who was afterwards accorded a hearty vote of thanks for his kindness.—C. A. Charles, Sec.

A SPECIAL OFFER.

To Users of Fluid Beef and Meat Extracts.

We invite the readers of "Cage Birds" to test for themselves the advantages of the new preparation for making Beef Tea, Gravies, Soups, etc., called Fluid Ju-Vis. Fluid Ju-Vis is Beef strengthened and vastly improved in flavour by the addition of Vegetable Extract. Fluid Ju-Vis is solely a Beef and Vegetable product and contains no adulterant whatever. In Fluid Ju-Vis you get about double the usual quantity for the same money and we are satisfied that you will decide that it is at least equal in quality and flavour, to any Extract you have used. To make Gravies, Soups Beef Teas at half the usual cost and like the better appeals to every one.

A 2 oz bottle of Ju-Vis can be bought of Grocers for 6½d., or send 6½d. stamps for a bottle to G. Foster Clark and Co., Maidstone.

A record crop of One Ton of Onions was last year grown from a 1s. Packet of our Leamington Giant Onion Seed, and this year we are offering £100 for the best Onion grown from the same seed. There will be 60 other prizes. Particulars with all 1s. and 2s. 6d. packets.

ROGERS, Seedsmen, Dept. A Leamington.

UNDER THE WHITE ROSE.

THE Norwich Plainhead Club, which has been talked so much about in Bradford and Yorkshire generally, has now been brought to a successful issue, the meeting convened at the Market Tavern on Saturday last having brought about this desirable end. The membership radius has been left open for the present, as some think this should extend beyond Yorkshire, but the promoters do not wish in any way to interfere with any existing club, their sole object being to promote the breeding and exhibiting of the Norwich Canary generally.

A point which had a lot to do with the formation of the club was the problem of what to do with the novices who had been enlisted in this variety by the introduction of Novice Norwich Classes at Yorkshire Union shows. It was felt that so few shows would provide open classes (unless something was done to assist them) that those who had taken the Norwich up would not stick to the bird if they could not exhibit without sending their birds to outside shows. The British Bird Club has shown what can be done, and very little fear as to the success of the newest offspring is anticipated—to make 36 members at an inaugural meeting speaks well for the enthusiasm of the promoters.

THE discussion on the length of the Yorkshire ended in favour of the present standard being adhered to. All present were confirmed in the belief that a bird 6¾ ins. in length, with all other properties combined, is quite enough to work upon, and that few, if any at all, at the present time are up to the standard length, the majority being under that length. It is certain that nothing will be done in Yorkshire circles to attempt to alter the standard in any way.

HUDDERSFIELD O.S. are considering the question of withdrawing from the Yorkshire Union, the reason being non-support of their shows by the Union members. They have been very hard hit certainly with their last few shows, but the question comes, What are they going to do if they leave? Will it be a case of "out of the frying-pan into the fire?"

GREAT Horton and Wibsey each had members' shows on Saturday last, and both were fairly well patronised. Bradford City O.S. held their annual dinner and social. About 70 members, with their wives and friends, sat down to the repast, and spent a convivial evening amid the best of good fellowship.

AN interesting subject in connection with the C.M.Y.C.C. is likely to be brought forward at no distant date, and I take the liberty of broaching the subject in this column so that those interested can study the thing over and then air their views when the time is ripe for the discussion. The point is: Should Cinnamon Ticked birds be shown along with the marked birds, or should they be shown in the ticked classes? In some people's minds there is a thought that the ticks should not, but that the classes should be for marked birds only, as the object of the club is to propagate the breeding of marked birds, and not ticked ones. The ticked birds are with us, however, and will have to be provided for somehow. Where?—that is the problem.

"STRAIGHT 'UN."

THE YOUNG NATURALIST.

Prizes of 1s. and two of 6d. each will be given each week for the best three anecdotes about birds written on postcards. Competitors must be children under sixteen years of age, and must state from where stories are taken.
Two stars indicate the Winning Contribution; one star the runners up.

* Fat and Juicy.

A Jackdaw that had been made a great pet of by a lady, often sitting on her shoulder and eating from her mouth, one day flew into the room, and, perching on her shoulder in the usual way, dropped a fat green caterpillar into her mouth, no doubt thinking he was giving her a choice tit bit. It was very kind of him, but the gift was not appreciated as it ought to have been.—J. Terry, age 15, 29, Benson Road, Croydon.

Illuminated Nests.

The birds that build hanging nests are at Cape Cormorin numerous. At night each of their little habitations is lighted up, as if to see company. The sagacious little bird fastens a bit of clay to the top of the nest, and then picks up a firefly, and sticks it on the clay to illuminate the dwelling which consists of two rooms. Sometimes there are three or four fireflies and their blaze of light in the little cell dazzle the eyes of the birds, which often kill the young or chase birds. Taken from "Familiar Birds" by H. G. Adams. Sent by J. C. Milcott, (ago 11 years), Arundle Drive, Westfield Road, Mansfield, Notts.

** That Imitative Jay.

My friend has a Jay, a very saucy fellow. This Jay is now about two years old, and his name is Tommy. He has been taught to say almost anything. He will imitate cats, dogs, chickens, and even human beings. He is let out of his cage every morning for about half an hour, and he hops about the garden in search of something to eat. His food consists of bread and butter and bits from the table. One morning we were surprised to hear the call of "Mabel, dear, are you coming out?" Thinking it was a friend we went into the garden to discover who it was. When we came back we found it was Tommy imitating some children over the wall. One day we quite forgot to feed him, and he at once began to shout "Tommy wants his dinner." We fed him, and we have never forgot to feed him since.—Sent by May Walton, ago 11 years, 14, Abney Street, Leicester.

A Docile Cormorant.

A Cormorant, kept by Colonel Montagu, was extremely docile. It was taken by surprise under the banks of a rivulet running into the British Channel by a Newfoundland dog. After it reached the Colonel it refused all food offered it, and food had to be crammed into it, to keep it alive. The Colonel having retired to the library, after seeing the bird fed, was surprised in a few minutes to see it walk boldly into the room. It unceremoniously placed itself by him at the side of the fire, and began to dress its feathers. This practice it continued till removed to an aquatic menagerie. Taken from "Scholar Library." Sent by J. Weighell, 31, North Terrace, Bedlington.

HEALTH & STRENGTH
Deals with all kinds of Athletics, including **Football, Wrestling, Boxing, Weight-Lifting, Fencing, Running, Ju-Jutsu, Gymnastics** of all kinds, **Swimming, &c., &c.** Gives free advice on all questions of Health, Diet, &c., to all readers.
EVERY THURSDAY, 1d. Sold Everywhere.
Get a copy to-day, or send for Free Specimen to "HEALTH AND STRENGTH," 12, Burleigh St., Strand E.C., mentioning "C B"

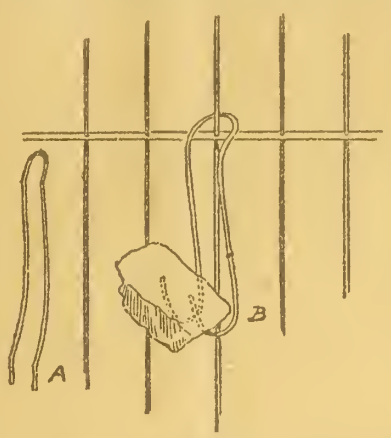
ILLUSTRATED IDEAS

Under this heading we shall illustrate weekly some ideas useful to the bird-keeper. Readers are invited to send us particulars of any novel and practical appliance of use in our hobby, either in cage, bird room or aviary, with a rough sketch of same where possible. Every "Illustrated Idea" used in this column will entitle the sender thereof to a postal order for two shillings and sixpence.

No. 189.
AN EASILY MADE APPLE, ETC., HOLDER.

Sent by W. H. Huxley, 1, St. Thomas's Pathway, Queen Street, Chester.

The enclosed sketch shows a holder for apple, carrot, etc., which I have had in use for six months now. It is simple and efficient. It is made simply of a lady's hair pin, bent as in Figure A, and placed in a convenient position, as in Figure 3. The apple or carrot is pressed on the turned up points from the inside of cage, and there you are. It is neither elaborate nor costly.—W. H. HUXLEY.

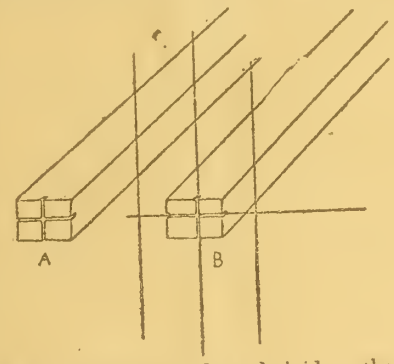


No. 190.
FIXING PERCHES ON WIRE FRONTS.

Sent by W. Crook.

Will Sender Communicate his Address?

Enclosed sketches show a method of cutting the ends of perches, so that the perches remain perfectly steady and rigid on the wire front of the cage. No explanation is needed, as a glance at the illustrations will tell the fancier all that is necessary. The perches can easily be removed by just pulling the wire front out of the grooves.—W. CROOK.



CORRESPONDENCE.

A SUGGESTION re PRIZE CARDS.

SIR,—Having noticed Mr. W. P. Jones' letter re the above, I think that there is a better kind of prize-card used by some societies. For instance, the small slips, 2½ inches by ½ inch, gummed at the back for sticking, on the front of the show cages is about the best I have seen. This kind was adopted by the Porth C.B.S. at their last show. The prize-cards (the large, ordinary ones) were sent with the prize-money; therefore the cards were clean for exhibitors to keep in their bird room for anyone to see. But when they are stuck in the wires of show cages at some of our shows, as Mr. W. P. J. says, you cannot see the birds; and I consider this a very poor plan. If Mr. W. P. J. is living anywhere near here, it will pay him to visit our next show, and if he should enter any birds in the show to be held on December 2nd and 3rd, he will see some of the finest ornamental prize cards that any exhibitor has ever seen. The society has paid a good figure for about 500. These are the prettiest cards ever printed. If Mr. W. P. J. will furnish me with his address I will send him a sample of the small gummed slips.—ARTHUR H. C. LEGG, 44, Primrose-terrace, Llwyncelyn, Porth.

ROLLER CANARIES AT THE PALACE SHOW.

SIR,—In answer to Mr. Norris, in last week's issue, I enclose you a copy of the letter that has been sent him direct by me. His views and my own differ so much that I wish every fancier to pass his own judgment.

W. WHITTAKER.

[COPY.]

Bolton, March 14th.

Dear Mr. Norris,—I see in CAGE BIRDS to-day you state I had not replied to your last letter. How came you, then, to return my money, as per your letter of the 10th inst? I will ask you a few more questions. Who is the mysterious member that accepted my challenge, and when did he put his money down; also how comes his final offer, when he has never made an offer at all? Am I not even to know his name? Why did he not make that offer to me? I put it in plain English, both in my letter to you, and in the Fancy Press, that there must be a side bet or no match. Why, then, do you ask me to turn on my own words, and sing for the funds of the club? Just one more very interesting question, Mr. Norris. How could I arrange and pick my own judge from March 6th to the 10th, when I knew not who would be at the meeting, or who the mysterious man was who was going to put his birds against mine? Why have you taken the whole thing upon your own shoulders? Finally, I must admit that I have not had a college education, but if any unbiassed mind can make it out that I have "wanted it all my own way," then I must have forgotten all that I ever learned.

W. WHITTAKER.

THE BULLFINCH: AN APPRECIATION AND A PLEA.
